A
COMPARATIVE GRAMMAR
OF
SOUTH AFRICAN LANGUAGES,

BY
W. H. I. BLEEK, PH. D.

PART II.
THE CONCORD.

SECTION I.
THE NOUN.

LONDON:
TRÜBNER & Co., 60, PATERNOSTER ROW.
1869.

CONTENTS OF PART II.—SECTION I.

	PAGE.
Preface	xix
B. THE CONCORD.	
I. The Nature of the Concord §	398—425
1. In general	398—404 93
2. In the Bâ-ntu Languages	405—420 96
3. In the Hottentot Language	421—425 112
II. Etymology of the concord-indicating Derivative Particles of the Nouns	426—447
1. Etymology of the Bâ-ntu Derivative Prefixes	426—443 123
2. Etymology of the Hottentot Derivative Suffixes	444 & 445 133
3. Analogies	446 & 447 137
III. The Genders (or Classes) and Numbers of Nouns	448—558
1. The Classes and Numbers of Nouns in the Bâ-ntu Languages	448—540
a. Numerical value and correspondence of the Derivative Prefixes of the Nouns	448—454 139
b. Disappearance of Classes or Genders	455—457 146
c. Nomenclature	458—460 148
d. The Prefixes of the Nouns in their different forms and in their numerical correspondence	461—514
A. In the South-eastern Branch	461—471
The Kafir Species (Kafir and Zulu)... ..	461—468 150
The Setshuana Species (Sextlapi and Sesuto)	469 & 470 162
The Tekeza Species (Lourenço Marques)	471 167
B. In the Middle Branch	472—501
aa. <i>The Mosambique Genus</i>	472—475
Dialects of Tette and Sena	472 & 473 169

P R E F A C E.

IN presenting, after seven years interval, another portion of this Comparative Grammar to the public, I am grateful that I have been permitted to proceed, at least so far, with my work. Yet I feel truly sorry that I have not been able to publish, at the same time with this, the remaining portion of the Second Part. For, in giving only the Noun, and not all the other forms of Concord, I have only afforded half a view of a subject which, in order to be rightly understood, almost requires to be presented in its entirety. For my own part, I should gladly have delayed the publication of this first section until the completion of the whole of the Second Part; but as it may be years before such is the case, I think that I have no right to defer the publication of that which is now ready.

The more I study the subject, the more I become convinced of the great dependence of human thought upon language, and the more examples I meet with of human errors that are mere consequences of the forms of language. The sources of popular error in every nation have to be mainly looked for in the impressions produced by the spoken idiom upon the national mind. Language frequently sets before our eyes images which are more or less distorted, which deceive us, and lead us to erroneous conceptions. The forms of a language, especially, are continually moulding our thoughts, keeping them in certain grooves, and confining them within certain limits. On this account, an intelligent study of the structure of different languages gives us the leading outlines of the history of human conceptions and misconceptions; and the gradual development of mind can only be traced upon the basis of comparative researches into the forms of human speech. Those classifications of the nouns, particularly, which are based upon the different forms of concord, exert a powerful influence upon the mind, and impress upon it different associations of ideas. The Bantu languages, for example, with their sixteen distinct pronouns, which indicate as many separate classes of nouns, not one of

which has any reference to sex,—must naturally cause the mind to view the world very differently from the Hottentot language, in which the pronouns, although eight in number, have each a certain sex-denoting, as well as numerical, meaning connected with them. For these reasons, the apparently dry study and exact comparison of the forms of the concord in the different South African languages, and the inquiry into the causes and origin of this concord, possess an interest extending far beyond that of facilitating the study of the individual languages.

The principle of representing the whole of a compound noun by one of its parts (which has led to the concord, and to the classification of the nouns as we find it regularly developed in the South African languages) may possibly be identical in the main with the so-called mode of “incorporation” peculiar to many American languages. I say this, however, with hesitation; for, upon the whole, this region is still a *terra incognita*,—no trained philologist having yet been found to devote himself to the comparative study of these languages. If even as much were done for America, as has been already accomplished for the African languages, general philology would be in a very different position, and we should be able to obtain, at least, some glimpses of the general history of human conceptions. However, it is not as if much had been done for Africa. On the contrary, the field of inquiry is very large, and promises a wealth of important results and new discoveries. Yet, excepting those who are practically engaged with one or another of these languages, scarcely any one has occupied himself with this branch of philology.

It is to be regretted that the greater number of comparative philologists appear to be still in a sort of rudimentary stage, corresponding to that in which zoologists would be if they refused to study any animals excepting those directly useful to man, and their nearest kindred species. In fact, the so-called Indo-European Comparative Philology now occupies the same place that Classical Philology did fifty or sixty years ago. It will not go beyond itself, and, as it were, shuts its eyes to the possibility that any other circle of languages can be akin to the Aryan. Yet it is clear that the complex

phenomena which characterise the Aryan circle of languages cannot be rightly understood without a careful comparative examination of other languages of simpler organisation, which shew more of the ancient structure. Some of that energy, now so frequently wasted upon the discussion of questions to which the Indo-European circle of languages alone can never afford the clue, might well be given to the systematic comparative study of the more primitive Sex-denoting languages. To direct the attention of comparative philologists to these lower forms of language, and to prove the relations in which they stand with regard to the more highly developed Sex-denoting tongues, is one of the chief aims of this work. On this account, I particularly regret that the present volume only elucidates one part of that grand system of Concord which is the fundamental principle of the Pronominal languages. To have shown how the pronominal elements pervade the whole life of these languages, and how the concord is everywhere originally due to the presence of such representative elements, would have removed many difficulties, and would have given the student a fuller insight into the relations which the different Pronominal languages occupy towards each other, and especially that in which Hottentot stands with respect to some of the more northern Sex-denoting languages,—such as the Egyptian, the Semitic, and the Aryan or Indo-European.

I desire gratefully to acknowledge the assistance I have received in my labours from many who are special authorities in different departments of these languages, among whom I may particularly mention,—for Kafir, the Revds. J. W. APPLEYARD and TIYO SOGA,—for Zulu, the Rev. H. CALLAWAY, M.D., and the Right Rev. J. W. COLENSO, D.D., Bishop of Natal,—for Setshuâna, the Rev. I. HUGHES and the late Rev. J. FRÉDOUX,—for Setshuâna and other languages of the Interior, Dr. LIVINGSTONE,—for the Zangian languages, the Rev. Dr. STERRER,—for those of the Bunda Genus, the Revds. C. H. HAHN and J. RATH,—for Hottentot, the Revds. G. KRÖNLEIN, H. TINDALL, and the late Rev. F. H. VOLLMER.

I need not say how much I am in every way indebted to Sir GEORGE GREY, to whom it is mainly due that I could undertake this grammatical work, helped by so unique a

philological collection referring to South African languages, as that in the Grey Library.

To the present Governor of the Cape of Good Hope, Sir PHILIP WODEHOUSE, to the Executive, and to the Legislature of the Colony especial thanks are due for having enabled me to complete this portion of my Comparative Grammar.

W. H. I. BLEEK.

Cape Town, 2nd April, 1869.

B. THE CONCORD.

I. THE NATURE OF THE CONCORD.

1. GENERAL REMARKS.

398. As we indicated already, in the first part of this Grammar (§§ 6—9), the common characteristic of the so-called Pronominal Languages is that a concord exists between nouns and certain other parts of speech, which are thereby referred to their respective nouns. Through this, a distribution of the nouns into classes (or genders)* takes place, which does not exhibit a strict analogy with any natural distinction, except in some of the most advanced of these languages,—particularly in English, and with modifications in Danish. But in all the more primitive types of the Pronominal Languages, the classes of nouns do not correspond exactly to the distinctions observed in nature, though they may have a certain reference to them. English *he*, Danish *han*, refers only to male beings, and English *she*, Danish *hun*, similarly to the opposite sex; whilst every noun denoting a being in which such distinctions of sex are not discernible is referred to in English by *it*, and in Danish, in some nouns, by *den*, in others by *det*.

* This use of the term *gender* has been objected to. In explanation I beg to state that in investigating the origin of the grammatical gender of nouns it will be found that the further we go back, the more it loses the apparent identity which it has at present in the English language, with the distinctions of sex. It is, therefore, necessary to divest one-self of the idea that gender must imply sex, and to treat the genders of nouns as that which they originally were,—namely, classes; thus giving to the term *gender* a wider meaning, having no necessary reference to sex.

Bleek, *S. Afr. Comp. Grammar*.

0

399. In German, however (though this language is nearly akin to both English and Danish), the pronoun *er* is not only, like the English *he* and Danish *han*, referred to nouns expressing male beings, but also to a great number of inanimate things, which are in English referred to by *it*, and in Danish by *den*; and in the same manner the German *sie* corresponds frequently in the extent of its meaning not only to the English *she*, Danish *hun*, but also to the English *it*, Danish *den*. It follows thence that the German *es*, though etymologically identical with the English *it*, is by no means so extensively used as the latter word; for the *es* does not refer by any means to all nouns expressing inanimate things, but only to a certain portion of them,—mainly to those to which also the Danish *det* refers.

400. We all know that a comparison of the kindred languages,—nay, a mere retracing of the English to its Anglo-Saxon parent—shows that the German has in this case preserved the more original conditions of the language, and that the more logical arrangements of the English and Danish tongues are of modern origin.

401. But it is not only with regard to the more logical arrangement of the classes (or genders) of nouns that the English differs from German and other kindred languages; but also with regard to the more limited extent of the concord between nouns and other parts of speech. Thus, if we compare the English sentences, *This handsome man appears, we love him*, and *This handsome woman appears, we love her*, we see that the only words in which the distinction of the nouns into classes (or genders) is visible, are the end words *him* and *her*. But if we translate the same sentence into German, we have *Dieser schöne mann erscheint, wir lieben ihn*, and *Diese schöne frau erscheint, wir lieben sie*, in which sentences a concord is apparent, not only in the last words (*ihn* and *sie*), but also in the first ones, *dieser* and *diese*. And if we go back to Latin, and render the above sentences literally, *Hic pulcher vir*

apparet, amamus eum, and Hæc pulchra mulier apparet, amamus eam, we meet with various forms for the different genders, not only in the first and last words (*hic* and *hæc, eum* and *eam*), but also in the second word (*pulcher, pulchra*).

402. On the whole, a comparison of the different Aryan languages, and a study of their various development, tend to show that, in general, those languages in which the division of the nouns into classes (or genders) is rendered visible through the concord of the greatest number of other parts of speech with the nouns to which they refer, may *primâ faciê* be expected to exhibit the most primitive structural features. Further we may consider it as in the highest degree probable that the less the classes (or genders) of nouns in a language agree with natural distinctions, the more original will be found to be the state of that language. In both these regards the South African languages claim a prominent, if not the most prominent, position among all the languages as yet known to us. The BA-NTU languages particularly extend the concord with the noun to almost all other parts of speech, and make it strongly visible in the various forms which these parts assume, when referred to different classes (or genders) of nouns. The number of classes (or genders) into which the nouns are here distributed, is far greater than in any other known language, amounting in most of the South African languages to more than a dozen classes (or genders), and in one, at least, to sixteen (if not eighteen); and of this large number of classes (or genders) in the Bâ-ntu languages only two agree with any natural distinctions, being restricted to nouns indicating personal beings (though not, however, including all of them), one class (or gender) to them in the singular, the other in the plural.

403. If, therefore, it should be ascertained that the distribution of the nouns into classes (or genders), as we find it in our (European and other Aryan) languages, is based

upon the same principle as in the South African languages, —it seems highly probable that the cause of this curious structural arrangement will be more easily discernible in the latter languages (the South African) than in the former (the Aryan).

404. Our plan is now, first to inquire into the cause of the distribution of the nouns into classes (or genders), in the BA-NTU languages, as well as in the HOTTENTOT language, this South African member of the Sex-denoting Family; then, to show how this affects the different parts of speech in the various South African languages; and, lastly, to see whether the distribution of the nouns into classes (or genders) in the other Sex-denoting languages is ascribable to the same cause as in Hottentot.

2. THE NATURE OF THE CONCORD IN THE BÂ-NTU LANGUAGES.

405. In order to introduce the student at once to the structural peculiarities of the Bâ-ntu languages, I begin with sentences in ZULU, which are similar to the above-given English and German ones, and will exhibit the changes which the different parts of speech undergo when brought into reference to the different classes (or genders) of nouns. Without entering into any further explanation, I will merely mention that the part of the noun whereby the same is referred to a certain class (or gender) is marked here by being printed in *Antique* type, while those portions of the other parts of speech which indicate their concord with the noun are in Roman letters, to distinguish them from the *Italics*, in which native words and sentences are generally given here.

1. U-*matu-ntu* w-*etu* o-mu-*ñle* u-ya-bonakala, si-m-tanda.

Man (or woman) ours handsome appears, we him love.

Our handsome man (or woman) appears, we love him (or her).

Thus also u-**m-fazi** woman, u-**m-fundisi** teacher, u-**mu-ne** elder brother, and almost all nouns of person formed with the derivative prefix **mu-**, or its abbreviations.

2. A-ba-ntu b-etu a-ba-*ǎ*le ba-ya-bonakala, si-ba-tanda.

People ours handsome appear, we them love.

Our handsome people appear, we love them.

Thus *e.g.*, a-**ba-fazi** women, a-**ba-fundisi** teachers, a-**ba-ne** elder brothers, and all nouns formed with the prefix **ba-**, which are all plurals to personal nouns in **mu**-(1.)

3. U-mu-ti w-etu o-mu-*ǎ*le u-ya-bonakala, si-wu-tanda.

Tree ours handsome appears, we it love.

Our handsome tree appears, we love it.

Thus *e.g.*, u-**mu-zi** kraal, u-**mu-nwe** finger, u-**mu-*ǎ*la** day, u-**m-kilo** fire, and almost all impersonal nouns formed with the derivative prefix **mu-**.

4. I-mi-ti y-etu e-mi-*ǎ*le i-ya-bonakala, si-yi-tanda.

Trees ours handsome appear, we them love.

Our handsome trees appear, we love them.

Thus *e.g.*, i-**mi-zi** kraals, i-**mi-nwe** fingers, i-**mi-*ǎ*la** days, and all nouns formed with the derivative prefix **mi-**, which are all plurals of impersonal nouns in **mu**-(3.)

5. I-li-zwe l-etu e-li-*ǎ*le li-ya-bonakala, si-li-tanda.

Country ours fine appears, we it love.

Our fine country appears, we love it.

Thus also i-**li-zwi** or i-**zwi** voice, i-**li-tye** or i-**tye** stone, i-**zulu** heaven, i-**gama** name, &c., &c.

6. A-ma-zwe etu a-ma-*ǎ*le a-ya-bonakala si-wa-tanda.

Countries ours fine appear, we them love.

Our fine countries appear, we love them.

Thus also, a-**ma-zwi** words, a-**ma-tye** stones, a-**ma-zulu** heavens, a-**ma-gama** names, a-**ma-kosi** kings (sng. i-**m-kosi** 9. king), a-**ma-doda** men (sng. i-**m-doda** 9. man), and all other nouns formed with the derivative prefix **ma-**, be they plurals to nouns in the singular of the 5th (**li-**) class (as most of them are), or of the 9th (**m-**) class, or of other classes,—or be they without corresponding singular, as a-**ma-nzi** water, and similar nouns.

7. I-si-zwe s-etu e-si-*ŋ*le si-ya-bonakala, si-si-tanda.

Nation ours fine appears, we it love.
Our fine nation appears, we love it.

Thus also, i-si-lo wild animal, i-si-tya a vessel for eating or drinking, i-si-ta enemy, and all other nouns formed with the derivative prefix *si-*.

8. I-xi-zwe z-etu e-zi-*ŋ*le zi-ya-bonakala, si-zi-tanda.

Nations ours fine appear, we them love.
Our fine nations appear, we love them.

Thus also, i-xi-lo wild animals, i-xi-tya vessels for eating or drinking, i-xi-ta enemies, and all other plurals of nouns formed with *si-* in the singular.

9. I-n-tombi y-etu e-n-*ŋ*le i-ya-bonakala si-yi-tanda.

Girl ours handsome appears, we her love.
Our handsome girl appears, we love her.

Thus also, i-n-to thing, i-m-vu sheep, i-m-hosi king, i-n-doda man, &c., &c.

10. I-xin-tombi z-etu e-zin-*ŋ*le zi-ya-bonakala, si-zi-tanda.

Girls ours handsome appear, we them love.
Our handsome girls appear, we love them.

Thus also, i-xin-to things, i-xim-vu sheep, i-xin-ti sticks (sing. u-lu-ti 11. stick), and many other plurals to nouns of the 9th (*n-*) and 11th (*lu-*) classes.

11. U-lu-ti lw-etu o-lu-*ŋ*le lu-ya-bonakala, si-lu-tanda.

Stick ours handsome appears, we it love.
Our handsome stick appears, we love it.

Thus also, u-bambo rib, u-nwele hair, &c., &c.

The 12th and 13th classes of nouns are lost in the languages of the South-eastern Branch (of the South African Division of the Bâ-ntu languages), to which the Zulu belongs; but they are met with in the languages of the Middle Branch; and in OTYIHERERÓ, the most southern language of the South-western Genus, the 12th (*tu-*) class corresponds as plural to the 11th (*ru-*) class, and thus we have in Otyihereró:

11. *O-ru-vio* ru-etu o-r-ua* ru-a-munika, ma-tu-ru-S'uvere.

Knife ours fine appears, we it love.

Our fine knife appears, we love it.

Thus also, *o-ru-pati* rib, *o-ru-hingo* long kind of stick, *o-ru-huaka* thick ironwire, *o-ru-koro* breast (chest), and all other nouns formed with the derivative prefix **ru-**.

12. *O-tu-vio* tu-etu o-t-ua* tu-a-munika, ma-tu-tu-S'uvere,

Knives ours fine appear, we them love.

Our fine knives appear, we love them.

Thus also, *o-tu-pati* ribs, *o-tu-hingo* long sticks, *o-tu-huaka* bracelets of ironwire, *o-tu-koro* breasts (chest), and all other nouns formed with the derivative prefix **tu-**, which are almost all plurals of nouns formed in the singular with the prefix **ru-**†.

13. *O-ka-ti* k-etu o-ka-ua k-a-munika, ma-tu-ke-S'uvere.

Stick ours fine appears, we it love.

Our fine stick appears, we love it.

Thus also, *o-ka-puka* a little animal, *o-ka-rume-ndu* a little man, and all other nouns formed with the derivative prefix **ka-**, most of which are in Otyihereró diminutives.‡

14. *O-u-ti* u-etu o-u-ua u-a-munika, ma-tu-u-S'uvere.

Sticks ours fine appear, we them love.

Our fine sticks appear, we love them.

Thus, *o-u-puka* little animals, *o-u-rume-ndu* little men, and all other nouns formed with the derivative prefix **u-**, some of which are in Otyihereró plurals to nouns of the 13th (**ka-**) class, whilst others

* Contracted respectively from *o-ru-ua* and *o-tu-ua*.

† Mr. Rath enumerates the following Otyihereró nouns formed with the derivative prefix **tu-**, which have no singular corresponding to them, viz. : *O-tu-nda* elevation, *o-tu-ndu* mould, *o-tu-tumukua* death-rattle, *o-tu-pikua* field (as opposed to home), *o-tu-nde* a bone in the nape of the neck.

‡ Other nouns (not diminutives) formed with **ka-** in Otyihereró are according to Mr. Rath, the following : *O-ka-numaere* evening star, *o-ka-pute* hook, *o-ka-hikuinini* a kind of partridge, *o-ka-hue* cat, *o-ka-ndukanambaka* frog, toad, *o-ka-pendomuti* a bird, *o-ka-rumata-vahona* a snake, *o-ka-S'eni* kind of antelope, *o-ka-tyavui* spider.

are clearly of the singular number, e.g. *o-u-tuku* night (pl. *o-ma-u-tuku* 6. nights), *o-u-ta* bow (pl. *o-ma-u-ta* 6. bows), *o-u-hona* kingdom, *o-u-nene* greatness, and all similar abstract nouns in *u-*.

The 14th class is also found in ZULU, but the nouns included in it do not clearly imply the singular or the plural number; therefore this class does not correspond here to any other (as singular or plural), but includes mostly abstract nouns, as *u-bu-kulu* greatness, *u-bu-²le* beauty, *u-bu-bi* evil, *u-bu-kosi* chieftainship, &c.

14. *U-bu-suku b-etu o-bu-²le bu-ya-bonakala, sa-bu-tanda.*

Night ours fine appears, we it love.

Our fine night appears, we love it.

15. *U-ku-tanda ku-etu o-ku-kulu ku-ya-bonakala, a-ba-ntu*
Loving ours great appears, men
ba-ku-bona, si-ku-bonakalisa.

it see, we it appear make.

Our great love appears, men see it, we make it appear.

Thus, also, *u-ku-hunga* righteousness, *u-ku-²la* food, *u-ku-sa* dawn, morning, *u-ku-kanya* light, *u-ku-tyo* saying, and all other nouns formed with *ku-*, among which are found the infinitives of all verbs.

As the 16th *pa-* class (or gender) has disappeared in Zulu (§ 430) we give an example of this class in OTYIHERERÓ, viz.:

16. *O-po-na p-etu o-po-pa-ua pa-munika ma-tu-pe-S'uvere.*

Place ours fine appears, we it love.

Our fine place appears, we love it.

406. A look at the above Zulu sentences will show us that in the examples which are given of the 11th (*lu-*) and 15th (*ku-*) classes (or genders), the concord between the noun and the other parts of speech consists in the full repetition of a part of the noun which we call its derivative prefix.* In the 2nd (*ba-*), 5th (*li-*), 7th (*si-*), 8th (*zi-*), and 14th (*bu-*) classes (or genders), the same rule holds

* We do not take here into consideration the initial vowels of the prefixes of the nouns, and of the adjectives, between which and the prefixes there is an evident agreement, as this will be further elucidated in the course of our researches. (§. 461—466.)

P

the Zulu forms *w-etu* 3. and *y-etu* 4. are here respectively derived from an original *MU-ETU* 3. and *MI-ETU* 4. This tends to make us believe that wherever in the 3rd class (or gender) we find now a *w* and in the 4th a *y*, as a sign of class, the *w* is derived from an original *mu*, and the *y* from an original *mi*.

409. Similarly in the 6th (*ma-*) class (or gender), the Zulu *a-ma-nzi etu* is translated literally in
 water ours

Isubu *ma-diba ma-su*; and with this fuller form *ma-su* there agree also the corresponding forms of this possessive adjective in the 6th (*ma-*) class (or gender), in Kongo *m-etu* (our), and in Mpongwe *ma-zyo*.

410. As we have shown how the Zulu *etu* of the 6th (*ma-*) class (or gender) is derived from a former *MAETU*, —in the same manner all the other cases of concord between the nouns and other parts of speech (with a few particular exceptions which will afterwards be considered) can be proved to have arisen from an actual identity of the original forms of the derivative prefixes of the nouns with those portions of the other parts of speech which indicate the concord, or are, as we would call them, signs of the gender. The question is now, how this identity has arisen, and, consequently, what is the real cause of this peculiar division of the nouns into classes, or genders.

411. The most obvious explanation appears to be to assume that those portions which indicate the concord are pronouns, and that they were prefixed to the nouns in a similar manner as, for example, *he* and *she* are to *he-bear* and *she-goat*. Now, where these marks of concord, indicative of class (or gender), are found in other parts of speech, as referring these to nouns, it is true that they must be admitted and are to be considered as true pronouns,—*i.e.*, as mere representatives of the nouns to which they respectively refer. But if we assumed that the derivative prefixes of nouns were originally pronouns, this would not explain how there came to be such a

variety of different classes (or genders) of pronouns, or what was the principle on which they were respectively used for the formation, or for the classification, of the nouns. It has, indeed, been suggested by Sir GEORGE GREY that they were chosen mainly for euphony's sake,—*i.e.*, there being a variety of prefixes which could be used with nouns, those were selected which were most in harmony as to sound with the remaining part of the noun. This theory is probably true in a certain restricted sense,—*i.e.*, that where there were two or more forms of nouns with different prefixes which expressed very nearly the same meaning, that form would probably be generally retained which was the most euphonic, or at least the most easily pronounced.

412. But such an explanation does not, however, exclude the fact that every one of these different forms of the nouns conveyed originally a meaning of its own, and that each prefix possessed a distinct power. That this is really the case is clearly perceived even by a cursory glance at a variety of nouns in the Bâ-ntu languages belonging to different classes, though formed from the same stems. For example, in Zulu we have the noun *u-mu-ntu* (human being, person,) belonging to the 1st (*mu-*) class (or gender), and its plural *a-ba-ntu* (people) to the 2nd (*ba-*) class, and from the same stem *i-si-ntu* (human race, mankind,) of the 7th (*si-*) class, *u-bu-ntu* (human nature) of the 14th (*bu-*) class, besides which the Kafir language has *u-lu-ntu** of the 11th (*lu-*) class, which here means "human race, human kind," whilst *i-si-ntu* 7. in Kafir, according to Appleyard, indicates "human species."

413. In *Se-suto*, the name of the language itself belongs to the 7th (*se-*) class (or gender), whilst the people who speak it are called by a noun of the 2nd (*ba-*) class (or gender) *Ba-suto*, and one of them is a *Mo-suto*, which is

* In Zulu this word has the meaning of "outer covering of bowels," but a meaning similar to the Kafir one has also, though rarely, been observed. (Bishop of Natal's Grammar p. 16, Dictionary p. 354.)

a noun of the 1st (*mo-*) class. The name of their country is *Le-suto*, a noun of the 5th (*le-*) class. Similarly, a *Mo-tshuána* (1st class) is one of the nation of the *Be-tshuána* or *Ba-tshuána* (2nd class), who speak *Se-tshuána* (7th class)*; and an *O-mu-hereró* 1. is one of the *O-va-hereró*, 2. (Damaras), who speak *O-tyi-hereró* 7., i.e., in Damara fashion.†

414. A chief is called in Kafir *i-n-kosi* 9., and several a-*ma-kosi* 6., and chieftainship is *u-bu-kosi* 14. In Otyihereró, a chief is *o-mu-hona* 1., chiefs are *o-va-hona* 2., and chieftainship *o-u-hona* 14.

415. These specimens may suffice for the present to exemplify the fact that the derivative prefixes of the nouns in the Bâ-ntu languages have a similar power and meaning, as e.g., the English derivative suffixes *-dom*, *-ship*, *-ness*, *-er*, *-hood*, &c. Now, not even by the most strenuous upholders of the so-called Pronominal Theory‡ have these English derivative suffixes been deduced from pronouns; and there is no doubt that originally the nouns formed with these suffixes were compound nouns, and that these syllables (*-dom*, *-ship*, *-ness*, &c.) had almost all at an earlier period of the language the value and meaning of nouns, and were used separately as such.

416. It is, therefore, the most natural assumption, that the derivative prefixes of the nouns in the Bâ-ntu languages also, had originally a separate value and meaning, and that nouns formed with them were compounded, and

* *Vide* the note on pp. 109—112.

† That *O-tyi-hereró* does not mean merely the Damara Language, is clear from such sentences as *o-m-dyuo y-a-tungua O-tyi-hereró*, the house is built in Damara fashion.—(J. Rath).

‡ I here call by the name of Pronominal Theory a mania by which some of the most eminent philologists were once seized, of deriving all those grammatical elements of the language of which the explanation was not obvious, from so-called pronouns, really, however, from demonstrative particles.

that when the parts *to be determined** lost their meaning as separate words, (i.e., became obsolete,) these nouns, originally compound, became derivatives.

417. Now, if the derivative particles of the nouns in the Bâ-ntu languages were still merely parts of compound nouns, and could still be used separately, there would be nothing remarkable in their use as representatives of the nouns which are compounded with them. This use is found in all languages. In English, for example, in speaking of such compound nouns as *spyglass*, *lookingglass*, *wine-glass*, &c., we may use the simple nouns *glass* for each of them, though in a slightly different meaning from its separate and independent use. Supposing, now, that this word *glass* had lost its separate and independent meaning, yet retained its power of representing those compound nouns, of which it constitutes the principal nominal element, it would have become a pronominal element, or a particle to be used in order to refer other parts of speech to the noun which it at the time represented. Now, in the Bâ-ntu languages the derivative prefixes of the nouns have done this; they have lost their separate value as nouns, but retained the power of being used as representatives of the nouns of which they form a part.

418. Or, to illustrate the case by another analogy. Let us suppose that in English, for example, the syllable *dom* could still be used by itself as representative of such words as are compounded with it, and we could, therefore, speak of *the fine dom* meaning *the fine kingdom* or *the fine dukedom*, or any other *dom*. In olden times, of course, when *dom* (related to *doom*,) was used as an independent noun, it could represent a noun of which it formed a

* In order not to be obscure, I should perhaps remind the general reader that in compound words one part is called the *determining*, i.e., that which points out or determines more exactly the value of the other, which latter is called the part *to be determined*. For example, in the compound words "horse-shoe," "horse-flesh," "rail-way," "tram-way," &c., &c., *horse*, *rail*, and *tram*, are the determining elements, showing what kind of *shoe*, *flesh*, or *way*, is meant.

component part in the same manner, as, for example, the word *empire* can now stand for the fuller *king's empire*. But when it lost its independent position, it lost with it the representative power of standing instead of the nouns, of which it formed a component part. For, in the more advanced stages of morphological development, even in Pronominal Languages, it generally seems that the representative power of a noun is lost with its (the noun's) independent use. Thus we can no longer use the syllable *-ship* (German *-schaft*, which belongs originally to the same root as *shape*) for such nouns ending with it as, for example, *governorship*, *clerkship*, *stewardship*, &c.*; though we can, on the other hand, indicate a *governor's office* by the use of the latter noun *office*, because this has continued to be used as an independent noun, and has, when alone, a meaning of its own, which includes that of the more specified term; and for the same reason the independent noun *ship* (German *schiff*) can still be used in English as representative of nouns compounded with it,—as, *steamship*, *flagship*, &c.; for these nouns do not merely end with *ship*, but indicate ships. If, however, the noun *ship* had lost its independent meaning, the words compounded with it could no longer be referred to by this simple syllable, though they might continue to exist as derived nouns.

419. When the formation of the pronominal elements, (by which the concord of the noun with other parts of speech was effected,) first took place in the so-called Pronominal Languages,—syllables, after losing their independent value as nouns, were retained for the purpose of representing those nouns, of which they formed principal parts. Thus the Zulu sentence “u-bu-kosi b-etu

* It is true that by a satirical licence, such a word as *ology* is made to represent nouns ending with this termination. But this is an exception which rather tends to prove the rule that such formations (which appear, however, to differ entirely in their origin from that of the pronouns in the South African languages,) cannot be seriously employed at present in our languages.

o-bu-kulu bu-ya-bonakala, si-bu-tanda," would literally be in English "*the king-dom, our dom, which dom is the great dom, the dom appears, we love the dom,*"—a manner of speaking which sounds, of course, absurd in English; and so does also its most literal German translation "*das könig-thum, unser thum, welches thum ist ein grosses thum, das thum erscheint, wir lieben das thum.*" But it becomes at least intelligible, if, instead of the derived noun *könig-thum* (kingdom), we use the compound noun *könig-reich* (king's empire), and say: "*das könig-reich, unser reich, welches reich ist ein grosses reich, das reich erscheint, wir lieben das reich;*" i.e. "*the king's empire, our empire, which empire is the great empire, the empire appears, we love the empire.*" In like manner, though we cannot say "*the steam-er, our er, which er is a great er, the er appears, we love the er,*" because the syllable *er* is here merely a derivative suffix which has no meaning of its own;—if we use instead of the derived word *steamer* the compound one *steamship*, the last syllable of this word may be employed to represent the whole, and thus we might say: "*the steam-ship, our ship, which ship is a great ship, the ship appears, we love the ship.*" But in words where the syllable *ship* is a derivative suffix, it is incapacitated from being used by itself for the purpose of representing the whole compound noun. Thus it would be absurd to say, "*the friend-ship, our ship, which ship is a great ship, the ship appears, we love the ship.*" The Zulu construction is, as far as regards the quality of the noun, (which is a derived one like *kingdom, königthum, steamer, friendship, &c.*, not a compound one as *königreich, steamship, &c.*), similar to that of those sentences which are now impossible to us; but also like that of the other sentences (at least allowable,) in the power of representing the whole of a composite noun by means of its principal element.

420. There is an appearance of redundancy in this frequent repetition of the representative elements of the noun, when they are thus used with all parts of speech,

the Zulu forms *w-etu* 3. and *y-etu* 4. are here respectively derived from an original *MU-ETU* 3. and *MI-ETU* 4. This tends to make us believe that wherever in the 3rd class (or gender) we find now a *w* and in the 4th a *y*, as a sign of class, the *w* is derived from an original *mu*, and the *y* from an original *mi*.

409. Similarly in the 6th (*ma-*) class (or gender), the Zulu *a-ma-nzi etu* is translated literally in

water ours

Isubu *ma-diba ma-su*; and with this fuller form *ma-su* there agree also the corresponding forms of this possessive adjective in the 6th (*ma-*) class (or gender), in Kongo *m-etu* (our), and in Mpongwe *ma-zyo*.

410. As we have shown how the Zulu *etu* of the 6th (*ma-*) class (or gender) is derived from a former *MAETU*,—in the same manner all the other cases of concord between the nouns and other parts of speech (with a few particular exceptions which will afterwards be considered) can be proved to have arisen from an actual identity of the original forms of the derivative prefixes of the nouns with those portions of the other parts of speech which indicate the concord, or are, as we would call them, signs of the gender. The question is now, how this identity has arisen, and, consequently, what is the real cause of this peculiar division of the nouns into classes, or genders.

411. The most obvious explanation appears to be to assume that those portions which indicate the concord are pronouns, and that they were prefixed to the nouns in a similar manner as, for example, *he* and *she* are to *he-bear* and *she-goat*. Now, where these marks of concord, indicative of class (or gender), are found in other parts of speech, as referring these to nouns, it is true that they must be admitted and are to be considered as true pronouns,—i.e., as mere representatives of the nouns to which they respectively refer. But if we assumed that the derivative prefixes of nouns were originally pronouns, this would not explain how there came to be such a

variety of different classes (or genders) of pronouns, or what was the principle on which they were respectively used for the formation, or for the classification, of the nouns. It has, indeed, been suggested by Sir GEORGE GREY that they were chosen mainly for euphony's sake,—*i.e.*, there being a variety of prefixes which could be used with nouns, those were selected which were most in harmony as to sound with the remaining part of the noun. This theory is probably true in a certain restricted sense,—*i.e.*, that where there were two or more forms of nouns with different prefixes which expressed very nearly the same meaning, that form would probably be generally retained which was the most euphonic, or at least the most easily pronounced.

412. But such an explanation does not, however, exclude the fact that every one of these different forms of the nouns conveyed originally a meaning of its own, and that each prefix possessed a distinct power. That this is really the case is clearly perceived even by a cursory glance at a variety of nouns in the Bâ-ntu languages belonging to different classes, though formed from the same stems. For example, in Zulu we have the noun *u-mu-ntu* (human being, person,) belonging to the 1st (*mu-*) class (or gender), and its plural *a-ba-ntu* (people) to the 2nd (*ba-*) class, and from the same stem *i-si-ntu* (human race, mankind,) of the 7th (*si-*) class, *u-bu-ntu* (human nature) of the 14th (*bu-*) class, besides which the Kafir language has *u-lu-ntu** of the 11th (*lu-*) class, which here means "human race, human kind," whilst *i-si-ntu* 7. in Kafir, according to Appleyard, indicates "human species."

413. In *Se-suto*, the name of the language itself belongs to the 7th (*se-*) class (or gender), whilst the people who speak it are called by a noun of the 2nd (*ba-*) class (or gender) *Ba-suto*, and one of them is a *Mo-suto*, which is

* In Zulu this word has the meaning of "outer covering of bowels," but a meaning similar to the Kafir one has also, though rarely, been observed. (Bishop of Natal's Grammar p. 16, Dictionary p. 354.)

a noun of the 1st (*mo-*) class. The name of their country is *Le-suto*, a noun of the 5th (*le-*) class. Similarly, a *Mo-tshuána* (1st class) is one of the nation of the *Be-tshuána* or *Ba-tshuána* (2nd class), who speak *Se-tshuána* (7th class)*; and an *O-mu-hereró* 1. is one of the *O-va-hereró*, 2. (Damaras), who speak *O-tyi-hereró* 7., i.e., in Damara fashion.†

414. A chief is called in Kafir *i-n-kosi* 9., and several *a-ma-kosi* 6., and chieftainship is *u-bu-kosi* 14. In Otyihereró, a chief is *o-mu-hona* 1., chiefs are *o-va-hona* 2., and chieftainship *o-u-hona* 14.

415. These specimens may suffice for the present to exemplify the fact that the derivative prefixes of the nouns in the Bâ-ntu languages have a similar power and meaning, as e.g., the English derivative suffixes *-dom*, *-ship*, *-ness*, *-er*, *-hood*, &c. Now, not even by the most strenuous upholders of the so-called Pronominal Theory‡ have these English derivative suffixes been deduced from pronouns; and there is no doubt that originally the nouns formed with these suffixes were compound nouns, and that these syllables (*-dom*, *-ship*, *-ness*, &c.) had almost all at an earlier period of the language the value and meaning of nouns, and were used separately as such.

416. It is, therefore, the most natural assumption, that the derivative prefixes of the nouns in the Bâ-ntu languages also, had originally a separate value and meaning, and that nouns formed with them were compounded, and

component part in the same manner, as, for example, the word *empire* can now stand for the fuller *king's empire*. But when it lost its independent position, it lost with it the representative power of standing instead of the nouns, of which it formed a component part. For, in the more advanced stages of morphological development, even in Pronominal Languages, it generally seems that the representative power of a noun is lost with its (the noun's) independent use. Thus we can no longer use the syllable *-ship* (German *-schaft*, which belongs originally to the same root as *shape*) for such nouns ending with it as, for example, *governorship*, *clerkship*, *stewardship*, &c.*; though we can, on the other hand, indicate a *governor's office* by the use of the latter noun *office*, because this has continued to be used as an independent noun, and has, when alone, a meaning of its own, which includes that of the more specified term; and for the same reason the independent noun *ship* (German *schiff*) can still be used in English as representative of nouns compounded with it,—as, *steamship*, *flagship*, &c.; for these nouns do not merely end with *ship*, but indicate ships. If, however, the noun *ship* had lost its independent meaning, the words compounded with it could no longer be referred to by this simple syllable, though they might continue to exist as derived nouns.

419. When the formation of the pronominal elements, (by which the concord of the noun with other parts of speech was effected,) first took place in the so-called Pronominal Languages,—syllables, after losing their independent value as nouns, were retained for the purpose of representing those nouns, of which they formed principal parts. Thus the Zulu sentence “u-bu-*kosi* b-*ctu*

* It is true that by a satirical licence, such a word as *ology* is made to represent nouns ending with this termination. But this is an exception which rather tends to prove the rule that such formations (which appear, however, to differ entirely in their origin from that of the pronouns in the South African languages,) cannot be seriously employed at present in our languages.

o-bu-kulu bu-ya-bonakala, si-bu-tanda," would literally be in English "*the king-dom, our dom, which dom is the great dom, the dom appears, we love the dom,*"—a manner of speaking which sounds, of course, absurd in English; and so does also its most literal German translation "*das könig-thum, unser thum, welches thum ist ein grosses thum, das thum erscheint, wir lieben das thum.*" But it becomes at least intelligible, if, instead of the derived noun *könig-thum* (kingdom), we use the compound noun *könig-reich* (king's empire), and say: "*das könig-reich, unser reich, welches reich ist ein grosses reich, das reich erscheint, wir lieben das reich;*" i.e. "*the king's empire, our empire, which empire is the great empire, the empire appears, we love the empire.*" In like manner, though we cannot say "*the steam-er, our er, which er is a great er, the er appears, we love the er,*" because the syllable *er* is here merely a derivative suffix which has no meaning of its own;—if we use instead of the derived word *steamer* the compound one *steamship*, the last syllable of this word may be employed to represent the whole, and thus we might say: "*the steam-ship, our ship, which ship is a great ship, the ship appears, we love the ship.*" But in words where the syllable *ship* is a derivative suffix, it is incapacitated from being used by itself for the purpose of representing the whole compound noun. Thus it would be absurd to say, "*the friend-ship, our ship, which ship is a great ship, the ship appears, we love the ship.*" The Zulu construction is, as far as regards the quality of the noun, (which is a derived one like *kingdom, königthum, steamer, friendship, &c.*, not a compound one as *königreich, steamship, &c.*), similar to that of those sentences which are now impossible to us; but also like that of the other sentences (at least allowable,) in the power of representing the whole of a composite noun by means of its principal element.

420. There is an appearance of redundancy in this frequent repetition of the representative elements of the noun, when they are thus used with all parts of speech,

which have a reference to it. But this will not much astonish those who have studied the literature of primitive races, and know the construction of their compositions

“ With their frequent repetitions,
And their wild reverberations.”

The less people as yet express slight changes in their meaning by the mere position of words, by internal changes, or slight variations of pronunciation,—the more necessity there is for actual verbal expression, and repetition of that which is to be referred to. Besides, it must be remembered that these repetitions of parts of the noun take the place of pronominal elements, and a careful analysis of most of the highly civilized languages will show that in the grammatical forms indicating the concord, pronouns were originally used, which have now generally disappeared, though their influence continues to be felt. Still the Bâ-ntu languages far exceed in cumbersome repetition even the lowest known types of Sex-denoting languages.*

* Dr. LIVINGSTONE in his “ANALYSIS,” page 9, says : “The chief use in the extraordinary repetition of the signs of nouns which occur in pure Setshuana, may be generally stated to be to give precision to the sentence. They impart energy and perspicuity to each member of a proposition, and prevent the possibility of a mistake as to the antecedent. They are the means by which with a single syllable or letter a recurrent allusion to the subject spoken of is made, which cannot be accomplished by our lawyers without the clumsy circumlocution of ‘said defendant,’ ‘said subject matter,’ &c., &c. They are, moreover, used as the articles are in Greek, but invariably follow, never precede the noun.” [In Kafir and some other Bâ-ntu languages, they also precede the noun.—W. H. I. B.] “They are also demonstrative pronouns, &c., &c., as we shall hereafter show.”

In a letter from Zanzibar, dated March, 2nd, 1866, he further remarks: “I cannot quite sympathize with you when you speak of that use as ‘cumbersome repetition.’ The absence of it, in the mouths of halfcastes, speaking an impure form of Setshuana, used to sound in my ears excessively harsh. And the fact of the sign being the easily recognizable initial sound of the noun, prevented any of that doubt which always clings to those abominations of the English language, ‘former’ and ‘latter’. See how much difficulty you had to express yourself in Par. 403.”

MO-TSHUANA, BE-TSHUANA, SE-TSHUANA.

[Note to § 413.]

With reference to the etymology of these words, the Rev. R. MOFFAT stated that the words **Se-tshuána** 7., **Be-tshuána** 2., and **Me-tshuána** 1., were not derived, as generally believed (*vide* "Livingstone's Travels," p. 200) from the verb *tshuána* (be like each other, Kafir *funá*), but from the adjective-stem *tshuána* (Kafir *-m̃lotshana*) a little white, or inclining to white, light-coloured, (*i.e.*, not black, probably in opposition to the more dark-coloured tribes of the North,) a diminutive form from *tshueu* (Kafir *-m̃lope*, Ki-kamba *-eu*, Mpongwe *-pupu*) white. (Sir G. Grey's Library, Vol. I. Part I. p. 184.)

This derivation was, however, rejected by the late Rev. J. FREDOUX, who said in a letter to the author: "**Me-tshuána** 1. is not the diminutive form from *tshueu* 9. (white), but from *-ntshu* (black), and means, therefore, not 'inclining to white,' but 'inclining to black,' as the colour of the Betschuána. When an individual of that nation is rather whitish, he is sometimes said to be *mo-shuána* (pronounced *mo-sheuana*) 1., and this is the diminutive form from *tshueu* 9. (*mo-shueu* 1.), meaning 'inclining to white.'"

Further, Dr. D. LIVINGSTONE, in a letter dated "Tette, 22nd February, 1859," made the following remarks on this subject: "Mr. Moffat's idea," he says, "is probably the right one, but as a philologist you may like to hear why some minds prefer the meaning of 'likeness or equality.'"

"When sex is spoken of in connection with colour, the diminutive form is invariably applied (the diminutive being referred to the colour, not size). Thus *k̃xomu e tshueu* 9. a white ox, *i.e.*, altogether white; *k̃xomu e tshuana* 9. a white cow, not a little, but entirely; *k̃xomu e e-ntshu* 9. a black ox; *k̃xomu e tshuána* 9. black cow; *k̃xomu e k̃xueba* 9. a speckled ox; *k̃xomu e k̃xuebana* 9. a speckled cow. The idea of littleness seems to go to denote sex by the lesser size of the females, the males being denoted by *tóna* 9., in the same way.

"This point is not adverted to in the "ANALYSIS," but it is so distinctly adhered to in the language that an additional syllable is introduced to express a little of any colour. Thus *Mo-sheu* 1. a white man; *Mo-sheunyana* 1. a little white man; *Mo-ntshu* 1. a black one; *Mo-ntshunyana* 1. a little black one. One of Sebituane's daughters is called *Montshunyana* from her colour, being as light as an Arab woman's, *i.e.*, only a little black.

"Were it not for the cow difficulty the term **Be-tshuána** 2. would be better translated 'a little black,' instead of 'a little white.' They were a little blacker than the Bushmen and Hottentots. They had intercourse with them, but they had none with the people beyond the Desert. To

say they are a little whiter than these people is to reason from our own knowledge of what is only partially the case. The **Ba-tóka** 2., for instance, the **Ba-nyai** 2., and other tribes are as light as they are."

Then, Dr. Livingstone quotes one sentence, apparently in support of his first etymology. "A man was checked by Setshele for telling him some heathen story. He did not wish to hear it. 'You are under the Southern people,' said the man, in a pet. '*Re Botshuana*' [We are Betshuana, or alike?], replied Setshele, 'I follow what I found in the book; I am not inferior or under them.' If he had been applying a feminine term to himself, the assertion of equality would have been meaningless."

Lastly Mr. FREDOUX in a subsequent letter, dated Motito, February 16th, 1866, wrote as follows :

"As you have noticed in a note the various derivations given of the word **Be-tshuana**, I shall add here, on that account, the following remarks which may be of interest to you.

"1. *Objections which may be made to what is said in favour of the common derivation (from **χ** **○** *tshuana* 15. to be alike).*

"1°. Dr. LIVINGSTONE says (in his book) that the Betshuana use that name as meaning *Equals*. I have never observed that, and I believe no Motshuana will say that such is the meaning of the word. In fact, Dr. L. himself admits nearly as much by saying a little farther, that the Betshuana cannot explain the derivation of their name, which would be the simplest thing in the world, *if they attached to it the meaning expressed by a verb which they use continually*. Thus they would say at once *Re Betshuana χone rea tshuana* (We are Betshuana, because we are like each other), or *Betshuana hi χo re ba ba tshuana* (Betshuana that is to say those who are like each other).

"2°. Dr. Livingstone says in support of his derivation that the Betshuana call themselves by that name *exactly in the same sense as* Irishmen, &c., would say, 'We are Britons or Englishmen.' Now this would favour his derivation only if it could be shown that both the words *Britons* and *Englishmen* also mean *Equals*, since these are used exactly in the same sense as Betshuana is used. If Britons and Englishmen do not mean *Equals*, what he says here is rather against him.

"3°. But again **χ** **○** *tshuana* 15. does not mean properly *to be equals*, but *to be alike*. Such being the case, the noun would mean *Those who are alike* or *those who are like each other*, rather than 'Equals.' Now it is difficult to understand how a nation could call itself by such a name, except its members distinguished themselves among other peoples by being so very much like each other in colour and forms, which is not the assumption.

"4°. I may add, without giving too much importance to this, that according to that derivation, **Ba-tshuana** 2. would be properly a phrase rather than a noun, and that the sing. would be **O-a-tshuana** 1. rather than **Mo-tshuana** 1.

"5°. In the letter you quote, Setshele seems to be made to apply the name Batshuana not only to himself and his people, but even to the Whites. According to that, that word ought not to be considered any more as a proper name and as the particular name of the Betshuana. It would be a common word of the language. But there must be some mistake here, perhaps on my part. Setshele cannot have said, 'I and the Southern people are Betshuana,' except by 'Southern people' he meant Southern Betshuana, such as the BaXlapi.

"My opinion is that whatever may be the root of the name, it is now used merely as a name, without any other meaning being attached to it; and therefore, even if it was properly and originally a feminine, Setshele might with propriety apply it to himself.

"II. What may be said in favour of the derivation which was proposed by me (from ntsho black).

"1°. The word *motshuana* 1. means: (1) A blackish person, without reference to sex or size; (2) a *Motshuana*, a person of the Betshuana nation. Now it seems to be extremely natural to derive the second meaning from the first, without seeking for another etymology, when the word is taken in the second sense,—just as when we find the surname *Brown* in English, we think it is quite unnecessary to hunt for another root, when we have the adjective *brown*.

"2°. We seem to be still more pressed to agree to the above explanation of the name *Motshuana*, when we consider that that word, when used in the first sense, denotes precisely the typical colour of the Betshuana. If you take a native who is rather dark-coloured for a *Motshuana* and ask what is his colour, the answer will be: *montsho* 1. (black); if you take one who is somewhat light-coloured, the answer will be: *moshueue* or *moshouana* (pronounced also *moshuaana*); if you take one who is of the usual colour, the answer will be: *motshuana*. This may be tried by any one; the result is always the same.

"3°. If it be asked why that explanation of the name of the Betshuana was not thought of from the first, and generally received, my answer will be: For the very simple and sufficient reason that the first meaning of the word *motshuana* had been noticed by few, if by any Europeans. You see from Livingstone's remarks that when he wrote his letter to you, he was not aware of that sense. Hence his 'cow difficulty.' That sense, however, is known to all the Betshuana, and there is no possibility of denying its existence, when one has questioned the natives about it. (See the late Rob. Moffat's work on Phonology, page 15.)

"You will perhaps be surprised, after all I have said above, to hear me add that, after all, I do not feel absolutely sure that my explanation of the name Betshuana was the right one, and that I am now somewhat inclined to confess my ignorance on that point, as the Betshuana themselves do.

"The word *motshuana* "a blackish person" is not pronounced exactly like *motshuana*, "a Mochuana." Had the two words had the same pronunciation, very likely the natives themselves might give to their name

the above-mentioned derivation, which they do not do. According to the orthography followed in my "Sketch of Grammar," the first word is pronounced *mōchúana* (*mō-tshúana*), whilst the other appears to be pronounced *Mōcúana* (*Mo-tshúana*.) There may be besides some difference in the pronunciation of the first *a*. This, however, goes about as much against the derivation from *χO-tshuana* as against that from *-ntsho*. I confess this difference of pronunciation seems to me to be a great difficulty. To get over it, we would have to say that, in the course of time, the proper name was slightly altered, and this is not an impossibility.

"But has that name been in use for many generations? This may perhaps be doubted. It appears to be pretty certain that the word *Betshuana* originated in the South; that not very long ago, say 40 or 50 years ago, it was unknown among the *Bahurutse*, the *Bahuaketsi*, and the other northern tribes; and that these first heard it from the *Baǀlapis*, who applied it to *them* (to the northern tribes), and *not* to themselves. This is what I am assured of by the natives, for instance by an old *Mohurutse* and an old *Moǀuaketsi*, who live here. At the beginning of the present century, however, travellers found the word in existence at *Lithakoǀ* and *Kuruman*, and, it would seem, applied it to the *Baǀlapis* as well as to the other tribes."

3. THE NATURE OF THE CONCORD IN THE HOTTENTOT LANGUAGE.

421. This appears at once, if we translate the first of the previous examples into the Hottentot language, and vary it according to the different classes (or genders).*

Masc. sing. *Si-da ē-sa kkhoi-p ta khui, /nam-bi-da-ra.*

Our handsome man does appear, love him we do.

Our handsome man (husband) appears, we love him.

* The Hottentot sentences given in this and the following paragraph are (with one exception, that illustrating the common sing. in § 421) taken from a manuscript in the Grey Library, kindly furnished by the late Rev. F. H. Vollmer. The orthography has been slightly altered. In their revision, use has been made of some valuable notes by the Superintendent of Missions in Great Namaqualand, the R. Rev. G. Krönlein. It must be borne in mind that the pronunciation of some words in the dialect of the *Gei-//khous*, or *Roode Volk*, among whom Mr. Vollmer resided, differs from that in which Krönlein's translation of the New Testament is written. The *Gei-//khous* for example, say *goma-ǀ* (common sing.) "oxen" instead of *gama-ǀ* (§ 226, note), *ǀen-ǀ* (f. s.) "name" for *ǀon-ǀ*, */geira-ǀ* (m. s.) "jackal" for */gūi-ǀ*, &c.

- Masc. plur. *Si-da ē-sa khei-gu ra khui, |nam-gu-da-ra.*
 Our handsome men do appear, love them we do.
 Our handsome men (husbands) appear, we love them.
- Masc. dual. *Si-da |gam ē-sa khei-kha ra khui, |nam-kha-da-ra.*
 Our two handsome men do appear, love them we do.
 Our two handsome men (husbands) appear, we love them.
- Fem. sing. *Si-da ē-sa tara-s ta khui, |nam-si-da-ra.*
 Our handsome woman does appear, love her we do.
 Our handsome woman appears, we love her.
- Fem. plur. *Si-da ē-sa tara-ti ra khui, |nam-ti-da-ra.*
 Our handsome women do appear, love them we do.
 Our handsome women appear, we love them.
- Common sing. *Ēsa khei-ī ra khui, |nam-i-da-ra.*
 Handsome person any appears, we him love.
 Any handsome person appears, we love him (or her.)
- Common plur. *Si-da ē-sa khei-m ta khui, |nam-in-da-ra.*
 Our handsome people do appear, love them we do.
 Our handsome people appear, we love them.
- Common dual. *Si-da |gam ē-sa khei-ra ra khui, |nam-ra-da-ra.*
 Our two handsome persons do appear, love them we do.
 Our two handsome persons appear, we love them.

422. In these sentences the concord is apparent in the objective pronouns only, not in the so-called possessive pronouns, or other adjectives, nor in the verb, as referring to its subject; the variation of *ta* for *ra* being entirely dependent upon the nature of the preceding letter.* The concord will, however, become more evident, if we take other sentences as examples, in which adjectival forms follow their nouns, &c.

MASCULINE SINGULAR.

//Nā au-p si-da |hau-s-di-p, |khu-hā-p, |nī |ā-s-|na //an-hā-p,
 That man our tribe's he, rich being, another village-in dwelling,

* If emphasis is required, *gye-ra* is employed instead of *ra* or *ta*.

hō-bi-da-ra, gare-da-ra goma-n ā-b-a, tsī-p-ta |hai-da
find him we do, praise we do cattle of him, and he does present us
|gam tsāu-n ||ēi-p-di-n-χa.
two calves his from.

The man who belongs to our tribe, who is rich, who dwells in that village, we find him, we praise his cattle, and he presents us with two of his calves.

||Nā !nau-p tara-s-di-p, ||nā-p gei-p, om-mi-!na ||goē-p, mū-bi-da-ra,
That beam woman's it, that large, house-in lying, see it we do,
||ēi-b-di ||ou-b-a da-ra mū-~~an~~, tsī-da ī-p ā-b-a ra |nam,
its thickness we do see-know, and we appearance of it do like,
tsī-p-ta om-m-a ~~khā~~-!na.
and it does the house support.

The beam which belongs to the woman, which is large, which lies in the house, we perceive its thickness, and we like its appearance, and it supports the house.

This class or gender (masculine singular) includes all nouns terminating in **-p** (written **-b** by the Rhenish Missionaries), and a few ending in **-mi**, **-ni**, (and perhaps **-ri**), as *om-mi* (Tindall and Krönlein's *omi*, Vollmer's *umi*) "house," &c. (*Vide* § 423.)

MASCULINE PLURAL.

||Nā au-gu, si-da !hau-s-di-gu, |ni !ā-s-!na ||an-hā-gu, ho-
Those men our tribe's they, another village-in dwelling, find
gu-da-ra, gare-da-ra goma-n ā-g-a, tsī-gu-gye-ra |hai-da |gam
them we do, praise we do cattle of them, and they do present us two
tsāu-n ||ēi-gu-di-n-χa.
calves theirs from.

The men of our tribe who dwell in that village, we find them, we praise their cattle, and they present us with two of their calves.

||Nā !nau-gu tara-s-di-gu, ||nū-gu gei-gu, om-mi-!na ||goē-gu, mū-
Those beams woman's they, those large, house-in lying, see
gu-da-ra, ||ēi-gu-di ||ou-g-a da-ra mū-~~an~~, tsī-da ī-p
them we do, their thicknesses we do perceive, and we appearance
ā-g-a ra |nam, tsī-gu-gye om-m-a ra ~~khā~~-!na.
of them do like, and they house do support.

The beams which belong to the woman, which are large and lie in the house, we see them, we perceive their thickness, and like their appearance, they support the house.

To this class or gender (masculine plural) belong all nouns terminating in **-gu** (Knudsen's and Tindall's **-ku**, Schmelen's **-koe**), most of which are plurals to nouns of the preceding (**-p**) class or gender.

MASCULINE DUAL.

//Nā |gam au-kha, si-da |hau-s-di-kha, |nī |ā-s-!na ||an-hā-kha,

Those two men, our tribe's they, another village-in dwelling,
hō-kha-da-ra, gare-da-ra goma-n ā-kha, tsī-kha-gye-ra |kai-da
find them we do, praise we do cattle of them, and they do present us
|gam tsāu-n ||ēi-kha-di-n-χa.

two calves theirs from.

The two men of our tribe, who dwell in that village, we find them, we praise their cattle, and they present us with two of their calves.

//Nā |gam !nau-kha, ta-ra-s-di-kha, gei-hā-kha, om-mi-!na

Those two beams, woman's they, large being, house-in
||goē-hā-kha, mū-kha-da-ra, ||ou-p ā-kha da-ra mū-~~an~~, tsī-
lying, see them we do, thickness of them we do perceive, and
da i-p ā-kha ra |nam, tsī-kha-gye om-m-a ra ≠hā-!na.
we appearance of them do love, and they the house do support.

The two beams which belong to the woman, which are large and lie in the house, seeing them we perceive their thickness, we like their appearance, they support the house.

This class or gender (masculine dual) includes all nouns terminating in **-kha**, which are all dual forms corresponding to nouns which in the singular end in **-p**, **-mi**, or **-ni**, &c.

FEMININE SINGULAR.

//Nā tara-s si-da |hau-s-di-s, |khu-hā-s, |nī |a-s-!na ||an-hā-s,

That woman our tribe's she, rich being, another village-in dwelling,
ho-si-da-ra, gare-da-ra goma-n ā-s-a, tsī-s-ta |kai-da
find her we do, praise we do cattle of her, and she does present us
|gam tsāu-n ||ei-s-di-n-χa.

two calves hers from.

The woman of our tribe, who is rich and lives in that village, we find her, we praise her cattle, and she presents us with two of her calves.

Hei-s tara-s-di-s, //ēi-s gei-s, /hana-p-!na mā-s, mū-si-da-ra,
 The tree woman's it, it large, garden-in standing, see it we do,
//ēi-s-di //ou-b-a da-ra mū-~~an~~, tsī-da ī-p ā-s-a ra /nam,
 its thickness we do perceive, and we appearance of it do like,
tsī-s-gye /hana-b-a ra ē-ē.
 and it the garden does make fine.

The tree which belongs to the woman, which is large, and stands in the garden, we see it, we perceive its thickness and like its appearance ; it is an ornament to the garden.

To this class or gender (feminine singular) belong all nouns terminating in -s.

FEMININE PLURAL.

//Nā tara-tī, sida /hau-s-di-ti, /nī !ā-s-!na //an-hā-ti, hō-ti-
 Those women our tribe's they, another village-in dwelling, find them
da-ra, gare-da-ra goma-n ā-te, tsī-ti-gye-ra /hai-da /gam tsāu-n
 we do, praise we do cattle of them, and they do present us two calves
//ēi-ti-di-n-χa.
 theirsfrom.

The women of our tribe who live in that village, we find them, we praise their cattle, and they present us with two of their calves.

Hei-tī tara-s-di-ti, //ēi-ti gei-ti, //ēi-ti /hana-p-!na mā-ti, mū-
 Trees woman's they, they large, they garden-in standing, see
ti-da-ra, //ēi-ti-di //ou-b-a da-ra mū-~~an~~, tsī-da ī-p
 them we do, their thickness we do perceive, and we appearance
ā-te ra /nam, tsī-ti-gye /hana-b-a ra ē-ē.
 of them do like, and they the garden do make fine.

The trees which belong to the woman, which are large, and stand in the garden, we see them, we perceive their thickness and like their appearance ; they are an ornament to the garden.

This class or gender (feminine plural) comprehends all nouns with the termination -tī. They are plurals to nouns of the preceding (-s) class or gender.

COMMON SINGULAR.

Khoi-ī si-da !hau-s-di-i, !khu-hā-ī, nī !ā-s-!na ||an-hā-ī, hō-

A person our tribe's he, rich being, another village-in dwelling, find
i-da-ra, gare-da-ra goma-n ā-ē, tsī-i-gye-ra |kai-da |gam
him we do, praise we do cattle of him and he does present us two
tsāu-n ||ēi-i-di-n-χa.

calves his from.

A person of our tribe who is rich, and lives in that village, we find
him (or her), we praise his (or her) cattle, and he (or she) presents
us with two of his (or her) calves.

Hei-ī tara-s-di-ī, ||ēi-ī gei-ī, om-mi-!na ||goē-ī, mū-i-da-ra,

The stick woman's it, it large, house-in lying, see it we do,
||ēi-ī-di ||ou-b-a da-ra mū-~~an~~, tsī-da ī-p ā-ē ra |nam, tsī-
its thickness we do perceive, and we appearance of it do like, and
i-gye om-m-a ra z-ē.

it the house does make fine.

The stick which belongs to the woman, which is large and lies in
the house, we see it, we perceive its thickness, and like its appearance;
it is an ornament to the house.

To this class or gender (common singular) belong all nouns formed
with the termination **-i**, exclusive, of course, of those in **-mi**, **-ni**,
&c., of the masculine singular (**-p** class), and of those in **-ti** of the
feminine plural. This termination **-i** imparts a kind of indefinite
sense, in many cases corresponding in meaning to our indefinite article,
or to the word "any," &c. Nouns formed with this termination are
infrequent even in the Nama, and seem no longer to exist in the
other Hottentot dialects. Also in the more Northern Sex-denoting
languages, no trace of this class or gender has been, as yet,
discovered.

COMMON PLURAL.

||Nū khoi-m, si-da !hau-s-di-n, nī !ā-s-!na ||an-hā-n, hō-

Those people our tribe's they, another village-in dwelling, find
jīn-da-ra, gare-da-ra goma-n ā-n-a, tsī-īn-gye-ra |kai-da |gam
them we do, praise we do cattle of them, and they do present us two
tsāu-n ||ēi-n-din-χa.

calves theirs from.

The people of our tribe who dwell in that village, we find them, we praise their cattle, and they present us with two of their calves.

This class or gender (common plural) comprehends all nouns with the termination **-n**, most of which are plurals to nouns of the preceding (common singular) class.

COMMON DUAL.

//Nā |gam khoi-**ra** si-da |hau-s-di-**ra**, mī |ā-s-|na ||an-kā-**ra**,
Those two persons our tribe's they, another village-in dwelling,
hō-ra-da-**ra**, gare-da-**ra** goma-n ā-ra, tsī-ra-gye-**ra** |hai-da
find them we do, praise we do cattle of them, and they do present us
|gam tsāu-n ||ēi-ra-di-n-**χa**.
two calves theirs from.

Those two (a man and a woman, or two women) of our tribe who dwell in that village, we find them, we praise their cattle, and they present us with two of their calves.

This class or gender (common dual) includes all nouns with the termination **-ra**. They are duals to nouns of the common and feminine singular classes (**-i** and **-s**).

423. Though the signs of the concord are not so frequently repeated here as in the Bâ-ntu languages, it is evident that its nature is the same; viz., that it consists in the identity of the pronouns (or pronominal elements) with the derivative particles, (§ 406, 410,) which, however, in Hottentot are suffixed, not prefixed, as in the Bâ-ntu languages. This identity is even clearer in the Namaqua dialect, than in the Kafir and kindred languages; for, the forms of the pronouns in Namaqua, are either the same as those of the terminations of the nouns, or they are so manifestly derived from them as to render it hardly necessary to say a word in explanation of the slight variations which occur. The two chief exceptions to this rule are the forms of the objective pronominal suffixes of the verb in the masculine singular and feminine singular classes or genders. These forms (**-bi** and **-si**) have probably retained the ancient vowel which has

generally been lost in the forms of the pronouns, as well as in those of the derivative suffixes of the nouns. The original vowel of the termination of the masculine singular has again been preserved, as a derivative suffix, where the labial consonant of this termination is either assimilated to a consonant ending the stem (*-m-*, *-n-*, and perhaps *-r-*), or elided after it. For example, this is the case in *om-mi* house (objective *om-m-a*, pl. *om-gu*, dual *om-kha*), *!hom-mi* mountain (obj. *!hom-m-a*, pl. *!hom-gu*, dual *!hom-kha*), *!nom-mi* hillock (obj. *!nom-m-a*, pl. *!nom-gu*, dual *!nom-kha*), *!om-mi* hand (obj. *!om-m-a*, pl. *!om-gu*, dual *!om-kha*), *χam-mi* lion (obj. *χam-m-a*, pl. *χam-gu*), *||gam-mi* water (obj. *||gam-m-a*, dual *||gam-kha*), *ausen-i* perspiration (obj. *ausen-a*), &c.*

424. If the nature of the concord in the Hottentot language is thus similar to that in the Bâ-ntu Languages, —its peculiar sex-denoting character in the Hottentot might suggest that the identity of the pronouns and the derivative particles of the nouns (and, consequently, the cause of the division of the nouns into classes or genders,) may have a different origin in the two families of South African Languages; and that the derivative suffixes of the nouns in Hottentot were originally pronouns, as some grammarians (Knudsen, &c.) maintain.

* We do not find it noticed in any of the grammatical works on this language (by Messrs. Knudsen, Wallmann, and Tindall) that these nouns are of the masculine singular class or gender. On the contrary, the two first of these writers, at least, class them in the common singular gender. That this is an error, is evident from the fact that all pronouns referring to these nouns belong to the masculine singular class or gender. Another feature which distinguishes these nouns from those of the common singular class or gender, is that when they are used with the termination *-a* (indicating the objective, &c.), their end *-i* is suppressed before the *-a*, instead of (as in all nouns of the common singular class) being commuted by a process of vowel harmony, into *-e*, after which the suffix *-a* disappears. These nouns can be further recognized as belonging to the masculine singular class (or gender), from their exchanging their singular termination *-mi* or *-i* for *-gu* (masculine plural) and *-kha* (masculine dual).

(§ 411.) Such an explanation appears plausible, so long as we have only to do with nouns to which the distinction of sex is naturally applicable. Thus in *khoi-p* man (husband), *khoi-gu* men (husbands), *khoi-kha* two men (husbands), *khoi-s* woman, *khoi-ti* women, *khoi-i* person, *khoi-n* people, *khoi-ra* two persons (man and woman, or two women), &c., the terminations might with some semblance of probability be concluded to be pronouns affixed for the purpose of distinguishing number and gender. But a similar explanation is inapplicable, when we observe the use of these terminations, with regard to nouns expressing objects, in which sex cannot be distinguished,—for example, *mū-p* eye (as an object in space, *mū-p-/na* in the eye, &c.), pl. *mū-gu*, dual *mū-kha*; *mū-s* the organ of vision, pl. *mū-ti*, dual *mū-ra*; *hei-p* log of wood, beam, pl. *hei-gu*, dual *hei-kha*; *hei-s* tree (growing), pl. *hei-ti*, dual *hei-ra*; *hei-i* stick, pl. *hei-n*, dual *hei-ra*; *om-mi* house (*oikós*), pl. *om-gu*, dual *om-kha*; *om-s* habitation (*oikta*), pl. *om-ti*, dual *om-ra*; *om-i* any house, pl. *om-n*; *tsē-p* day (as a date, “jour”), pl. *tsē-gu*, dual *tsē-kha*; *tsē-s* day (as a period, “journée”), pl. *tsē-ti*; *tsē-i* any day, pl. *tsē-n*, dual *tsē-ra*; &c. With many shades of meaning, the termination of the masculine singular class or gender most frequently indicates the idea of locality; that of the feminine singular implies causality, life, essence, &c. These meanings could only be derived with great violence from an original intention of transferring the sex-denoting distinctions to nouns, to which they are not strictly applicable.* On the

* As the translator of the New Testament into Namaqua is of a different opinion regarding the distinction of gender in Hottentot, the reader will thank me for subjoining his observations on the subject. Mr. Krönlein says: “In Bezug auf die Unterscheidung des Geschlechtes bemerke ich folgendes:

“Bei den lebendigen Wesen ergibt sich das Geschlecht von selbst. Sie sind entweder Masculina oder Feminina. Kenne ich aber das Geschlecht des betreffenden Wesens noch nicht, so rede ich im Communis, z. B. *Mā/goa ē-s gye hō*? (Was für ein Kind gebär sie?) Die Antwort

contrary, it is far more probable that the terminations

lautet entweder *ao-re-ro-ḡ-a* (ein Männlein) oder *ta-ra-re-ḡ-a* (ein Weiblein). *Ta-re-be hā-ē kha ne-ē?* (Was für ein Pferd ist das?) \neq *Kara-hā-ḡ gymo.* (Es ist der Hengst.) \neq *Nū hā-ḡ gymo.* (Es ist die schwarze Stute.) &c.

“In Bezug auf die leblosen Gegenstände gilt die Regel, welche ganz der subjectiven Ansicht des Redenden anheimgegeben ist:

“a. Dass alle Gegenstände, die man sich als *gross* und *hervorstechend* denkt, **männlich** aufgefasst werden, z. B. *hei-ḡ* (m. s.) ist der Baum, der durch seinen schlanken, über die andern hinausgehenden Wuchs sich auszeichnet. *Om-mī* (m. s.) ist das Haus, welches durch seine Grösse und Ansehnlichkeit andere übertrifft, &c.

“β. Alle Gegenstände dagegen die *kleiner* oder *kürzer* sind, und mehr in die *Breite* gehen als in die *Höhe*, sind **feminin**, z. B. *hei-s* ist der Baum, der einen kurzen Stamm hat, aber seine Zweige gehörig ausbreitet (Bild der Hottentoten Frauen), oder auch wohl der gewöhnliche Busch oder Strauch. *Om-s* (f. s.) ist das Haus, welches gegen andere in seiner Höhe und Dimension zurücksteht.

“In Bezug auf *mū-s* (f. s.) und *mū-ḡ* (m. s.) ist *mū-s* am gebräuchlichsten. *Mū-ḡ* wird nur in solchen Fäbten gebraucht, wo sich der Redende das Auge dessen, von dem er redet, als durch böse Einbildung oder Einflüsterung als *vergrössert* denkt, z. B. *sa mū-b-ḡna ta a ḡkawa, ḡawe-ta /ḡna-ti-i tama hā* (in deinem Auge bin ich böse, aber ich bins nicht). In den Abstractas kommt es nur darauf an wie sich der Gebrauch gebildet, oder wie sich der Redende den abstracten Begriff denkt: \neq *gom-s* (f. s., Glauben), \neq *hanu-ei-si-ḡ* (m. s., Gerechtigkeit), *ḡu-ba-ḡen-s* (f. s., Hoffnung), *ḡam-mī* (m. s., Liebe), &c.

“Der **Communis**: *om-ī* (ein Haus, pl. *om-m*), *hei-ī* (ein Stock, pl. *hei-m*), *tsē-ī* (ein Tag, pl. *tsē-m*), ist selbst verständlich. Er lässt den Begriff unbestimmt.

“Ausser dem Gebrauch, der sich *festgebildet* bei einer *grossen Anzahl von Wörtern*, hängt die Geschlechtsbestimmung also rein von der Anschauung und dem subjektiven Ermessen des Redenden ab, und er wird sogleich verstanden, warum er seinen Gegenstand so oder so auffasst.”

To this I may add the remark that *mū-ḡ ḡna* (*moep na* “in the eye”) is found in Schmelen’s version of the Four Gospels, Matth. vii. 3 (twice), 4 (twice), and 5. In these places both Tindall and Krönlein have *mū-s-ḡna*. The masculine form *mū-ḡ*, &c., &c., is nowhere met with in Tindall’s version of St. Matthew’s Gospel, nor, I believe, in Krönlein’s New Testament.

The gender may have to a certain extent the import which Mr. Krönlein ascribes to it; but this is clearly a derived faculty, and can by no means be said to apply to all, or even to the majority of nouns indicating inanimate things or ideas in Hottentot.

which indicate the class or gender of the nouns in the Namaqua language, were originally derivative particles, similar in their nature to the derivative prefixes in the Bâ-ntu languages; and that the origin of the division of the nouns in both languages into classes or genders is based upon the same principle. The apparent sex-denoting character which the classification of the nouns now has in the Hottentot language, was evidently imparted to it, after a division of the nouns into classes had taken place. It probably arose, in the first instance, from the possibly accidental circumstance that the nouns indicating (respectively) man and woman were formed with different derivative suffixes, and, consequently, belonged to different classes (or genders) of nouns, and that these suffixes thus began to indicate the distinctions of sex in nouns where it could be distinguished.

425. It may be assumed that the original meaning of the derivative suffixes of the nouns in Hottentot has been impaired and modified, and that they by no means impart as full a meaning as some of the prefixes in the Bâ-ntu languages, and are, therefore, still less equal in value to the derivative suffixes of modern languages. (§ 415.) Yet there can, however, be no doubt that their origin is similar, and that if our explanation of the nature and origin of the concord holds good for the Bâ-ntu languages, it is equally applicable to the Hottentot. But, in order to be more certain concerning this, we must proceed to examine how far we can ascertain the original meaning of the derivative prefixes and suffixes, on which the division of the nouns into classes or genders is respectively based in the Bâ-ntu and Hottentot languages.

II. ETYMOLOGY OF THE CONCORD-INDICATING DERIVATIVE PARTICLES OF THE NOUNS.

1. ETYMOLOGY OF THE BÂ-NTU DERIVATIVE PREFIXES.

426. As the derivative prefixes of the nouns in the Bâ-ntu languages are no longer used separately, it is now somewhat difficult to ascertain what was their exact meaning while so employed. There are two ways of ascertaining this, approximately. The power which these prefixes apparently possess for the formation of derivative nouns, and the general character of the nouns belonging to the same class or gender, tend to point towards the meaning which the prefix had, when still a separate word. But this alone is by no means a safe guide. It is possible that in many nouns, perhaps sometimes in the majority of those belonging to one class, the prefix has not its original value, but only that of a pronoun, from these words having been originally adjectival formations. For example, a great number of nouns of the 1st (**mu-**) class or gender may have been, originally, adjectives referred to u-**mu-ntu** "man;" and, in that case, the *mu-* in them would be only a pronoun used as representative of u-**mu-ntu**, whilst the *mu* in u-**mu-ntu** might originally have had quite a different meaning. (*Vide* § 412.) Yet, it is, of course, also possible that the original meaning of the **mu-** in u-**mu-ntu** is that of a single person, and that, on this account, the nouns of the 1st (**mu-**) class almost all represent personal beings in the singular number.

427. Similarly, a great number of names of rivers are formed in Zulu with the prefix **mu-** (3rd class)*. Yet

* *Umzimvubu*, (Sea-cow River), *Umzinto*, *Umzumbe*, *Umlazi*, *Umzimkulu*, *Umχ'langa*, *Umχ'loti*, *Umχ'latuzane*, *Umχ'lali*, *Umsunduze*, *Umtytwati*, *Umkomazi*, *Umpanza*, *Umluku*, *Umkeze*, *Umvoti*, *Ungeni*, *Umnambiti*, *Umtwalume*, *Umbilo*, *Umzimayi*, *Umzimkulwana*, &c. (Colenso's Dictionary.)

it would be rash to infer from this that the original meaning of the prefix **mu-** (3rd class), when still an independent noun, was "river." It is indeed more probable that these nouns were either formed as adjectives referring to the Zulu noun *umfula* "river," (the Kafir *umlambo*, Setshuâna *molapo*, Tekeza *nambo*,)—or in mere analogy with this and similar nouns.

428. Still greater, perhaps, is the number of names of trees formed with this prefix **mu-** (3rd class). We find about a hundred such nouns in the Bishop of Natal's Zulu-English Dictionary, and about fifty in the considerably shorter Dictionary of the Otyihereró, or Damara language, by the Rev. C. H. Hahn. In many other South African languages equally numerous examples of names of trees formed with this prefix **mu-** occur; yet we are not, on this account, justified in asserting that the original meaning of this syllable **mu-**, when used separately, was that of a "tree" or "plant." It is, upon the whole, much more probable that these nouns were formed in analogy with the generally used noun **u-mu-ti** 3. "plant, herb, tree, wood, medicine," pl. **i-mi-ti** 4.* That the last syllable **-ti** has the meaning of vegetable matter here, is rendered probable by other nouns formed from this stem, such as Kafir **u-lu-ti** 11. "rod, stick," pl. **i-zin-ti** 10., Otyihereró **o-ka-ti** 13. "stick," pl. **o-u-ti** 14., Kafir and Zulu **u-bu-ti** 14. "poison, charm," Sena, Tette, and Cape Delgado **ka-mu-ti** 13. "shrub" (Kikámba **ka-mu-di** 13., pl. **tu-mi-di** 12.), &c.

429. How difficult it is in this manner to infer the original value of the prefixes of nouns from their present use, will be easily understood by any one who may have

* Kafir **u-mu-ti** 3., pl. **i-mu-ti** 4., Southern Tekeza **u-tsi** 3., pl. **i-mu-tsi** 4., Lourenço Marques and Quelimane *mure*, Inhambane *muri* (m), Tette, Sena, and Cape Delgado **mu-ti** 3., pl. **mu-ti** 4., Mosambique *muiri*, Suahéli **mu-ti** 3., pl. **mu-ti** 4., Kinika and Kipokómo **mu-ti** 3., pl. **mu-ti** 4., Kikámba **mu-ti** 3., pl. **mu-ti** 4., Otyihereró **o-mu-ti** 3., pl. **o-mu-ti** 4., Ovambo **u-mu-ti** 3., Benguela **o-u-ti** 3., pl. **o-u-ti** 4., Bunda **mu-shi** (muchi) 3., pl. **mu-shi** 4.

tried to ascertain the original meaning of such English suffixes as *-dom*, *-ness*, *-ship*, &c., from an analysis of the nouns formed with them. A comparison of such nouns as "kingdom, martyrdom, freedom," &c., may give us an idea of the present value of the suffix *-dom*, and of the meaning which it would give to such nouns as we can now form with it. But this is a very different thing from knowing what was the meaning of the syllable *-dom* when used independently; and we imagine that any guess at that meaning, without tracing it back historically, might be far from the truth.

430. This difficulty is the greater, as the different languages and dialects (though agreeing in the main regarding the value attached to each class of nouns and in the prefix denoting it,) exhibit much variety as to the exact force which each prefix has in them. To give an instance, whilst in the three other genera of the Middle Branch the prefix *ka-* of the 13th class is used for the purpose of forming diminutives, it appears not to have this force in the North Western (Kongo) genus. In the Kongo language the only nouns of the 13th (*ka-*) class (or gender,) enumerated in Brusciotto à Vetralla's Grammar, are *ka-ti-a-nzi* 13. "the middle" (*vide* § 436, note) and *ka-sasila* 13. "height." Curiously enough, diminutives are formed in this language with the prefix of the 7th class *ki-*, joined to a reduplication of the stem, as *ki-mu-ntu-mu-ntu* 7. "a little man" (§ 426), *ki-leke-leke* 7. "a little boy," pl. *1-lekeleke* 8. from *mu-leke* 1. "a boy," pl. *a-leke* 2; whilst this same 7th prefix in Tette (*tshi-* or *shi-*) and Sena (*shi-*) is employed for the purpose of indicating large objects, as Sena *shi-mu-ti* 7. "a large tree," pl. *pi-mi-ti* 8. (§ 428, note), Tette *tshi-u-ta* 7. "a large bow," *tshi-mā-zi* 7. "large water, river" (§ 452), *tshi-nyumba* 7. "large house." In Otyihereró again *o-tyi-ndu* 7. is "an old man or woman," whilst in Kafir the identical word *i-si-ntu* 7. means "human species," and in Zulu "human race, mankind." (§ 412.) It is clear that there is a very

great difference in the meanings which the 7th prefix has respectively in Kongo and Tette, in Otyihereró and Kafir.

431. Another circumstance which contributes much to complicate this mode of investigation, is that we cannot always be sure whether two or more classes or genders of nouns may not have been thrown together. This process would always be favoured by great similarity in the forms of the derivative prefixes and the pronouns derived from them, by similarity in the value of the prefixes, or by both causes combined. The history of the South African languages (as we shall see more especially hereafter,) shews many clear instances of these three ways, by which classes that were originally distinct, have been amalgamated.

432. Therefore we should probably be unable to ascertain anything of the original meanings of the derivative prefixes of the nouns in these South African languages, if this were the only method of discovering them. But although we do not now find the prefixes used in their separate state as independent nouns, some of them are still found as other parts of speech, particularly as prefixed directives or prepositions; or, as the case might also be represented, there are some other words, particularly prepositions, which seem to be closely related to, if not originally identical with, certain derivative prefixes of nouns.

433. Thus there cannot be the least doubt that the derivative prefix *ku-* of the 15th class or gender, is identical with the prefixed directive, or preposition *ku-* which means "to." In fact, the employment of this preposition for the formation of the infinitive of verbs, is analogous to that of the corresponding English preposition. Thus, in Zulu *ngi-ya-ku-tanda*, (I shall love,) which is literally "I go to love," (just as *ngi-ya ku-laba-bantu* means "I go to these people,") the *ku* is merely used as a directive like the "to" in "to love;" whilst in the sentence

u-ku-tanda ku-mnandi, "to love is sweet," the first *ku* is used as a derivative prefix, to which the second *ku* refers as a pronoun. But no one can doubt here that the prefixed directive (or preposition) and the derivative prefix are identical in origin.

434. Besides the clear infinitives of verbs used as nouns, there are, in almost all South African Bâ-ntu languages, a number of nouns belonging to this 15th class or gender, which were originally infinitives, but have now a more concrete meaning. Such are, for example, Kafir *u-ku-ŋla* "food," (really "eat-ing,") *u-ku-sa* "morning," and *u-ku-ŋhwa* "evening," which latter words both mean "dawn-ing," the one the early dawn, the other the growing dark at sunset. The Middle Branch languages also contain a number of nouns of this class or gender, which evidently were not infinitives of verbs originally, such as the Otyihereró nouns *o-ku-ngururu* "desert," *o-ku-ti* (Ovambo *o-ku-ti*) "field, country land," pl. *o-ma-ku-ti* 6., *o-ku-vare* "a great open place," *o-ku-yere* "flats, open place," *o-ku-ruo* "sacred place for the holy fire" &c., *o-ku-ara* "floor (of a hut)," *o-ku-pepera* "winter," *o-ku-roro* "rainy season (autumn)." In these nouns which indicate place and time, the common origin of that prefix *ku-* and the preposition *ku-* (to) is almost self-evident. This is not quite as clear in the following Otyihereró nouns, which also belong to the 15th class or gender, viz., *o-ku-iyá* "thorn," pl. *o-ma-ku-iyá* 6. (Ovambo *o-ku-edya* 15., pl. *o-ma-ku-edya* 6.), *o-ku-rama* (Ovambo *o-ku-lama*) "leg," *o-ku-oho* "arm," (Ovambo *o-ku-ého* 15., pl. *o-ma-ého* 6.), *o-ku-tui* "ear," pl. *o-ma-tui* 6.*

435. An almost equally strong case of original identity with a prefixed directive (or preposition) is presented by

* Ovambo *o-ko-tshui* 15. pl. *o-ma-ko-tshui* 6., Bashubea *kotoe*, Batoka *khotoe*, Maponda and Borotse *kutoe*, Banyenke *kutue*, Bayeiye *kuti*, Tette and Sena *kutu* pl. *ma-kutu* 6., Kikamba *ku-dũ* 15. pl. *ma-du* 6., Kongo *ku-tu* 15. pl. *ma-tu* 6., Mpongwe *o-roi*.

the derivative prefix (PA-) of the 16th class or gender. In the dialects of the South Eastern Branch of the South African Division of Bâ-ntu languages, (Kafir, Setshuâna, and Tekeza,) this prefix is obsolete, though clear traces of its former existence are still found, at all events, in the Kafir species and in Setshuâna. Some of the forms of the pronouns of the 15th (ku-) class or gender, in both species, evidently belonged originally to the 16th (pa-) class; and the 16th may be said in these languages to have been absorbed by the 15th (ku-) class. In Setshuâna this amalgamation was facilitated by the change of original *k* to *x* or *h*, and *p* to *h*. (§ 87 & 110.) Thus, it became difficult to distinguish apart those forms of the pronouns, in which the original vowels of these prefixes were elided. In many Middle Branch languages the 16th (pa-) class or gender has continued distinct, but generally contains a few nouns only, in some languages, perhaps, not more than one. Thus we find in the language of Nyungwe (Tette) *pa-zuru pa-muendo* "span of the foot," i.e., "what is above the foot." (Dr. Peters' Mosambique Voc. No. 179.) In Kisuahéli the noun *maháli* or *paháli* belonging to this 16th (pa-) class* seems to indicate that the Setshuâna noun *hélo* "place" which is the only noun, not an infinitive, now belonging to the 15th class in this language, was originally a noun of the 16th class. In Kiníka we have the noun *vatú*,† in Kipokómo *wa-ntu*, in Kikámba *wa-ndu* (as *wa-ndu w-onde* "everywhere"), in Kihíau *pa-ndu* (as *pa-ndu pa motto* "fire place"), expressing the same meaning. The corresponding word in Otyihereró is *o-po-na* (as *o-po-na pa-ndye o-po-mba* "my place is here"), and in this language we have also a few other nouns of the 16th class

* Krapf's Outlines pp. 37, 43, 78, 81, 82, 84, 85, 90, 96, 97, as in *mahali* or *pahali* *pa raho* "place of rest." Vide Dr. Steere's "Table of Concords."

† Krapf's Outl. pp. 36, 38, 78, 81, 84, 85, 90, as in *va-tu va atu* "place of men."

or gender; whilst in the other Western languages of the Middle Branch, traces of this class have as yet been discovered in the old Kongo language only, and it cannot, even there, be proved to exist now as a distinct class of nouns. Among the dialects of the North Western Branch it is possible that the Isubu noun *oma* (as in *oma wa songgo* "place of graves," *wano oma* "this place") belongs to the 16th class or gender.

436. As to the origin of the prefix of the 16th class or gender, the nouns of which, few as they are, all indicate locality, there cannot be the least doubt that it is identical with the local preposition (or prefixed directive) *pa-*, found in so many South African Bâ-ntu languages. In Kafir and Zulu this *pa-* is no longer used as a regular directive, but occurs with the directive meaning in certain adverbial forms (used also as prepositions), which are derived from nouns, most of which are now obsolete. Appleyard (§ 319) derives *pan̄le* "outside" from *in̄le* 9. "field," *pantsi* "beneath" from *izantsi* "lower part" (Zulu *inzansi*), *pezolo* "last night" from *izolo* "yesterday," *pezulu* "above" from *izulu* "heaven." But to these must be added the Kafir and Zulu preposition *pakati* (Setshuâna *haḫare*) "within, between, among, inside, in the middle," which is a sort of locative form of an obsolete noun of the 14th (*ka-*) class*, (a gender which is now extinct in the South Eastern Branch;) also the Zulu and Kafir prepositions and adverbs *pambili* "in front of," *pambi* "before," *pesheya* (Zulu *petsheya* according to Colenso) "beyond, on the other side," &c. In Western Setshuâna this particle has the sound of *ha* and is still used as a preposition, as Mark xiv. 35, *a oëla ha hatsi* "he fell down *on* the ground." In some of the Middle Branch languages *pa* is more generally used either as a prefixed particle, or as a preposition, and has the same form *pa* in Inhambane, Sofala, Tette, Sena, Maravi, Kibiau, &c. In Otyihereró this preposition has, generally speaking,

* Compare also the Otyihereró prepositions *mokati* and *pokati*.

lost its vowel before the initial vowel of the noun (the article), but Hahn records its form as *pu-*, the labial quality of the vowel being probably in some manner due to the influence of the labial consonant which precedes it.

437. A third prefix, that of the 3rd class or gender, is also one in which the meaning of many of the nouns formed with it, renders it probable that it is allied to a directive bearing in most of these languages the same form. This prefix is **mu-** and **m-** in Zulu, **m-** in Kafir, **mo-** in Setshuâna, **mu-** in most Middle Branch languages (except in Mpongwe, which has shortened it to **o-**); in the North Western Branch, again, it is in Dualla and Isubu **mo-**, in Benga **mw-** and **u-**, in Fernando Po **bo-**, &c.

438. We claim for this prefix an original identity with the prefixed directive or preposition *mu-* of the Kongo language, as *mu-n-zo* 9. "in the house." This preposition occurs in the same or similar forms in many Middle Branch languages; it is for example **m-** or **mo-** in the South Western genus, as Otyihereró *m-o-n-dyuo* "in the house." In Setshuâna it has the form *mo* (*mo-ǃlu-ni* "in the house"); but it is extinct in Kafir, which uses in its place a prefixed *se-* or *e-*, in conjunction with an affixed *-ini* or *-eni* (Setshuâna *-en*), as (*s*)*e-n-ǃlu-ni* "in the house."

439. The local meaning of many nouns formed with the derivative prefix of the 3rd (**mu-**) class (or gender) is still very clear, as in the following Kafir nouns: *u-m-pambili* "front" (*pambili* "before" § 436), *u-m-lima nǃlela* "land mark" (*lima* "dig, plough, cultivate," *i-n-ǃlela* 9. "way, road"), *u-m-mango* "ridge," *u-m-nyango* "doorway," pl. *i-mi-nyango* 4., *u-m-ǃlaba* "earth," *u-m-da* "boundary," pl. *i-mi-da* 4. (*-de* "long," *vide* § 362), *u-m-va* "back," *u-m-lomo* "mouth,"* *u-m-zi* (Zulu *u-mu-zi*) "kraal,

* The Kafir and Zulu noun *u-m-lomo* "mouth" (Setshuâna *mo-lomo*, Tekeza *nomo* § 343, Sofala, Sena, and Tette *mu-rômo*, Quellimane *mu-lômo*, Maravi *mo-lômo*, Dualla and Isubu *mo-lumbu*), may be

place, residence," pl. *i-mi-zi* 4., *u-m-tombo* "fountain," pl. *i-mi-tombo* 4., and also such nouns as *u-m-ǎla* (Zulu *u-mu-ǎla*) "day," pl. *i-mi-ǎla*, *u-nyaka* 3. (Zulu *u-m-nyaka*) "year," pl. *i-mi-nyaka* 4., *u-m-zuzu* "some time, a-while," *u-m-so* (Zulu *u-mu-so*, Setshuâna *mo-sho*) "morrow, morning," from *u-ku-sa* 15. "to dawn." (§ 434.)

440. The number of nouns of the 3rd (*mu-*) class or gender, which have a clearly local meaning, is comparatively smaller in Otyihereró than in Kafir; but this may be because a large number of ancient nouns of this class have been lost in Otyihereró, and new ones have arisen, in which the prefix has not so much the original derivative meaning, as one of a reflected kind. (§ 426—428.) On the whole, however, it is not only possible, but probable, that two or more classes of nouns, originally distinct, have by similarity of their prefixes (and pronouns) coalesced (§ 431), and that one of these prefixes was identical with the directive (or preposition) *mu-* "in."

441. With regard to other derivative prefixes of nouns, all that can be said, is that more or less successful guesses may be made at the etymology of some of them. It may be that the prefix *li-* of the 5th class or gender was originally identical with the derivative suffix of respective verbs in *-el-a* (which, according to § 270 and 271, must originally have had the form *-ǎ-LE-A* or *-ǎ-LI-A*), and that, similarly, the prefix of the 11th class or gender

derived from Kafir and Zulu *u-ku-luma* 15. "to bite," (Setshuâna *xo-loma*, Tekeza *e-ko-luma*, Sena and Tette *kuu-râma*, Makua *uu-lâma*, Cape Delgado, Kihiau and Kinika *kuu-lâma*, Kikâmba, Kisuaheli, and Kipokomo *kuu-âma*, Otyihereró *o-kuu-rumata*, Ovambo and Bunda *o-kuu-lumata*, Mpongwe *go-noma*). This etymology will, however, appear doubtful to many, on account of the difference of the vowel of the stem in Kafir *um-lomo* and *uku-luma*; though the influences of vowel harmony will account for this change. In fact, in a noun of as ancient formation as *um-lomo* clearly is, the final passive suffix *-o* could hardly be expected not to have exerted an influence upon the preceding vowel of the stem. If this etymology is right, *u-mu-lomo* originally indicated the place where there is biting, or rather, where there is being bitten, i.e., where one bites.

lu- is related to the suffix of inersive verbs in **-ul-a** (originally **-ŋ**-LU-A). There is, at all events, a probability that the prefix of the 7th class or gender (of which the forms **ki-**, as found in Kikamba, Kinika, Kisuaheli, Bunda, Kongo, and Kakongo, and **si-**, as found in Kafir, **se-** in Setshuâna, **z-** in Mpongwe, are most likely identical in their origin)*, is allied to the suffixes of causative verbs in **-is-a** and **-ik-a**, of which the primitive forms must be supposed to have been **-ŋ**-SI-A and **-ŋ**-KI-A. The meaning of many nouns of the 7th class (as Kafir **i-si-vato** 7. "apparel," pl. **i-zi-vato** 8. from **u-ku-vata** 15. "to dress," **i-si-fo** 7. "disease, sickness," pl. **i-zi-fo** 8. from **u-ku-fa** 15. "to die," &c.,) seems much to favour such a derivation. And with regard to the derivative prefix **ka-** of the 13th class or gender, which is now found only in the Middle Branch languages, (*vide*, however, § 436,) and generally with a diminutive meaning, we can hardly help comparing it with the prefixed genitive particle **ka-** ("of"), employed in Kafir with certain nouns (§ 463), and also (though more restricted in its use) in Setshuâna, where it has the form **χa** (written **ga**) according to § 87 and 381.

442. All that can be said is that none of these derivations is impossible; but it must be observed that (as stated in § 261—265) the formative or grammatical portions of most languages (and particularly of the South African tongues) are reduced to a very small number of sounds, and that the difficulties in pronunciation are made to disappear much more rapidly here than in other parts of speech. On this account, the cases of homophony of grammatical elements, quite distinct in their origin, are of such frequent occurrence, that a coincidence in form between two grammatical elements can by no means be considered as a proof of their original identity,

* There are between them the intermediate forms, **tyi-** of the Otyhereró and Benguela, **tshi-** and **shi-** of Lourenço Marques, Tette and Sena.

or even of their derivation from a common source. Etymology is, therefore, seldom more difficult than in the analysis of the formative or grammatical portions of a language, the suffixes and the prefixes, &c. It would, perhaps, hardly be necessary to lay any stress upon this evident rule, had it not been so frequently and flagrantly violated, particularly by advocates of the so-called Pronominal Theory. (*Vide* § 415, note.)

443. There can be little doubt that the original meaning of the prefixes has also been obscured by the custom of correspondence which established itself between prefixes of different numerical value, whereby the meaning of one prefix became affected by that of another, to which it corresponded, either as singular or plural. The prefixes of the plural number were naturally most affected in this way; and it may be on this account that their etymology is still less certain than that of those of the singular number. It is, indeed, possible that the derivative prefix *ba-* of the 2nd class (or gender), by which the plural of almost all nouns of the 1st (*mu-*) class (personal nouns) is formed, has something to do with the Setshuâna auxiliary verb *ba* "be again" (perfect *bile* or *be*, as *ki bile ki tsile* "I have come again") and also with the stem of the second numeral, of which the primitive form *-bali* (§ 361) is still used in the Benga language.

2. ETYMOLOGY OF THE HOTTENTOT DERIVATIVE SUFFIXES.

444. The number of the classes (or genders) of nouns in the Hottentot language, being, as we have seen, much smaller than in the Bâ-ntu languages, the cases in which (two or more) suffixes, originally distinct, and marking different classes, have coalesced, are probably more numerous. At the same time, the regularity in the numerical correspondence (as singular, plural, and dual) of

the different classes or genders to each other has been far more strictly carried through. These causes combine to render the etymology of the derivative suffixes which indicate the classes or genders in Hottentot, even more obscure than that of the prefixes in the Bâ-ntu languages. In fact, none of the derivations which suggest themselves with regard to these Hottentot terminations of nouns, is more than possible. Curiously enough, the terminations which can most easily be compared to other parts of speech, are those of the masculine plural and masculine dual classes. The form of the masculine plural **-gu** (Knudsen's and Tindall's **-ku**) is identical with the suffix, by which the reciprocal form of the verb is distinguished. Thus *mū-gu* is "see one another" (with reference to both plural and dual, and to all genders and persons), but *mū-gu* is "see them," or "they seeing," and *mū-gu* "eyes" (§ 424),—the termination *-gu* in the two latter cases belonging to the masculine plural class (or gender), in the one case as pronoun either objective or subjective, in the other as derivative suffix. It is quite possible that the plural and reciprocal meaning sprung from the same original idea; but it may be, also, that the identity is only apparent, just as in German the same form of pronoun (*sie*) does service now in the feminine singular (English "she") and common plural (English "they"), and the syllable *ihr* may either indicate the possessive adjectives of the feminine singular (English "her") and common plural (English "their"), or the dative case of the former (English "to her," &c.), or even be the so-called pronoun of the second person plural (English "you"). But such cases of homophony of forms which were originally distinct, are so numerous, that it ought to be superfluous to warn grammarians of the snares which they contain. With the same reservation, we may also compare the termination of the masculine dual **-kha** with the stem *kha-* in *khā-p* m. s. "war" (also "a bow"), *kha-koi-p* "an enemy." The Latin *bellum* (i.e.

duellum), German words like "Zwietracht, entzweien," and the English phrase "it takes two to make a quarrel," come forward as advocates for such a suggestion, but it cannot be considered as anything more. With regard to the other terminations of the classes or genders, we are even destitute of such hypothetical etymologies, excepting as far as the present general meaning of the suffix may be considered a safe guide. Thus the termination of the feminine singular, of which the original form appears to have been *-si* (§ 423), may have a causal meaning similar to that of the 7th prefix, of which the Kafir form is also *si-* (§ 447). In the Nama verb *dai-si* "to suckle," (compare *dai* "to suck,") the same suffix appears to have such a causal meaning; but, as yet, the above instance is the only one known in which this suffix is used for the formation of causative verbs. (*Si* by itself, used as a verb, means "to go to, arrive at.") The identity of these terminations (the noun suffix *-s* and the verbal suffix *-si*) with that of the !Kora causative, or rather permissive, verbs in *-kosi*,* (which seem to be unknown in the Nama dialect,) is still less clear. That the termination of nouns in the masculine singular *-bi* (§ 423) had originally a local signification, is rendered probable by the meaning of many nouns formed with it, and by those adverbial forms which were originally demonstrative and interrogative pronouns of this gender, as *ne-b-a* "here," *na-b-a* "there," *ma-b-a* "where;" whilst *ne-s-a* means "thus," *ma-s-a* "what, why," &c. These Hottentot adverbs are similar in their use and etymology to the Kafir adverbial expressions *a-pa* "here," *a-p-o* "there," and *pi-na* "where," which evidently were originally demonstrative and interrogative pronouns of the now obsolete 16th (*pa-*) class. (*Vide* § 435). But if it were allowable to identify derivative suffixes of the Hottentot nouns with the prefixes of the nouns in the Bântu languages,—then the suffix *-b* or *-bi*, in its junction of masculine and local meaning, would almost

* Appleyard, p. 25, XVIII.

suggest the hypothesis that the homophonous prefixes of the 1st and 3rd classes (*mu-*) had here been combined, so that the local meaning of the 3rd class had joined the personal one of the 1st, and that by an accidental exclusion of the feminine nouns (*vide* § 424), the latter class had been restricted to nouns indicating male beings. But we need not say that we do not ascribe the least weight to these comparisons, nor do we believe that we have proved even the probability of the identity of certain derivative suffixes of nouns in Hottentot, and similar prefixes in the Bâ-ntu languages. It is enough for us, here, to have ascertained that the principle, upon which the Concord in both these families of languages is based, is primarily the same. I do not, however, maintain that, before the question of any special identity of the suffixes of the one and the prefixes of the other family of languages can be mooted, it must first have become clear that one of these families of languages (either the Prefix-Pronominal or the Suffix-Pronominal) has inverted the original position of the derivative particles, and that thus, either the prefixes of the Bâ-ntu nouns, or the suffixes of the Hottentot, have to be regarded as articles originally descended from the derivative particles (which must now have wholly disappeared) rather than as derivative prefixes.* On the

* To make our meaning clearer, we may refer to the circumstance that nouns in the Bâ-ntu languages frequently lose their derivative prefixes, and merely indicate the concord by the pronominal elements referring to each noun. Let this practice be accompanied by the habit of placing demonstrative pronouns only at the end of the noun (as in *Setshuâna*), and not prefixing them (as in *Kafir*),—then a simple pronominal element used as an article, at the end of the noun, may frequently become the chief mark, by which the class of each noun is distinguished. It must, of course, be supposed that the use of such a suffixed article had become so prevalent as to cause the original derivative prefix (no longer necessary as a mark of the concord) to disappear entirely,—before we can assume this to have been the origin of the concord-indicating suffixes of the nouns in Hottentot. Such a process is not impossible, but in the present state of our knowledge it would be wrong to look upon it as probable. If, however, it were to have taken place, then what we now call derivative

contrary, it is quite possible that in the primary stages of the Pronominal languages, the position of these derivative particles of the nouns was not fixed, and that they could either precede or follow the other parts of the noun. Their position, as prefixes or suffixes, may have afterwards fixed itself, and thus an original identity of some among such prefixes and suffixes is not impossible. But, of course, a few casual coincidences can by no means establish an actual identity.

445. Upon the whole, the etymology of almost all the derivative suffixes of the nouns in Hottentot, and of most of the derivative prefixes in the Bâ-ntu languages, may be said to be as uncertain as that of the most ancient derivative suffixes in our own languages. We do not doubt that these had originally an independent meaning, just as much as the more modern suffixes, of which we can still trace the derivation.

3. ANALOGIES.

446. Between some of the derivative prefixes of the Bâ-ntu languages, and certain derivative suffixes in our own, we notice a sort of correspondence. For example, in the formation of verbal nouns, the derivative prefix **mu-** of the 1st class or gender almost corresponds with the suffix **-er** in English and German. Thus, from Kafir **u-ku-fundisa** 15. "to teach" is derived **u-m-fundisi** 1. "teacher," from **u-ku-zinga** 15. "to tempt" **u-m-zingi**

suffixes of nouns in the Hottentot language, would have to be considered as pronouns, originally identical in form with derivative prefixes which have now disappeared. If this were the case, although it would alter our opinion regarding the status of the terminations indicating the gender of nouns in Hottentot, yet our explanation of the origin of the concord in that language would not be affected by it; for, if the present terminations are merely pronominal elements and not derivative particles, they must at all events be referred to derivative particles (either prefixed or suffixed), which were originally determinative of the class or gender, although they may now have disappeared.

"tempter," &c. A still more decided correspondence of meaning is found between the power of the prefix of the 14th class (*bu-* in Kafir, *bo-* in Setshuana, *u-* in Otyihereró)* and our derivative suffixes *-ness*, *-ship*, *-hood*, *-dom*, and *-ing*, as *u-bu-nyakama* 14. "dampness" from *u-ku-nyakama* "to become damp," *u-bu-soka* 14. "bachelorship" from *i-soka* 5. "bachelor," *u-bu-ntwana* 14. "childhood" from *u-m-twana* 1. (Zulu *u-mu-ntwana* 1. pl. *a-ba-ntwana* 2.) "child," *u-bu-doda* 14. "manhood" from *i-n-doda* 9. "man" (pl. *a-ma-doda* 6. "men"), *u-bu-lumko* 14. "wisdom" from *u-ku-lumka* 15. "to heed, to care, to be wise," &c. Points of analogy may also be observed between other derivative prefixes in the Bâ-ntu languages, and the derivative suffixes of the nouns in ours; although none of these analogies are so extensive as to allow us to identify the meaning of any Bâ-ntu derivative particle, with that of one of our own.†

447. Correspondence does not exist to this extent between any of the sex-denoting suffixes in Hottentot, and the so-called derivative suffixes of nouns in our own languages. Evidently, the original power of those Hottentot derivative suffixes, (which indicate the concord,) has been

* In the Dakota Language, spoken by the Sioux in North America, the derivative prefix *wo-* is used for the purpose of forming abstract nouns from verbs and adjectives. (Dakota Grammar 4to, 1852, § 5, 5; § 62, 3.)

† The vowel terminating the nouns, in the Bâ-ntu languages, is in no way derived from, or connected with the derivative prefixes, and has no reference whatever to the concord. The nature of this vowel is, however, of importance to the meaning of the noun, particularly if derived from a verb. In this case the noun generally ends in one of the following vowels, *-a*, *-i* (or *-e*), and *-o*. The termination *-o* here clearly implies a passive meaning, the *-i* an active or causative, whilst the *-a* has a neutral force. It follows from the meaning which each of these vowels conveys, that certain prefixes are either constantly or generally accompanied by one of these terminations. For instance,—all, or almost all, the infinitives of verbs end in *-a*, and thus the great mass of the nouns of the 15th (*ku-uu-*) class end also in *-a*. Similarly, most of the verbal nouns of the 1st (*ma-uu-*) class (of personal beings) end in *-i*, and most of those of the 3rd (*ma-uu-*) class have *-o* as their terminating vowel.

weakened, and their meaning obscured. They have, therefore, no longer that derivative force which they must have possessed formerly, and have become chiefly signs of gender (or class) and number. In fact, to some extent, the local and causal meanings which the two most important of these suffixes (those of the masculine and feminine singular) impart to many of the nouns formed with them, seem to place them almost in analogy with some case terminations in the Aryan languages. Yet these concord-indicating suffixes in Hottentot are sufficiently used for the purposes of derivation, and of delineating various shades of meaning, to render it evident that they (like the Bâ-ntu prefixes of nouns) were formerly employed as derivative particles, descended from words once independent.

III. THE GENDERS (OR CLASSES) AND NUMBERS OF NOUNS.

1. THE CLASSES AND NUMBERS OF NOUNS IN THE BÂ-NTU LANGUAGES.

a. NUMERICAL VALUE AND CORRESPONDENCE OF THE DERIVATIVE PREFIXES OF THE NOUNS.

448. With regard to the analogy, which we observed between the concord-indicating derivative prefixes in the Bâ-ntu languages, and the derivative suffixes of nouns in our own, this difference is, however, to be noted, that whilst our derivative suffixes do not by themselves indicate either the singular or plural (the number being marked by the declension of the noun), most of the Bâ-ntu derivative prefixes of nouns (like the terminations indicating the gender in the Hottentot and Semitic languages) imply a certain numerical value; and, as a general rule, one derivative prefix corresponds to another, either as singular or plural. Thus Zulu *u-m-fundisi* 1. (Nama

||*khā*-||*khā*-*au*-*p* m. s.) is "a teacher," and *a-bā-fundisi* 2. (Nama ||*khā*-||*khā*-*au*-*ku* m. pl.) "teachers," *i-si-fundiso* 7. (Nama ||*khā*-||*khā*-*p* m. s. or ||*khā*-||*khā*-*s* f. s.) "doctrine," and *i-zi-fundiso* 8. (Nama ||*khā*-||*khā*-*ei*-*ti* f. pl.) "doctrines," *u-mu-ti* 3. (Nama *hei*-*s* f. s.) "a tree," and *i-mi-ti* 4. (Nama *hei*-*ti* f. pl.) "trees," *u-lu-ti* 11. (Nama *hei*-*i* common s.) "a stick," and *i-zin-ti* 10. "sticks," *i-li-zwe* 5. "country," and *a-ma-zwe* 6. "countries," *i-si-zwe* 7. "nation," and *i-zi-zwe* 8. "nations," &c.

449. Although this is the general rule, it is by no means necessary that each prefix should convey a certain numerical value, or that a prefix indicating the plural number should only correspond to one of the singular. On the contrary, though the power of analogy, (particularly in the more advanced languages of the Bâ-ntu family,) has produced great regularity with regard to such correspondence, it still frequently occurs that one prefix of the plural number corresponds to two or more different prefixes of the singular number, and that two or three different plural prefixes are found in correspondence with one of the singular number.

450. Thus the (singular) prefix *n-* of the 9th class or gender is usually exchanged in the plural for *zin-* of the 10th class. Yet there are some nouns of the 9th class (as *i-n-doda* "man," *i-n-simu* "garden," *i-n-kosi* "chief,") the plurals of which are formed with the derivative prefix *ma-* of the 6th class, as *a-ma-doda* "men," *a-ma-simu* "gardens," *a-ma-kosi* "chiefs." (Colenso §§ 58—60.) Similarly, the prefix *zin-* of the 10th class generally corresponds as plural to *lu-* of the 11th class; but a few nouns in *lu-* have also their plurals formed with the prefix *ma-*, as *u-suku* (vocative *lu-suku*) 11. "day," pl. *a-ma-suku* 6,* and in Kafir *u-bala* 11. "desert," pl. *a-ma-bala* 6.,

* In Zulu we find besides the form *a-ma-suku* 6. two other plurals corresponding to *u-suku* 11., viz, *i-zim-suku* or *i-m-suku* 10. and *i-mi-suku* 4. The latter is only used in the locative case, *e-mi-sukw-eni* or *e-m-sukw-eni* "every day." (Colenso's Dictionary p. 458.)

u-lwahwa 11. "rock," pl. *a-ma-lwahwa* 6. Examples of the latter kind of correspondence appear to be more frequent in Setshuâna than in the Kafir species, as *lo-uñuo* 11. "fruit," pl. *ma-uñuo* 6., *lo-loapa* 11. "court," pl. *ma-loapa* 6., *lo-humo* 11. "wealth," pl. *ma-humo* 6., *lo-rato* 11. "love," pl. *ma-rato* 6., &c.

451. The prefix *ma-* of the 6th class or gender corresponds most regularly as plural to the prefix of the singular number *li-* (of the 5th class), which *li-* is not exchanged for any other plural prefix. Besides this, the prefix *ma-* (as has just been stated § 450,) is used for forming plurals to certain nouns of the singular number with the prefixes *n-* of the 9th and *lu-* of the 11th classes (or genders). In Kafir, also, a few of the nouns formed with *ma-* (as *a-ma-pakati* 6. "councillors," *A-ma-losa* "Frontier Kafir," &c.) are plurals to nouns of the 1st (*mu-*) class of personal beings, (*u-m-pakati* 1. "councillor," *U-m-losa* 1. "a Frontier Kafir,") which generally has the 2nd (*ba-*) class as its corresponding plural. In Setshuâna, and in many of the more northern languages, this prefix *ma-* is also used for the formation of plurals to nouns having in the singular number the prefixes of the 14th (Setshuâna *bo-*, Otyihereró *u-*) and 15th (Setshuâna *xo-*, Otyihereró *ku-*) classes,—as Setshuâna *bo-sixo* 14. "night," pl. *ma-sixo* 6. (§ 453), Otyihereró *o-ku-tui* 15. "ear," pl. *o-ma-tui* 6.* (§ 454, note.)

452. We find also a number of nouns formed with the prefix *ma-* which do not correspond as plural to any singular nouns, but have a collective meaning. The nouns of this kind which are the most numerous and which are common to all languages of this family, are those

* With reference to the apparent probability that the *ma-* in these cases was originally prefixed to the prefixes of the 11th (*lu-*), 14th (*bo-*), and 15th (*ku-*) classes, rather than substituted for them, see below, § 454.

signifying liquids, as Kafir *a-ma-nzi** “water,” *a-ma-si*† “milk,” *a-ma-futa* “oil, fat, butter”†, *a-ma-te* “spittle,” Setshuâna *ma-ri* “blood,” &c.§ We also meet with a

* Sesuto *metse*, Seɽlapi *metse*, Tekeza and Inhambane *ma-ti*, Sofala and Kisuahéli *ma-dshi*, Tette, Sena, and Maravi *ma-dze* and *ma-dzi*, Quellimane *ma-ndshe* or *ma-inshe*, Makua *ma-zi*, Kihiau (Mudshau, Ajoua) *meze* (Peters) or *messi* (Koelle), Kikamba *ma-nzi*, Kinika and Kipokomo *ma-zi*, Bashubea *menze*, Batonga *ma-nzi* (Chapman), Batoka *meze* (Livingstone), Borotse *mei*, Banyen̄ko *mezo*, Bakhoba (Bayeiye) *ami*, Balojazi and Maponda *mema*, Otyiherero *omeva*, Ovambo *omea*, Nano (Benguela) *ovova*, Bunda (Angola) *menya*, Kongo *mâsa*, Dikele, Dualla, and Isubu *ma-diba*, Benga *miba*, Timneh, m'antr, Bullom *men*. The original form of this noun was probably similar to that still preserved in the North-western Branch (Dikele &c.), perhaps MA-NDIBA.

† Sesuto *ma-fi*, Seɽlapi and Balojazi *ma-shi*, (Inhambane *ma-pisa*), Suaheli and Kipokomo *ma-siwa*, Kinika *messia*, Ba-nyen̄ko *ma-we*, Bashubea *ma-shue*, (Bayeiye *ma-shota*), Otyihereró *o-ma-ih*, Sindonga (Ovambo) *o-ma-ĩni*, (Batoka *ma-lile*, Nano or Benguela *o-va-vele*, Benga *ma-nyangã*, Dikele *ma-nyandiba*, Dualla *ma-nyongo-diba*), &c.

‡ Sena, Tette, Cape Delgado, Batoka, and Bashubea *ma-fûta*, Inhambane, Tekeza and Sesuto *ma-fura*, Seɽlapi *ma-hura*, Makua *ma-kûra*, Suahéli *ma-fûda*, Kihiau *ma-fûda* or *ma-bûda*, Kinika and Kipokomo *ma-fûha*, Kikamba *ma-uda*; Banyen̄ko, Barotse and Balojazi *ma-šé*, Bayeiye *a-ma-ze*, Baponda *ma-ze*, Otyihereró *o-ma-š'e*, Bunda *ma-shi* (*magi*), &c.

§ This structural peculiarity, (viz. that a good number of nouns indicating liquids are formed with the derivative prefix *ma-*, and are, in consequence, represented by pronouns of which the original form was also *ma-*), is so characteristic that it would be a most curious coincidence, if it originated in different languages independently of each other. It was on this account, that when nothing more was known to me of the BULLOM language than the short notice in Vater's "Mithridates" (Vol. IV. p. 438), the fact there mentioned of this language possessing a peculiar relative pronoun *ma* referring to liquids, seemed at once to suggest a relationship with the Bâ-ntu languages. (De Nominum Generibus 1851, p. 39.) Soon afterwards, when Nylander's publications became accessible to me, this hypothesis was converted into certainty. Subsequently, I found that the first Bishop of Sierra Leone (O. E. Vidal) had, about the same time, "discovered the Temneh (with its two cognates, the Sherbro and the Bullom) to be a branch" of what he calls "the South African family" of languages. (Crowther's Yoruba Vocabulary, 1852, Introd. Remarks, p. 7.) Later, I learnt, in perusing Hazelwood's Grammar of the FIJI language, that the genitive particle *mei* was especially

number of abstract nouns of the 6th (**ma-**) class without any corresponding singular or plural, particularly in the more northern of the South African Bâ-ntu languages.

453. Further, a derivative prefix may in some nouns have a plural value, and thus correspond to a prefix of the singular number, while in other nouns the same prefix may indicate the singular number, and have a plural prefix corresponding to it. Such is the case with the 14th prefix. This prefix (**bu-**) in Kafir and Zulu is of no definite number, and has no other prefix corresponding to it, either as singular or plural. Most of the nouns formed with it are abstract nouns. (§ 446.) In the kindred Setshuâna, however, the same prefix **bo-** is of the singular number, and the nouns formed with it exchange it in their plural for **ma-**, the derivative prefix of the 6th class. Similarly, many Middle Branch languages either displace the 14th prefix (in these languages generally abbreviated to **u-**) for the 6th prefix (**ma-**) in order to form the plural; or, for the same purpose, they prefix **ma-** to the form beginning with **u-**. Thus Otyihereró *o-u-tuku** 14. (night) has as corresponding plural the

used in this language to indicate "the possession of a thing to be drunk," as "*a me* (the drink) *i* (of) *Varani*." ("Grammar" p. 19.) The natural inference suggested itself that this feature of the language was again to be considered as a trace of the common origin of the Fiji and the Bâ-ntu languages. This probability was then further confirmed by so many other evidences, particularly those met with in the Papuan languages, that no doubt could any longer remain as to the fact that the Papuan, Polynesian, and Malay languages are related to the Bâ-ntu languages, and that thus the Prefix-Pronominal Class forms almost one continuous belt of languages on both sides of the equator, from the mouth of the Senegal to the Sandwich Islands. The observations on the position of the Oceanic section of these languages were embodied in a treatise, which is in the possession of Sir George Grey.

* Kafir **u-bu-suku**, Sesuto **bo-sio**, Setshuâna **bo-siço**, Tekeza (Lourenzo Marques) *besiho*, Inhambane **u-shiku** or **u-shigu**, Sofala **bu-shiku**, Tette **u-siku**, Maravi **u-siko**, Mosambique **u-hiyu**, Kisuaheli, Kinika, and Kipokomo **u-siku**, Kikamba **u-tũku**, Banyenke **o-thiko**, Batoka and Borotse **bo-siko**, Bamponda **bo-tike**, Nano (Benguela) **u-tike**, Bunda (Angola) **u-sũku**, Dualla and Isubu *bulu*.

form *o-ma-u-tuku** 6. (nights). But in Otyihereró (and also in several other Middle Branch languages,) the same prefix *u-* of the 14th class is not of the singular number only. It is also used for the purpose of forming nouns of the plural number, which correspond to singular nouns with the prefix *ka-* of the 13th class, as *o-ka-ti* 13. "stick," pl. *o-u-ti* 14. "sticks"; whilst the nouns of the 13th (*ka-*) class, in some of the Middle Branch languages, again have as corresponding plurals, nouns formed with the prefix of the 12th class *tu-*, which is used in Otyihereró and other languages as plural of the 11th (*ru-* or *lu-*) class. (§ 405.)

454. At an early period of the language, when the present derivative prefixes (or suffixes) were still used by themselves with an independent meaning, and when the nouns of which they formed part, were, therefore, not derivatives, but composites,—it seems that there was no general distinction of the number of nouns. The grammatical number of nouns is only a consequence of their distribution into classes; for, a regular indication of the number can only in this way have been effected. Few nouns in themselves necessarily implied either the singular or plural number, excepting those which stood in such relation to each other as some of our collectives stand to the single nouns corresponding to them,—“people” to “person,” “army” to “soldier,” “forest” to “tree,” “fleet” to “ship,” &c. In this way, when some of the present derivative prefixes (or suffixes) of nouns occupied this relative position, the habit may have gradually arisen of indicating that difference in the number of the nouns which was not yet a ruling principle in the structure of the language, by the contrast of these parts of the nouns which we may call their determinatives. But it does not, of course, follow that all those parts of the nouns which were

* Setshuāna *ma-siyo*, Sena *ma-siko* or *ma-siku*, Bashubea (Livingstone) and Batonga (Chapman) *ma-siko*, Bakxoba (Bayeiye) *ma-suko*.

converted into derivative prefixes (or suffixes) indicating the concord, once stood in this relation to each other; though the progressive development of the language must have had the tendency to identify this grammatical classification of the nouns with general distinctions observed in nature. (§ 398—402.) But, to the regularity in the correspondence of the singular and plural prefixes, another exception is found in the numerous cases in which derivative prefixes of the plural number are prefixed to the corresponding singular prefixes, instead of replacing the latter. In such cases, the form with the prefix of the singular has to be considered as the stem from which (by the addition of its own prefix) the plural is formed. In the South-eastern genus of the Middle Branch languages, the prefix of the 6th class (**ma-**) is found prefixed in this manner to nouns formed with the prefixes of the 11th (**lu-**), 14th (**(b)u-**), and 15th (**ku-**) classes, as Bunda **lu-to** (Otyihereró *o-ru-tuo*) 11. "spoon" pl. **ma-lu-to** 6., **u-ta** (Otyihereró *o-u-ta*) 14. "bow" pl. **ma-u-ta** (Otyihereró *o-ma-u-ta*) 6., Sindonga (Ovambo) *o-kó-tshui*, 15. "ear" pl. *o-ma-kó-tshui* 6. (§ 434, note); &c. In the South-eastern Branch a similar case is only met with in Setshuâna, where the prefix **bo-** of the second class sometimes stands before forms of the 1st class with the prefix **mo-**, as **bo-mo-nnaue** 2. "younger brothers," sing. **mo-nnaue** (Kafir *u-m-nina-we*) "younger brother." It is not improbable that in these cases the forms with double prefixes are the originals, from which the forms with single plural prefixes, found in other dialects, are contracted. Yet the whole system of substituting a plural prefix for a singular one is certainly older than that of adding a particle indicating the plural to the form with a singular prefix. There are similar cases in some Middle Branch languages, where other concord-indicating prefixes precede the forms of full nouns, as in Kikamba **ka-mu-di** 13. "little tree," pl. **tu-mi-di** 12., Sena **shi-mu-ti** 7. "large

tree," pl. **pi-mi-ti** 8. (§ 428), &c. In all these instances, however, it must be remarked that the first prefix only is to be taken into consideration as regards the concord. In this respect, these cases differ entirely from that of the 10th (**TIN-**) class, if the latter was formed from the prefix of the 9th (**N-**) class, by an old plural prefix (**TI-**); for, the concord here takes account of the full form **TIN-**. But the correspondence of this 10th prefix as plural to the prefix of the 11th (**lu-**) class, of which examples are met with in many Bâ-ntu languages, is rather against the supposition that the tenth prefix (**TIN-**) is composed of an old plural prefix (**TI-**) and the singular prefix **N-** of the 9th class.

5. DISAPPEARANCE OF CLASSES OR GENDERS.

455. When the concord-indicating derivative prefixes first came into existence as such, (by ceasing to be used as independent words,) they were probably far more numerous than we now find them in those Bâ-ntu languages which have as yet come under our observation. Traces of some such extinct prefixes might possibly still be detected by careful analysis,—just as in Kafir we clearly find remains of demonstrative pronouns of the extinct 16th (**PA-**) class, which lie imbedded like petrefactions among the adverbs and conjunctions (§ 435 and 444), and as the remains of an obsolete noun, of the also extinct 13th (**KA-**) class, are met with among the prepositions. (§ 436.)

456. The disappearance of whole classes of nouns may have been produced in two ways,—either by the nouns belonging to them becoming obsolete, or by their derivative prefixes, and the pronouns referring to them, becoming assimilated to those of another class. For example, the latter is the case in Sesuto with the 11th class. This class is still perfectly distinct in Western Setshuâna, where its prefix is **lo-**; but by a phonetic

change of the *o* into *e* in Sesuto, (of which change other instances also occur,) this prefix has here become identical with that of the 5th (1e-) class, and these two classes have thus coalesced. Of course, the mere homophony of the derivative prefixes does not in itself constitute the identity of two classes of nouns. Such a thorough amalgamation can only be said to exist, where all the different pronominal elements (or all the forms of concord referring respectively to nouns of the two originally different classes) have also assumed identical forms. Such appears to be the case with the 11th and 5th classes of nouns in Sesuto; it is, however, not so with regard to the 10th (zin-) and 8th (zi-) classes in Kafir (and Setshuâna), though the prefixes and the pronominal elements have in most instances assumed the same forms; but as this is not universal, the two classes are still to be viewed as distinct from each other.

457. Processes similar to these, which in comparatively recent times have reduced the number of classes (or genders) in many Bâ-ntu languages, may also safely be assumed to have been at work during the previous periods through which these languages passed. Thus the number of classes (or genders) of nouns, which was in all probability originally very large, has been reduced to less than a score; and these have assumed such relations to each other, that one class implying the singular number generally corresponds to another of the plural. This cannot have been the case at the beginning, nor is this rule, even now, strictly carried out in any Bâ-ntu language; but it indicates the direction in which the progress of the language tends. How this principle has been at work in the different Bâ-ntu languages which we are able to compare, will be seen from the tables, in which the different forms of the derivative prefixes of each language are so exhibited that the correspondence of the classes (or genders) of the singular and plural numbers can be perceived at once.

C. NOMENCLATURE.

458. For the purpose of identifying the several forms of the same class (or gender) in the different Bâ-ntu languages, it is necessary to indicate each class by a number. No other way of distinguishing the classes is equally capable of general application. Since they have *not* been connected with natural distinctions, as in the Sex-denoting languages, the only ways of clearly indicating them are either by numerals, or by employing for this purpose the most usual form of each derivative prefix. The latter nomenclature, however, would be useless for the purposes of comparison, or to say the least, very confusing; for, as the prefixes have different forms in the different languages, the same syllable is not infrequently used in one language as the prefix of one class, and in another as that of one wholly different. Thus *li-* in Kafir is the prefix of the 5th class (= Setshuâna *le-*), whilst *li-* in Setshuâna is the prefix of the 8th class of nouns,* of which the Kafir form is *zi-*. Such cases of apparent phonetic identity of different prefixes in different languages, as well as instances of different forms for the same prefix, are often met with in comparing these languages with one another. For example, whilst in the above instance the consonant *z* belongs in Kafir to the 8th (*zi-*) and 10th (*zin-*) classes,—in Mpongwe the same letter is characteristic of the 7th prefix (Kafir *si-*); and the 8th class in Mpongwe has *y*, and the 10th *s*, instead of this *z*.

459. Most Grammarians who describe these languages, have also distinguished by numbers what they call “*principiations*” (Brusciotto à Vetralla), “*classes*,” “*species*,” or “*declensions*” of the nouns; but they have generally combined the singular and plural forms corresponding to each other into one class, thereby greatly complicating their grammatical labours. For, as one (and the same)

* In his latest edition of the New Testament Mr. Moffat gives *fi-* as the form of this prefix, and also of the 10th; but in all former Setshuâna publications, and also in Mr. Frédox’s “Grammar,” we find *li-*.

derivative prefix of the plural frequently corresponds to more than one prefix of the singular number, in such cases the grammatical forms referring to each plural prefix (as pronouns, adjectives, &c.,) must be twice or thrice repeated.

460. The order in which the classes (or genders) of nouns in the Bâ-ntu languages are placed here, is almost the same as that which is followed in my dissertation "*De Nominum Generibus*" &c. (Bonn, 1851); excepting that the 13th and 14th classes have changed their numbers. The present arrangement has been completely adhered to in my edition of Dr. Peters' *Mosambique Vocabularies* (London, 1856), in Hahn's *Otyihereró Grammar and Dictionary* (Berlin, 1857), and in Frédoux's "*Sketch of the Sechuana Grammar*" (Cape Town, 1864). It is, however, right to state that the Rev. C. H. Hahn objects to this order of the prefixes, and considers it arbitrary. ("*Grammatik*" p. 7, note.) It does not, however, appear to me that any better arrangement has been proposed; and ours has, at all events, the advantage that in Otyihereró (which language, as possessing the greatest number of classes of any known Bâ-ntu dialect, has been mostly considered in making this arrangement,) all the odd numbers from 1 to 13 indicate classes of the singular number, whilst the most usual plural class corresponding to each of these singular classes, is named by the even number following. The *mu-* class of personal nouns, with the corresponding *ba-* class, naturally head the series. Then follows, as third, the other *mu-* class with its corresponding plural as fourth; and with regard to the order in which the remaining classes have been arranged, certain reasons, either founded upon the present use of the prefixes, or upon their probable origin, have prevailed; but as they are chiefly of a practical nature, it is unnecessary to explain them here.

d. THE PREFIXES OF THE NOUNS IN THEIR DIFFERENT FORMS AND IN THEIR NUMERICAL CORRESPONDENCE.

A. IN THE SOUTH-EASTERN BRANCH.

THE KAFIR SPECIES.

461. The most usual forms in which the derivative prefixes of the nouns in the Kafir species occur, are those preceded by a vowel, which is always identical with the vowel ending the prefix itself, provided, of course, that this ends with a vowel. Such is everywhere the case in the Kafir language, excepting the prefixes of the 9th (n-) class, and those of the 1st and 3rd (m-) classes. In both the latter instances, however, the Zulu yet shews with monosyllabic stems the fuller and older form *mu-*. The initial vowel is chiefly absent in cases where the employment of an article would be inadmissible,—always in the vocative,* and in certain negative sentences.† We thus recognise in this vowel an article, which, according to its origin, is a pronoun that was in the first instance identical with the derivative prefix which it precedes.

462. That the article had originally the full form of the prefix is clear from an analysis of the so-called causal form (or case) of nouns in Kafir. (Appleyard § 114.) This case was originally formed by prefixing the preposition of identity and causality *ngi-* “it is, by” (Setshuâna *ki-*, Makua, Kihiau, Kinika, and Kisuahéli *ni-*, Otyihereró *i-†*) to the form of the noun with the article. Thus with nouns of the 1st (m-), 2nd (ba-), 3rd (m-), and 6th (ma-) classes the vowel only of this *ngi-* has been suppressed, and, of the article, the vowel alone retained. We have thus *ng-u-m-fazi* 1. “it is a woman” (= Setshuâna

* Appleyard § 113, Colenso § 92, Grout § 123.

† Appleyard § 315 and 364, Colenso § 126.

‡ In the dialect of Sena, in Bunda, Kongo, Mpongwe, and Isubu this preposition appears to have merged into another preposition, common to most, if not all, Bâ-ntu languages, viz. *na-* “with, and.”

ki mo-safi), *ng-a-ba-fazi* 2. "they are women" (= Setshuâna *ki ba-safi*), *ng-u-m-lo-mo* 3. "it is a mouth" (= Setshuâna *ki mo-lo-mo*), *ng-a-ma-fu* 6. "they are clouds" (= Setshuanâ *ki ma-ru*). But before nouns of the 5th (*li-*), 7th (*si-*), 8th (*zi-*), 10th (*zin-*), 11th (*lu-*), 14th (*bu-*), and 15th (*ku-*) classes, the preposition *ngi-* is now wholly elided, though its influence is felt in the retention of a fuller form of the article. This fuller form consists of the first two letters of that derivative prefix, from which each article has descended. Thus we find *li-li-fu* 5. "it is a cloud" (= Western Setshuâna *ki le-ru*), *si-si-fuba* 7. "it is the chest, breast" (= Setshuâna *ki se-huba*), *zi-zi-fuba* 8. "they are chests" (= Setshuâna *ki li-huba*), *zi-zim-vu* 10. "they are sheep" (= Setshuâna *ki lin-ku*), *lu-lu-ti* 11. "it is a stick," *lu-nyawo** 11. "it is a foot" (= Setshuâna *ki lo-nao*), *bu-bu-suku* 14. "it is night" (= Setshuâna *ki bo-siχo*), *ku-ku-tanda* 15. "it is to love" (= Setshuâna *ki χo-rata*).† We thus clearly see, that whilst in the former examples the preposition *ngi-* has amalgamated with the article (which, in this case, usually preserves only its vowel),—in the latter instances the preposition has disappeared before the consonant of the article, which consonant, by the influence of the preposition, has been retained. In the case of the 2nd (*ba-*) class both changes of form (dropping the preposition, and its amalgamation with the vowel of the article) are met with in different dialects of the Kafir language; the Amampondo dialect having the causal form *ba-ba-*, as in *ba-ba-ntu* (Boyce-Davis, § 25) = *ng-a-ba-ntu* of the Ama/osa (Frontier Kafirs). These two forms are equally derived from an ancient form *NGI-BA-BA-NTU* (Setshuâna *ki ba-thu*).

* Contracted from *NGI-LU-LU-NYAWO*. Vide § 465.

† In *y-i-mi-lambo* 4. "they are rivers" (= Setshuâna *ki me-lapo*), and *y-i-m-vu* 9. "it is a sheep" (= Setshuâna *ki m-ku*) the *y* is probably a weakened form of the *ng*. In Zulu we also find this *yi-* (= *ngi-*) used in several other classes. (Colenso § 138–140.)

463. Whilst the article is thus constantly retained in the causal case in Kafir, and appears either fully, or as a mere vowel,—it is as regularly omitted after some other prepositions (which form, as it were, cases of the nouns), particularly after *ka-* of the genitive, and *kwa-* of the locative, both of which prepositions are only used with personal nouns (Appleyard § 102, 104, and 112), being principally restricted to proper names*. If the article were employed in the examples given below, the vowel (*a*) of the preposition would have coalesced with the vowel *u* of the article of the 1st (*m-*) class, forming *o*, and with the *i* of the 9th (*n-*) class, forming *e*. (§ 328.) Such a contraction of the end *a* of the preposition with the vowel *i* of the article in the 4th (*mi-*), 5th (*li-*), 7th (*si-*), 8th (*zi-*), 9th (*n-*), and 10th (*zin-*) classes to *e*, and with the *u* of the 1st (*m-*), 3rd (*m-*), 11th (*lu-*), 14th (*bu-*), and 15th (*ku-*) classes to *o*, regularly occurs in the case of the usual genitive particle *-a-* “of,” and in those of the prepositions *na-* “with, and,” and *nga-* “by, through, with.”† Again the omission of the article is sufficiently clear in the case of the local preposition (*s*)*e-*, the present use of which, as far as we know, is restricted to the Kafir species. (§ 438, Appleyard § 107.)

* For example, in the following instances taken from Appleyard (§ 104), *u-m-fazi ka-Pato* “the wife of Pato,” *a-ba-fazi ba-ka-Pato* “the women of Pato,” *u-m-ti ka-Kobi* “the tree of Kobi,” *i-mi-ti ka-Kobi* “the trees of Kobi,” *i-hashe li-ka-bawo* “the horse of my father,” *a-ma-hashe ka-bawo* “the horses of my father,” the article *u* of the 1st (*m-*) class does not precede the nouns *u-Pato*, *u-Kobi*, *u-bawo*, (my, or our father); and in *i-m-Űlu ka-m-kosi* “the house of the chief” and *i-zin-Űlu zi-ka-m-kosi* “the houses of the chief,” the article *i* of *i-m-kosi* 9. “chief” is omitted. Similarly in *kwa-Pato* “at (to or from) Pato’s place,” *kwa-Mhala* “at (to or from) Umhala’s place,” the article *u* is again omitted.

† *U-m-fazi w-e-m-kosi* “the wife of the king,” *i-si-tya s-o-m-fazi* “the dish of the woman,” *u-bu-de b-e-li-zwe* “the length of the country,” *n-o-m-fazi* “with the wife,” *n-e-li-zwi* “and the word,” *ng-o-m-ti* “through the tree,” *ng-e-li-zwi* “by the word,” &c.

464. Although it is clear that the initial vowel was originally a pronoun, (derived from and, at first, identical with the derivative prefix which it precedes, and) used with the force of an article, it can hardly be said now to have this power. Its employment appears mainly to depend upon usage, and scarcely upon any intention of thereby defining the noun. The position of this ancient article at the beginning of the noun accords with the general position of the demonstrative pronouns in Kafir, which in this language, as well as in Isubu, precede the noun, instead of being placed after it, as in Setshuâna and most of the other Bâ-ntu languages. Vestiges of this old article are also found in some other Bâ-ntu languages (as in Mpongwe); and this renders it probable that this form of article (originally identical with the prefix) was used at the period preceding the dispersion of the South African Bâ-ntu languages. We generally find, however, that, in these languages, either forms without an article are used, or that the demonstrative particle *o-* (which is *not* a pronominal element originally identical with a concord-indicating derivative prefix) precedes the prefixes with the force of an article, as is the case in the languages of the South-western genus (Otyihereró, Bunda, &c.,).

465. A contraction of this ancient Kafir article with the derivative prefix which it precedes, (by which the latter appears to have been elided,) takes place frequently in those cases where the latter contains an *l*, viz. in the 5th (li-) and 11th (lu-) classes (or genders,) as

i-zwe 5. for i-li-zwe "land" (pl. a-ma-zwe 6.);	u-ntu for u-lu-ntu 11. "human race;"
i-gama 5. "name" (pl. a-ma-gama 6.);	u-nwele 11. "hair;"
i-soka 5. "bachelor" (pl. a-ma-soka 6.);	u-zwane 11. "toe" (pl. a-ma-zwane 6.);
i-siko 5. "custom, law" (pl. a-ma-siko 6.);	u-kuho 11. "mat;"
i-ziko (Tekeza tiko) 5. "fire-place" (pl. a-ma-ziko 6.);	u-bambo 11. "rib;"
	u-pondo 11. "horn;"
	u-sapo 11. "child;"
	u-lwimi 11. "tongue."

In the same manner the (bu-) of the 14th (bu-) and the zi- of the 10th (zin-) classes of nouns may disappear in combination with the article, and the forms of these prefixes with the article may thus be reduced to u- and i-n- (with its euphonic representatives according to § 214—216,)* as

u-tyalwa (Zulu u-bu-tywala, Se-	i-n-kuko 10. "mats;"
tshuâna bo-yaloa) 14. "Kafir	i-n-nwele 10. "hairs;"
beer;"	i-n-tsapo 10. "children;"
u-tyani (Setshuâna bo-yan 14.)	i-m-bambo 10. "ribs;"
"grass;"	i-m-pondo 10. "horns;"
i-n-komo 10. for i-zin-komo	i-lwimi 10. "tongues."
"cattle;"	

All these cases of contraction are more frequent with polysyllabic stems, and in some of the latter, such contractions are the rule, and the full form with the intermediate consonant the exception. But the form with the consonant reappears in nouns of the 10th (zin-) and 11th (lu-) classes, when they are used without the article (§ 461), as zin-komo 10. "cows!" zim-bambo 10. "ribs!" zi-lwimi 10. "tongues!" e-zi-lwimi-ni 10. "in the tongues," e-zin-tsatshe-ni 10. "among the children," lu-sapo 11. "child!" &c. Such a reappearance of the consonant does not, however, take place in nouns of the 5th (li-) class,† unless their stem is monosyllabic, as li-zwe 5. "land!" Nor does it occur when the consonant which has disappeared is the ending nasal of the prefix of the 9th (n-) or 10th (zin-) class; for, the nasal is suppressed before the initial consonant of the stem when incompatible

* The nasal in the prefixes **ni-** (9th) and **zini-** (10th class) is not changed into *n* in Kafir, as was erroneously stated in Part I. of this Grammar. For the correction of this mistake I am obliged to the kind communication of the Rev. J. W. Appleyard, in a letter dated Mount Coke, January 31, 1866.

† *E-kaya* "at home" from *i-kaya* 5. "home," Kafir *ndi-nge na-tyala la-ni-to* (I not being with guilt of thing, *i-tyala* 5. "guilt," *i-ni-to* 9. "thing") "not having the guilt of the thing," Zulu *u-na-hashu li-nini-nd?* (thou-with-horse-which? *i-hashu* 5. horse) "what horse hast thou?"

with the latter, as *hangu* 9. "pig!" *e-zi-gush-eni* "among the sheep" (*i-gusha* 10. "sheep"), &c. Here the forms without the article are equally devoid of the nasal with those which retain it. One case of this kind is also met with in the 3rd (*m-*) class, where the noun *u-nyaka* "a year" (pl. *i-mi-nyaka* 4.) has lost its prefixal *m* on account of the following nasal. (Appleyard § 75. 6. ii.)

466. Totally different, however, is the case with regard to those nouns of the 1st (*m-*) class, in which we find the article, but no derivative prefix. Here, as a rule, the prefix has not been elided, for the simple reason that these nouns have not been formed with the prefix of the 1st (*m-*) class. Some of them have not been formed with any of the concord-indicating derivative prefixes, but are remnants of an early formation of nouns, as *u-baba* "my father," *u-ma* (= Zulu *u-mame*) "my mother," &c. Others again are nouns from originally different classes (or even other parts of speech), which, used as proper names of persons, are on this account constructed like nouns of the 1st (*m-*) class (or gender), as *U-mboŋla* 1. "Wildcat" (*i-m-boŋla* 9.), *U-kala* 1. "Cry-out" (*u-ku-kala* 15.), *u-eve* 1. "Yes," *u-hai* 1. "No," &c. (Appleyard § 75. 1.) These latter nouns were transferred to the 1st (*m-*) class by a logical tendency of the language, because they indicate (or are metaphorically conceived to indicate) persons in the singular. On this account they are preceded by the article of the 1st class, and used with the forms of concord of that class. Examples of a similar logical transference of nouns from one class or gender to another are frequently met with in different languages. In English this process has been fully developed by incorporating into the neuter class (or gender) those nouns, which, originally belonging to the masculine and feminine classes, contain no reference to the natural distinctions of sex. In the languages akin to the Kafir, instances of the transference of nouns by reason of their personal meaning from other classes to the first class occur

frequently; and in some of these instances the process of transition is still visible. For, whilst in Kafir these nouns are now constructed as belonging entirely to the 1st (**m**-) class, in some other languages the forms of the pronouns and adjectives used with the nouns are partly those of the original class (or gender) to which their prefixes refer them. In Otyihereró those nouns of the 5th (**ri**-), 7th (**tyi**-), 9th (**n**-), and 13th (**ka**-) classes which indicate human beings, can either be constructed according to the class of their prefixes, or as if they were nouns of the 1st (**mu**-) class, with the pronouns, adjectives, &c., of that class; and the respective plural nouns of the 6th (**ma**-), 8th (**vi**-), 10th (**ʒon**-), and 14th (**u**-) classes can likewise be treated either as nouns of the 2nd (**va**-) class, or with reference to their own derivative prefixes. (Hahn § 34.)* This is analogous to the occasional use in German of the pronoun *sie* in referring to such nouns as “Weib, Mädchen,” instead of the more grammatically correct *es*. In the Swahéli language of Zanzibar not only names of persons, but also those of other *living beings*, originally belonging to other classes, can be in this

* In ‘**e-rumbi** **r-á-ndye** **e-kúru** **r-á-ya**’ (my eldest brother has gone away) the pronominal elements are in concord with the derivative prefix of the 5th (**ri**-) class, with which the noun **e-rumbi** (i.e. **O-RI-RUMBI**) is formed, but in ‘**e-rumbi** **u-ándye** **o-mu-kúru** **u-á-ya**’ they belong to the 1st (**mu**-) class, to which the noun ‘**e-rumbi**’ has been here logically transferred. In Otyihereró, a noun is not unfrequently used with both forms of concord at once; the possessive adjective, at all events, frequently following the class of the prefix of the noun, while the subjective pronoun of the verb agrees with the class to which the noun (on account of its meaning) has been transferred. Thus in Hahn’s “Omahungi,” &c. (1861) p. 47, in the sentence ‘**o-ma-rumbi** **o-a** **Yozev** **tyi** **va-ka-riʒire**’ (the sons of Joseph when they herded), the ‘**o**-’ preceding the genitive particle ‘**-a**’ is a pronominal element of the 6th (**ma**-) class, whilst the ‘**va**’ in ‘**va-ka-riʒire**’ (they herded) is a subjective pronoun of the 2nd (**va**-) class; and on p. 288, in the sentence ‘**Zakarias** **ihe** **y-e** **u-a-uriʒirue**’ (Zacharias his father was filled), the ‘**y-e**’ (his) is of the 9th (**n**-) class, to which ‘**ihe**’ (father) appears to have belonged originally, and in ‘**u-a-uriʒirue**’ (he was filled) the pronoun ‘**u**’ is of the 1st (**mu**-) class.

manner transferred to the 1st (**m-**) and 2nd (**wa-**) classes, as *n-gombe* 9. "ox," pl. *n-gombe* 10. "oxen." (Dr. Steere's "Table of Concords" in his "Handbook of Swaheli.") Whilst the plurals of these nouns (in Otyihereró, Kisuahéli, &c.,) depend upon the usual rules of correspondence governing those prefixes with which the nouns were originally formed,—the Kafir nouns which have been transferred into the 1st (**m-**) class, form their plurals with the prefix **bo-**, which, when used with its article, is contracted to **o-**. The etymology of this form is not clear. It may be a mere modification of the 2nd prefix **ba-**, or a distinct prefix which originally marked a class of its own, but has now been absorbed by the 2nd class.

467. The mutual correspondence with regard to number, which takes place between the different concord-indicating derivative prefixes of nouns in the KAFIR language, is best shewn by the following tables. The cases in which the prefix has fallen off or been elided before the stem, are indicated by the mark (—).

i-gusha 9. (Hottentot *gu-s-a* fem. sing. obj.) "sheep," pl. *i-gusha* 10.;
i-n-doda (Z.) 9. "man, husband," pl. *a-ma-doda* (Z.) 6.;
u-lu-ti (Z.) 11. "stick," pl. *i-zin-ti* (Z.) 10.;
u-lu-vo 11. "feeling," pl. *i-zim-vo* 10.;
u-suku (Z.) "day," pl. *i-n-tsuku* 10. (Zulu *i-n-suku* 10. and *a-ma-suku* 6.);
u-bambo (Z.) 11. "rib," pl. *i-m-bambo* (Zulu *i-zim-bambo*) 10.;
u-lwimi (Zulu *u-limi*) 11. "tongue," pl. *i-lwimi* 10. (Zulu *i-xi-limi* 10. and *a-ma-limi* 6.);
u-bala (Z.) 11. "desert, wilderness," pl. *a-ma-bala* 6.;
u-lwalwa 11. "flat rock," pl. *a-ma-lwalwa* 6.;
u-bu-so (Z.) 14. "face;"
u-bu-suku (Z.) 14. "night;"
u-bu-si (Z.) 14. "honey;"
u-bu-ze (Z.) 14. "nakedness;"
u-b-oni 14. "evil;"

* These, the only nouns of persons which belong to the 3rd class, are occasionally construed according to their meaning, and not according to their grammatical class (or gender). Thus, with reference to *u-ma-melwane* 3., *u-ma-Ꞥlobo* 3., or *u-ma-lwelwe* 3., I am informed (by the Rev. Tiyo Soga) that it is correct to say *ndi-m-tandile* (1.) "I have loved him," and not *ndi-wu-tandile* (3.). But on the other hand, with reference to *u-ma-melwane* 3., the Kafirs do not say *ye-na* 1. "he," but *w-ona* 3., nor *a-ka-ko* 1. "he is not there," but *a-wu-ko* 3. In the latter case *u-ma-Ꞥlobo* 3. is said to be used with both forms, *a-wu-ko* 3. as well as *a-ka-ko* 1. (*Vide* § 466.)

- u-tyani (Z.*) 14. "grass;"
 u-tyalwa (Zulu u-bu-tywala or
 u-tywala*) 14. "Kafir beer;"
 u-boya (Z.) 14. "hair of an
 animal;"
 u-bomi (Z.) 14. "life, happiness;"
 u-ku-kanya (Z.) 15. "light;"
 u-ku-teta 15. "language" (Zulu
 "talk," &c.);
 u-kw-azi (Z.) "knowledge;"
 u-kw-ona (Zulu u-kw-ona or u-
 k-ona) 15. "to sin."

468. From the preceding list of nouns, in which those which are identical in form and meaning in ZULU are indicated by the letter "(Z.," it will be seen that the correspondence of the classes of the singular and plural numbers does not differ much in Zulu from that in the language of the Frontier Kafirs (Ama//osa). In Zulu, however, we have to notice, that no nouns of the 9th (u-) class appear to exist in which the nasal has been entirely dropped. Those in Kafir, in which this is the case, are evidently late importations into the language.

* In the Bishop of Natal's Dictionary (p. 495 and 504) these nouns u-tyani and u-tywala are, by misprint, ascribed to the 11th (lu-) class.

THE SETSHUANA SPECIES.

469. In the Setshuana and Tekeza dialects some of the prefixes coalesce more with the stem of the noun than they do in Kafir, and this either causes the suppression of the initial consonant of the stem, or the disappearance of the whole or a part of the prefix combined with a stronger explosive pronunciation of the initial of the stem. For example, the former is the case with the initial *b* in SETSHUANA when following the prefix *mo-* of the 1st or 3rd class. The *mo-b* is contracted here to *m-* (§ 113 and 343) as in *m-ōpi* 1. "potter" (= Kafir *u-m-bumbi*), from *xo bopa* (Sesuto *h'o bopa*, Kafir *u-ku-bumba*) 15. "to make pottery," *m-ila* 3. "street" (Zulu *u-m-zila* "cattle track") pl. *me-bila* 4., *m-ele* (Sesuto) 3. "body" pl. *me-bele* 4. (compare Kafir *i-si-bili* 7. "substance of a body"), &c. Whilst the prefix has prevailed over the beginning of the stem in the instances given above,—we find again in the 9th (*n-*) and 10th (*lin-*) classes (according to the rules explained in § 218—220, and 335—337,) that the nasal of the prefix almost always disappears, excepting before monosyllabic stems. In these cases, however, the strengthened form of the initial consonant of the stem (when this is capable of being strengthened) which has in the first instance been called into existence by the nasal, remains,—becoming, as it were, characteristic of these classes, and, in the 9th (*n-*) class, almost representing the prefix. To indicate the presence of the consonant thus strengthened, the mark *∴* has been used.

The case is different in the SE^hLAPI dialect, after the prefix of the 5th (*le-*) class. Here, as the nature of the vowel of the prefix is apparently favorable to a succeeding sibilant, we find that the initial of the stem, when a sibilant, is retained; while after the corresponding plural prefix *ma-* the same initial sibilant is converted into a liquid, as *le-sapo* 5. "bone," pl. *ma-rapo* 6. Also where there is a tendency towards palatalisation of a labial, it is

carried through after the 5th (*le-*) prefix, whilst after the 6th (*ma-*) the original labial may be retained,—as *le-tsele* 5. “female breast,” pl. *ma-bele* 6.

le-tshoḫo (Sesuto **le-tshoh'o**, Tekeza *boko*) 5. "arm," pl. **ma-boḫo** (Sesuto **ma-tshoh'o**, Tekeza *ma-boko*) 6.;
le-sapo or **sapo** (Sesuto **le-sapo**, Kafir i-*tambo*) 5. "bone," pl. **ma-rapo** (Sesuto **ma-sapo**, Kafir a-*ma-tambo*) 6.;
le-huku or **huku** 5. "word," pl. **ma-huku** 6.;
le-hatsi or **hatsi** (Sesuto **le-fatsi**) 5. "land," pl. **ma-hatsi** 6. (compare Kafir *pa-nsi* "beneath," § 436);
ma-ri (Ses.) 6. "blood" (compare Kafir i-*gazi* "blood");

* Setshuāna **ma-béle** (Zulu a-*ma-bele*) 6. means also "Kafir corn" (= Kafir a-*ma-zimba* 6.). In Zulu the singular of this noun, i-*bele* 5., has the meaning "ear of Kafir corn," and also that of "female breast, cow's udder." From the same stem there are in Zulu the following nouns, u-*m-bele* 3. "cow's teat," ("nipple of an animal" in Kafir, Ayliff), i-*si-bele* 7. "man's nipple" (in Kafir "mercy," pl. i-*zi-bele* 8., Appleyard § 491, 2.), and u-*bu-bele* 14. "tenderness, compassion" (in Kafir "grace, pity, kindness, mercy, affection, compassion"). Colenso's Grammar p. viii, Dictionary p. 28.

- se-huba** (Sesuto **se-fuba**, Kafir **i-si-fuba**) 7. "breast, chest," pl. **li-huba** (Sesuto **li-fuba**) 8.; **se-ašla** or **ašla** (Kafir **i-s-anšla**); 7. "hand," pl. **li-ašla** 8.; **se-šlaku** or **šlaku** (Kafir **i-si-šlangu**) 7. "shoe," pl. **li-šlaku** 8.; **se-nkhua** (Zulu **i-si-nkwa**, Kafir **i-s-onka**) 7. "bread, loaf," pl. **li-nkhua** (Zulu **i-zi-nkwa**, Kafir **i-z-onka**) 8.; (e)**m-tsha** (Sesuto **m-ptsha**, Kafir **i-n-dsha**, § 277) 9. "dog," pl. **lin-tsha** (Ses. **lin-ptsha**) 10.; (e)**n-ku** Ses. (Kafir **i-m-vu**) 9. "sheep," pl. **lin-ku** 10.; (e)**n-ko** (Sesuto **n-kó**) 9. "nose," pl. **lin-ko** (Ses. **lin-ko**) 10.; (e)**m-pa** (Ses.) 9. "belly," pl. **lin-pa** (Ses.) 10.; **phukuye** (Sesuto **phōkōyoe**, Kafir **i-m-pungutye**) 9. "jackal," pl. **li-phukuye** (Sesuto **li-pōkōyoe**) 10.; **thuto** (Ses.) 9. "doctrine," pl. **li-thuto** (Ses.) 10. (**χo-ruta** 15. "to teach"); **tau** Ses. (Lour. Marques **i-n-dao**) 9. "lion," pl. **li-tau** (Ses.) 10.; **ku-ana** (Sesuto **konyana**, Kafir **i-m-vana**) 9. "lamb," pl. **li-kuana** (Sesuto **li-konyana**) 10.; **phiri** (Sesuto **piri**, Zulu **i-m-pisi**) 9. "hyena," pl. **li-phiri** (Sesuto **li-piri**) 10.; **khomu** (Sesuto **kh'omo**, § 226) 9. "cow, ox," pl. **li-khōmu** (Sesuto **li-kh'omo**) 10.; (ei)**n-šlu** (Sesuto **n-šlu**, Kafir **i-n-šlu**) 9. "house," pl. **ma-šlu** (Ses.) 10.; **tsèphè** (Zulu **i-n-sepe**) 9. "spring-bok," pl. **ma-sèphè** 6.;* **lo-shu** 11. (Ses. **le-fu** 5.) "death," pl. **lin-tshu** 10. (**χo-shua** 15. "to die" = Kafir **u-ku-fa**); **lō-ri** 11. "cord," pl. **lin-ti** 10.; **lō-bu** 11. "saltpetre or brackish ground" (Livingstone), pl. **lin-pu** 10.; **lo-leme** (Kafir **u-lwimi**, Zulu **u-limè**) 11. "tongue," pl. **li-teme** 10. (Sesuto **le-leme** 5., pl. **ma-leme** 6.); **lo-naka** 1. (Sesuto **le-naka** 5.) "horn," pl. **li-naka** (Ses.) 10. (§ 472, note); **lo-nao** (Kafir **u-nyawo**) 11. "foot," pl. **li-nao** 10.; **lo-χata** 11. (Sesuto **le-h'ata** 5.) "skull," pl. **li-kχata** 10. (compare Zulu **i-kanda** 5. "head," **i-si-kanda** 7. "knob," **u-kanda** 11. "top of bullock's head, cut off with the horns");

* The prefix **ma-** of the 6th class (or gender) is sometimes used for the purpose of forming a sort of second plural to nouns of the 9th (**m-**) class besides their usual plural of the 10th (**lin-**) class. The **ma-** seems to denote "a collection or company" (I. Hughes, Manuscript Grammar), or "a large number" (Frédoux). Thus **pitse** 9. "a horse," **li-pitse** 10. "horses," **ma-bitse** 6. "troops of horses;" (e)**n-ku** 9. "a sheep," **lin-ku** 10. "sheep," **ma-n-ku** 6. "flocks of sheep." This explains, to some extent, how Archbell ("Grammar of the Bechuana Language" p. 10, § 6) fell into the mistake of considering the form with the prefix **li-** as the dual, and that beginning with **ma-** as the plural form.

- lō-lōpa** 11. "yard," pl. **ma-lōpa** 6.;
lo-uniuo 11. "fruit," pl. **ma-uniuo** 6.;
lo-humo 11. "wealth," pl. **ma-humo** 6.;
lo-rato 11. (Sesuto **le-rato** 5., Kafir u-**tando** 11.) "love," pl. **ma-rato** 6.;
bo-siχō (Sesuto **bo-siho**, Kafir u-**bu-suku**) 14. "night," pl. **ma-siχō** (Sesuto **ma-siho**) 6.;
bo-n'no 14. "dwelling place," pl. **ma-nno** 6.;
bo-χosi (Sesuto **bo-h'osi**, Kafir u-**bu-kosi**) 14. "chieftainship, kingdom," pl. **ma-χosi** 6. (*kχosi* 9. "chief" = Kafir i-**n-kosi**);
bo-yañ (Sesuto *dshoan*, Kafir u-**tyani**) 14. "grass;"
bo-yaloa (Sesuto *yoala*, Kafir u-**tyalwa**, Zulu u-**tywala**) 14. "Kafir beer;"
hēlo 15. "place," pl. **ma-hēlo** 6. (§ 435);
χo-rata (Sesuto **h'o-rata**, Kafir u-**ku-tanda**) 15. "to love."

470. The SESUTO dialect thus varies little, either in the forms of the prefixes or in their mutual correspondence, from that of Western Setshuāna, the examples of which given here are taken from the Seǀlapi dialect. How the 11th class or gender in Sesuto

SESUTO PREFIXES.

INFINITIVE AND LOCAL. 15. h'o- (go-)	

has become homophonically identical with the 5th (**le-**) class, has been previously explained, § 456. As all the grammatical forms of the 11th class now seem to coincide with those of the 5th, the 11th class or gender has virtually ceased to exist in Sesuto; many nouns originally belonging to the 11th class having even adopted the 6th (**ma-**) class as their corresponding plural, although the same nouns in Seǀlapi are always used with plurals of the 10th (**lin-**) class. But instances of the latter plural to nouns of the old 11th class are still occasionally to be found in Sesuto, and this causes it to appear as if the 5th (**le-**) class or gender were less exclusively restricted to plural forms of the 6th (**ma-**) class in Sesuto, than in any of the other South African Bâ-ntu languages. With regard to the 6th (**ma-**) class or gender, it is to be remarked that, in one case at least in this dialect, it is found corresponding to the 1st (**mo-**) class. Examples of local nouns of the 15th (**h'o-**) class with corresponding plurals have not, as yet, been found by me in Sesuto.

THE TEKEZA SPECIES.

471. The contraction of the form **mu-l** to **n-** in the first and third classes (§ 343) is the chief characteristic of the TEKEZA species. In other respects the forms of the prefixes are nearer to those in the Middle Branch languages than we find them to be in either of the remaining species of the South-eastern Branch (Kafir and Setshuâna). The following table shewing the correspondence of the derivative prefixes of nouns in the NORTHERN TEKEZA dialect spoken at LOURENZO MARQUES, Delagoa Bay, is, of course, incomplete. It is supposed that the form of the 8th prefix here is **psi-**, as in the dialect of Tette, but the vocabularies (as yet our only materials for the knowledge of these dialects) contain no positive evidence of this. An initial vowel (frequently *a*), which is evidently unconnected with the prefix, occasionally precedes the

noun in these vocabularies. The nature of this vowel is not clear. When an *a* it may be merely the genitive particle.

- e-ko-tshava** (Zulu u-**ku-saba**) 15. "to be afraid" (Kafir u-**ku-saba** 15. "to flee").

B. IN THE MIDDLE BRANCH.

aa. The Mosambique Genus.

DIALECTS OF TETTE AND SENA.

472. The possession of the 12th (**tu-**), 13th (**ka-**), and 16th (**pa-**) classes distinguishes most of the languages of

the Middle Branch from those of the South-eastern. The dialects of the Middle Branch, which are the most nearly allied to the languages of the South-eastern Branch, are only known to us in vocabularies which do not enable us to construct any satisfactory tables of the prefixes. The languages of SENA and TETTE agree with the Kafir language in the forms of most of their prefixes, those of the 10th (**zln-**) class, for example, being remarkably similar. Where they differ from the Kafir prefixes they generally resemble those of the Tekeza, as in the 2nd (**va-**), 7th (**tshi-** or **shi-**), and 8th (**pi-** or **psi-**) classes. In the 14th (**BU-**) class the initial consonant has been almost invariably dropped in the Middle Branch languages; having been preserved in Sofala in a softened form (**vu-**). No certain evidence of the existence of the 11th (**LU-**) class has as yet been observed in the dialects of Tette and Sena. **Ri-rimi** "tongue" may belong to the 5th class (§ 351, note), although, if it be so, it is the only noun of this class as yet known to us in the dialect of Tette, in which the form of the prefix **ri-** has been preserved. In Sena, however, we find also **ri-kombo** 5. "oyster," pl. **ma-kombo** 6. In some nouns of the Tette dialect the prefix of the 5th class seems to have the form **zi-**, as **zi-nyánga** (Sena *nyaŋga*) 5. "horn," pl. **ma-nyaŋga** 6.*, **zi-rúmi** 5. "wasp," pl. **ma-rúmi** 6. In

* Seǀlapi **le-naka** 11. pl. **li-naka** 10., Sesuto **le-naka** 5. pl. **li-naka** 10., Cape Delgado **lu-nyaŋga** 11. pl. *nyaŋga* (10.), Quellimane **ma-nyaŋga** 3. pl. **ma-nyaŋga** 4. One might be inclined to derive the Kafir and Zulu noun **i-m-yánga** 9. "moon" from this stem, thinking of the horns of the moon. Yet it is more probable that this noun has been fashioned from a Hottentot word for moon (*/khā*), as it has not been met with in this signification in any other Bā-ntu languages. The very similar noun **i-m-nyangá** 9. "doctor" is, on the contrary, common to most, if not all, of the South African Bā-ntu languages. The Hottentot word for moon is written by Ludolf (1710) *t'Ga* and *k'chá*, by Kolb (1719) *Tchá* in the Cape dialect; *Kā* by Barrow (1806) in a more Eastern Hottentot dialect; in the !Kora dialect *t'gaam* by Borchers (1801), *t'khaam* (m. s.) and *t'k'-haang-s* (f. s. "month") by Lichtenstein

some nouns (as *ziso* "eye" § 327, *zino* "tooth" § 326) the initial *zi*, though disappearing in the plural (*ma-nu* and *ma-so*), evidently belongs to the stem. In others again it is difficult to say whether *zi* is the prefix or part of the stem of the noun. The following tables of the dialects of Tette and Sena can but be more or less incomplete, and in need of correction. In the enumeration of TETTE nouns, those which have the same form in SENA, are followed by the letter "S."

TETTE NOUNS.

mū-nttu or **mu-ntto** S. (Zulu u-**mu-ntu**) 1. "man, person," pl. **vá-nttu** (S.) 2.;

mu-kázi S. (Zulu u-**m-fazi**) 1. "woman," pl. **va-kázi** or **a-kazi** (S.) 2.;

- ku-nuŋgha** S. (Zulu **u-ku-nuka**) 15. "bad smell;"
- pa-nsi** 16. "land, country, kingdom" (Kafir preposition **pansi** "below, beneath," § 436);
- pa-kati** p-a **u-siku** (Sena **pa-kati** p-a **tsiku**) 16. "midnight;"
- pa-dzuru** p-a **muendo** 15. "span of the foot" (**zuru** = Kafir **i-zulu** 5. "heaven"), § 435.

473. The difference between the dialects of Sena and Tette is very small, the derivative prefixes in both languages being almost identical. **Psi-**, the form of the 8th prefix in Tette, is intermediate between the Sena form **pi-** and the Kafir **zi-** (Setshuâna **li-** or **ri-**). It may be well to observe here that the language spoken at Tette and Sena extends also to MARAVI, to SOFALA, and to Andersson's* CHJILIMANSE. The dialect of the latter agrees most nearly with that of Tette, and next to it with Sofala. A few Chjilimanse words, however, shew a close resemblance to the dialect of Inhambane.

also find here that the 15th prefix has lost its consonant, and has thus become identical in form with the 14th. On the other hand, the 7th (**ki-**) prefix appears to have retained a more primitive form than either in Sena or Tette. Of the 8th, 10th, and 12th classes the forms are uncertain, and we are thus ignorant as to the corresponding plurals of the 7th (**ki-**), 9th (**n**), and 13th (**ka-**) classes. That the 11th class may have merged into the 5th is not an unnatural hypothesis. Traces of the old initial articles are apparently met with in some of the forms of the prefixes.

which has not been preserved in Kafir. This is the 16th (**pa-**) class. The 12th (**TU-**) and 13th (**KA-**) classes (which are also lost in Kafir) have either disappeared in Kihiau, or are so rarely used as not to occur in Krapf's extensive vocabulary. We notice in this language a number of abstract nouns formed with the derivative prefix of the 6th class (**ma-**) which, in these cases, does not correspond as plural to any singular prefix. **Ki-*hiáu*** 7. is spoken by the **Wa-*hiáu*** or **Vé-*ião*** 2. who live in **Kú-*yão*** 15. and are called **Inkíaua** by the Maravi, and **A-*dshóua*** or **A-*dsháwa*** 2. (sing. **Mu-*dshau*** 1.) by other foreigners.

oga 14. "fear" (Kafir **u-ku-oyika** 15. "to fear," Kihiau *ogopa* "be afraid") ;
pa-ndu (§ 435) 16. "place."†

bb. *The Zangian Genus.*

476. Our limited knowledge of the Eastern members of the Middle Branch does not enable us to define clearly the characteristics by which the different genera of this Branch may be distinguished from each other. Upon the whole, our division of the genera into a South-eastern or Mosambique Genus, and a North-eastern or Zangian Genus is mainly geographical. Yet *Kihámba*, *Kinika*, *Kisúáheli*, *Kipókómo*, and *Kisambála* are certainly more closely related to each other than they are to the dialects of Sena and Tette, to Kihiau, or to the Makua language.

* From **ku-góna** 15. "to sleep" in Kihiau, Maravi, Tette, Sena, and Quellimane.

† The preceding specimens of the Kihíáu language are taken from Dr. Krapf's vocabularies, in which the pronunciation of some of the consonants is not quite clear. Dr. Steere (in a letter dated Dec. 22nd, 1866,) has furnished the following examples of this language, which he calls **Tshi-yao** (*Chiyao*) 7. These examples give a few different forms of the prefixes. It also appears from them that the 6th (**ma-**) prefix may in this language correspond as plural to the 11th (**lu-**) prefix.

477. In the Zangian Genus, we see that the prefix of the 10th class has invariably lost the initial part preceding its ending nasal, having been reduced to the latter, with or without a following vowel (**n-**, or **ni-**). In some cases, the nasal of the 10th prefix has a strong effect upon the initial of the stem which follows. Thus in KIKAMBA and KINIKA an initial *ts* may disappear after this **n-** (§ 349 and 350), and after the same prefix in KISUAHELII the initial *l* is changed into *d*, and the initial *w* into *b*. (§ 351.) The rule that nouns of the 9th (**n-**) and 10th (**n-**) classes indicating persons or animals are construed as nouns of the 1st (**mu-**) and 2nd (**va-**) classes is of extensive application in the Zangian Genus. (§ 466.)

478. It is a most singular trait in the languages of this genus that nouns of whatsoever class, when standing in the locative case (which is indicated by the suffix *-ni*) are construed as if they belonged to one of two local classes, viz. the 15th (**ku-**), or 18th (**MU-**) class. According to Dr. Steere's "Table of Concords," this locative case in Swaheli is in concord with forms in *ku* "when implying motion to, or distance from" a thing, and with forms "in *mu*, if it merely expresses being within."

In the Kikamba sentence *y-u-naikie tu-ala ma-ddu-ni ku-a-ke* (Mark vii. 33) "he put the fingers into his ears," the *ku-a-ke* "his" belongs to the 15th (**ku-**) class, although the noun *ma-ddu* "ears" is of the 6th (**ma-**) class, and, as such, usually requires the form *m-ake* 6. "his," as (Mark. vii. 35.) *ma-ddu m-a-ke ma-na-wingiwe* "his ears were opened." (Compare Kinika *ma-sikiro-ni mu-enu* 18. "in your ears," Luke ix. 44, with *ma-sikiro g-enu** 6. "your ears," Luke iv. 21.) Further in Kikamba the noun *ma-u* "feet" is of the 6th (**ma-**) class, and, as such, rules forms like *m-a-gu* "thy," *m-a-ke* "his, her," *m-enu* "your,"—notwithstanding which, we read *iwaiyei* (shake ye off) *mu* (the dust) *ma-u-ni ku-enu* (from your feet), Mark. vi. 11, and *yu-na walukile ma-u-ni mu-a-ke* (Mark. v. 22, "he fell

* This *g* in Kinika is a pronominal representative of the *m* of the 6th (**ma-**) prefix, pointing to an original form of this prefix (perhaps *NGA*), in which probably the nasal and the guttural explosive (*g*) were both represented, as will be more clearly explained in a succeeding chapter.

to his feet")—the *ku-eniu* "your" belonging to the 15th (*ku-*), and the *mu-a-ke* "his" to the 18th (*mu-*) class. (Compare *Kinika ma-gulu-ni mu-a-kwe* 18. "to his feet" with *ma-gulu-g-e* 6. "his feet," Luke vii. 38.) Similarly, although *niumba* "house" in the singular is of the 9th, and in the plural of the 10th class, we find that "go into thine house" (Mark v. 19) is translated into Kikamba thus, *di niumba-ni ku-a-gu* 15., and "into their houses" (Mark viii. 3) *niumba-ni mu-a-o* 18. (*Kinika niumba-ni mu-a-kwe* 18. "in his house," Luke v. 29, *niumba-ni mu-a-ko* 18. "in thy house," Luke vii. 44.) It must, however, be remarked that in Krapf's translations this rule is by no means strictly carried out; for sometimes the genitives following nouns in the locative case are in concord with the class of the nouns, instead of having the genitive form of one of the two locative classes (15th or 18th) mentioned above. Thus we find (Mark. xi. 15 &c.) *niumba-ni y-a Mulungu* 9. "into or in the house of God," and (Mark xi. 1) *ki-ima-ni dsh-a ma-pela* 7. "at the mount of Olives," &c. It will also be perceived, in the examples taken from Dr. Krapf's translations, that the distinction which Dr. Steere has observed with regard to the use of *mu* and *ku*, has not been followed throughout.

479. As far as we know, the locative suffix *-ni* is only met with in the languages of the Zangian Genus of the Middle Branch and in those of the South-eastern Branch, —where its form in the Kafir species is *-ini* or *-eni*, in the Tekeza *-ine* or *-ene*, and in the Setshuâna *-en*, &c. (§ 309 and 273.) In the languages of the South-eastern Branch the nouns with this suffix are always to be construed according to the class of their prefixes, without reference to their local meaning. There is, however, an analogous case in Kafir in the concord required by the majority of prepositions. These are mostly local or other forms of nouns which are either still used as such or have lately become obsolete. Such a noun would naturally require the genitive following it to agree with its own prefix; and, accordingly, in the Middle Branch languages these prepositions are still generally followed by a genitive form in accordance with the class of that noun from which the preposition has been formed. But in Kafir, Zulu, and Setshuâna, almost all those prepositions which were originally nouns, require a genitive form of

the local 15th (Kafir *ku-*, Setshuâna *χo-*) class to follow them. (Appleyard § 491, Colenso § 270.) A case which completely resembles that of the Zangian locatives is met with in the Zulu sentence *e-/al-eni kw-O-m-geni* "on one side of the Umgeni" (Colenso's Grammar p. 82), from *i-/ala*, a noun of the 5th (11-) class, which according to its prefix would require after it the form *l-O-m-geni*. In such cases, I formerly believed that the *ku-* was not to be considered as a pronominal element, but as a directive. In fact, I assumed (as Grout does) that the form *kwa-* which occurs here, was identical with the prefixed directive *kwa-* (Appleyard § 112; § 165, 3; § 172, 3; Colenso § 130)*; but the fact that before proper names of persons, where otherwise *kwa* has its most usual place, it is replaced by *ku-ka-* (*pa-m-bi ku-ka-Faku* "before Faku," Grout § 326), renders it more probable that the "*ku*" in these cases is to be regarded as a pronominal element. Still more convincing proofs are furnished by a comparison of Setshuâna; for, similar prepositions in this language are followed by *χ-a-*, which is clearly the genitive form referring to the 15th (*χo-*) class (Kafir *kw-a-*),—whilst the Kafir preposition *kwa-* has been retained in Setshuâna in the form *kuâ*.

480. In trying to explain this curious feature of the language, we must bear in mind that in Kafir and Zulu the suffix *-ini* or *-eni* is only found when the noun is preceded by the prefixed directive (*s*)*e-*, which latter has, as yet, been met with only in these two languages.† In

* Forms in *-eni-kw-eni*, as *e-~~ma~~-v-eni-kw-eni* "after" (= *e-~~ma~~-v-eni* from *u-~~ma~~-va* 3. "back part of an object"), *//-eni-kw-eni* "at the time when" (*i-//a* 5. "time"), *e-~~ma~~-χ-eni-kw-eni* "in the day when" (*u-~~ma~~-χ-la* 3. "day"), *//esh-eni-kw-eni* "at the time when" (*i-//esha* 5. "time"), seem only to add to the perplexity which surrounds the construction of forms in *-ini* or *-eni*. (Appleyard § 322; 336, 1.)

† In the Tekeza dialect of Lourenço Marques, however, if our vocabularies can be trusted, the suffix *-ine* or *-ene* is used with a prefixed *a-*, which may be identical with the Kafir prefixed directive (*s*)*e-*. Tekeza

Bleek, *S. Afr. Comp. Grammar*.

Setshuâna, on the contrary, we find that the prefixed directives *mo* "in" (§ 438), *ha* "at" (Kafir *pa*, § 436), and *kwa* "in the direction of, to, till, in, at" (Kafir *kwa*), are always followed by the form with the suffix *-en*, which, also, frequently occurs with nouns which are not preceded by any preposition. In the latter case, however, Livingstone (Analysis p. 17) and Frédoux (§ 7) consider this termination to imply the presence of such a prefixed directive (or preposition). In the Zangian languages, nouns with the suffix *-ni* are not now preceded by any of these prefixed directives; but the forms of concord used with nouns in this locative case appear to indicate that it was formerly preceded by one of two (or more) prefixed directives, which were, in this instance, promoted to the rank of concord-indicating prefixes of nouns. These prefixed particles (which were originally case-indicating directives preceding the regular derivative prefix of the noun) have now fallen off, but the concord still indicates their former presence. Let us take for an example the Kikamba phrase *y-u-na-wa-lukile ma-u-ni mu-a-ke* 18. "he fell at his feet" (Mark. v. 22), and compare it with the Setshuâna translation *a oêla mo nao-n ts-a xaχue* 10. The prefixed directive MU- (which probably originally preceded the *ma-u-ni*) has been lost in Kikamba, but is still indicated by the pronominal element "mu,"—(the prefixed directive having become here the concord-indicating element). In Setshuâna, in which (as we have seen in these cases) the forms of concord always agree with the derivative prefix of the noun, the latter has been dropped, *nao* being an abbreviation of *li-nao* (Kafir *i-zin-nyawo* or *i-n-nyawo*) 10., the plural of *lo-nao* (Kafir *u-nyawo*) 11. The concord also here is visible in the pronominal element "ts"

a-mi-ti-ne = Kafir *e-mi-zi-ni* (Setshuâna *mo-me-tse-n*) "in the settlements, kraals," Tekeza *a-ma-χlo-ene* = Kafir *e-ma-χlw-eni* (Setshuâna *mo-ma-iχlo-n*) "in the eyes," Tekeza *a-m-dolo-ene* = Kafir *e-ma-lilw-eni* (Setshuâna *mo-ma-u-lelo-n*) "on the fire."

(Kafir "z"), which is a representative of the derivative prefix *li-* or *ri-* (Kafir *zi-*). The translations of this phrase into both languages (Kikamba and Setshuâna) thus agree in making the concord only visible in the forms following the noun, whilst the prefixed particle, which may be considered as the source of the concord, has been dropped. In fact we conclude that Kikamba *ma-u-ni mu-a-ke* stands for **MU**-*ma-u-ni mu-a-ke*, just as Setshuâna *mo na-o-ñ ts-a xaxue* is an abbreviation of *mo li-nao-ñ ts-a xaxue*. But the two languages differ in this—that in Setshuâna the concord-indicating particle was a derivative prefix, and in Kikamba a directive, prefixed to the form of the noun with its own derivative prefix.* In the latter instance, the local directive has assumed the position of a concord-indicating prefix, and thus the forms of concord refer to it, and not to the regular derivative prefix of the noun.†

480. The prefixed directives mentioned above as having assumed the character of concord-indicating derivative prefixes of nouns, were probably originally not quite identical with the prefixes **mu-** of the 3rd, and **ku-** of the 15th class. At all events, the forms of concord required by the Zangian locative case in **MU-** are different from those of the 3rd (**mu-**) class, and we have, therefore, provisionally identified these **MU-** forms with the 18th (**mo-**) class in Otyihereró. Similarly, it is not improbable that the Zangian forms in "**ku-**" which are in concord with the locative case, may have originally belonged to the 17th (Otyihereró **ko-**) class; but as their forms are, as far as we know, the same as those employed in the 15th (**ku-**) class, we have placed them under the head of this latter class.

* Just as we find plural or diminutive prefixes prefixed to nouns formed with other prefixes. (*Vide* p. 145.)

† That local derivative particles of nouns may impart to the nouns formed with them a meaning analogous to our case terminations, has been already remarked with regard to some Hottentot derivative suffixes. (§ 447.)

KIKAMBA.

481. **Ki-kámba** 7. (spoken by the **A-kámba** 2.) has more fully preserved the original distribution of the nouns into classes or genders than either **Kiníka** or **Kisuáheli**. In the two latter languages we have not, as yet, met with any traces of the 12th (**tu-**) class. **Kikamba** agrees with the languages of the Mosambique Genus in making the 12th (**tu-**) class correspond as plural to the 13th (**ka-**). As we shall see hereafter, the Angola language is distinguished by the same peculiarity, although in this respect it appears to stand alone among the members of the South-western or Bunda Genus, in which the 14th (**u-**) class generally corresponds as plural to the 13th (**ka-**).

KIKAMBA NOUNS.

mú-ndu (Zulu **u-mu-ntu**, **Kisambala** **mu-ntu**, **Kiníka** **mu-tu**, **Suáheli** **m-tu**) 1. "man, person," pl. **a-ndu** (**Kafir a-ba-ntu**, **Kisambala** **wa-ntu**, **Kiníka** **a-tu**, **Suáheli** **wa-tu**) 2. ;

- kũ-du** 15. "ear," pl. **mă-ddũ** 6. (§ 434, note);
- ku-u** 15. "foot, leg," pl. **ma-ú** 6.;
- wa-ndu** 16. "place" (§ 435).

KINIKA AND KISUAHELÍ.

482. In KINIKA and KISUAHELÍ the decay of the original grammatical structure is far greater than in Kikám̄ba. We find in Kinika that a noun which originally belonged to the 3rd (**mu-**) class, is now, on account of the loss of its initial nasal, in concord with forms of the 14th (**u-**) class, although retaining a plural form of the 4th (**mi-**) class, which latter thus appears in Kinika to correspond to the 14th (**u-**) class. It is also remarkable in Kinika and Kisuáheli that the 10th prefix may precede instead of replacing the 11th, which in this case always loses its initial liquid (*l*), which is otherwise retained in Kinika. When the 10th prefix either precedes the **u-** of the 11th, or replaces the latter, it (the 10th prefix) assumes in

Bleek, S. Afr. Comp. Grammar.

This transference has gone so far, that nouns which formerly clearly belonged to the 14th class, as *u-ssó* (Kafir *u-bu-so* 14.) “face,” have adopted a plural of the 10th (*n-*) class. It is probable that this peculiar correspondence of the classes is not an ancient feature in the structure of the Bâ-ntu languages, but due to the influence of modern false analogies. On account of this plural correspondence, I considered it practically more convenient to call this amalgamated (*u-*) class the 11th, although it includes a great number of abstract nouns which originally belonged to the 14th class. To the Kisúáheli nouns previously given in the Kikámba and Kiníka lists, it is only necessary to add the few which follow. They are all taken from Krapf’s publications; but, in the construction of the Table of the Kisúáheli prefixes, Dr. Steere’s “Table of Records” has been of much assistance. The latter work

illustrates the Swaheli language as spoken at Zanzibar, whilst Dr. Krapf's publications represent the same language as spoken at Mombas (*Ki-suáheli dsh-a Om-wita*). A vocabulary of the Swaheli dialect of Cape Delgado is in Dr. Peter's Collection; and manuscripts containing pieces of native literature exist in the purest and most ancient of the Swaheli dialects,—that which is spoken on the Islands of Patta and Lamu.

KISAMBALA.

484. *Ki-sambala* 7. is spoken in *U-sambala* 14. by a people called by Dr. Krapf *Wa-sambára*. The following nouns, given in a letter from Dr. Steere (dated Dec. 22nd, 1866), are my only materials for forming an outline table of the derivative prefixes of the nouns in the Kisambala language. It appears as if false analogies had also extended their influence to this language. At least, we attribute to this cause the fact that the 8th (**vi-**) prefix corresponds here as plural not only to the 7th (**ki-**), but also to the 13th (**ka-**). The identity of the consonant of the two singular prefixes **ki-** and **ka-** appears to have been the misleading element. The use of the 10th (**ny-**) prefix as plural to the 14th (**u-**) is also ascribable to the identity of the vowel of this latter prefix with that of the 11th (**lu-**); the 11th prefix being properly entitled to the 10th (**n-**) as its corresponding plural. It has

already been remarked that the prefix of the 11th (lu-) class has in the Zangian dialects a strong tendency to lose its initial letter, thus becoming identical in form with the 14th (u-) prefix. The Kisambala language appears, phonetically speaking, to stand nearest to *Ki-pokomo* 7. (spoken by the *Wa-pokomo* 2.); in fact many words in the two languages are identical.

cc. Languages of the Interior.

485. Comparative philology can only follow at a distance the march of geographical discovery. The extensive vocabularies collected by DR. LIVINGSTONE in the course of his travels, and preserved in manuscript in the Grey Library, are most valuable in affording a knowledge of the languages of the region between those tracts of country in which the better known languages of the Mosambique and Bunda genera are spoken. But we must know more with regard to the plural forms of the nouns, and also have the forms of concord illustrated by some phrases, before it be possible to construct reliable tables illustrating the correspondence of the derivative prefixes in these intermediate languages*. Among the latter, the dialects of the **Ba-lojazi** 2. (? Lobale) and **Ma-ponda** 6. (**Ba-maponda** or **Ba-ponda** 2.) are evidently varieties of one language, which can be recognised as belonging to the South-western or Bunda Genus. To define the exact position which the dialects of the **Ba-nyeniko**, **Ba-toka**, **Ba-rotse**, **Ba-shubea**, and **Ba-yeiye** or **Ba-khoba** would occupy in a classification of the languages of the Middle Branch, must be the work of further research.

We find that **mo-** is the prefix of the 3rd class in all these dialects, and corresponds to **mi-** of the 4th class in the dialects of the Balojazi, Batoka, and Bashubea. In the dialects of the Maponda and Banyeniko the 4th prefix bears the form of **me-**. The 5th prefix is **li-** in the dialects of the Balojazi, Banyeniko, and Borotse, **li-** or **le-** in those of the Maponda and Bayeiye, and **li-** or **i-** in that of the Bashubea. Its plural is (as always) formed by the 6th prefix, which is **ma-** in all these dialects, with a variation to **me-**, which at least occurs in the dialects of the Batoka, Bashubea, and Bayeiye. The 11th prefix has the form **lo-** in the dialects of the Maponda, Banyeniko, and Bashubea, **do-** in that of the Borotse, and **ro-** in that of the Bayeiye.

* When Livingstone's more extensive vocabulary of the language of the BAROTSE (which is accompanied by a Setshuana translation only) has been fully deciphered, we shall doubtless be able to construct a fairly satisfactory table of the derivative prefixes of the nouns in this language.

486. Of the derivative prefixes of nouns in the language of the **Ba-yeiye** 2. (a people called **Ba-hxoba** 2. or **Ma-hxoba** 6. by the Betshuana) I have drawn up the following table, which I give here as a mere attempt. The table is incomplete, as the plurals corresponding to the 7th (**se-**) and 11th (**ro-**) classes have not yet been ascertained. The correspondence of the 10th (**zin-**) class as plural to the 13th (**ka-**) is still doubtful; having been established in one instance only, and it is possible that

BAYEIYE PREFIXES.

SINGULAR.	PLURAL.
1. mo-	2. ba-
3. mo-, om- mu- m-(b)-	4. me-
5. le- li-	6. ma-, ama-
7. se-	
9. n-, o-n-, en- m-, u-m-	10. zin-
11. ro- (lo-)	
13. ka-	10. zin-
14. o-	
15. ko-	

the plural **zin-kone** 10. corresponds here (as in most kindred languages, §348) to a singular of the 11th (**ro-** or **lo-**) class, and that the word with the prefix **ka-** (**ka-kone** 13.) given in Dr. Livingstone's vocabulary is merely a diminutive. But, on the other hand, we have to take into consideration the fact that also in the Nano language of Benguela at least one case occurs in which the 10th (**ʒo-**) class forms the plural to a noun of the 13th (**ka-**) class. (§ 495.)

kú-bwa, Otyihereró **o-ku-ua**)

dd. *The Bunda Genus*

487. The languages of the South-western or Bunda Genus are distinguished by the use of the demonstrative particle *o-* as prefixed article. This article itself, in the Bunda Genus, is only slightly affected by the prefix which follows it; but the vowel of the derivative prefix of the noun has been, in more than one instance, assimilated to the vowel of the article; and the prefix may even adopt the latter vowel when used without the article. This is chiefly the case with the 10th prefix, of which the vowel *i* (supposed, as we shall see hereafter, to have descended from an original *a*) has been converted into *o* in most Bunda languages. In the case of this prefix (Otyihereró **ʒ'on-**), and in those of the Otyihereró 16th (**po**), 17th (**ko-**), and 18th (**mo-**) prefixes, we are not sure whether it is a merely euphonic influence which has commuted the vowels of these prefixes, or whether we have to do here with demonstrative pronouns preceding nouns which have lost their original derivative prefixes, or, at least the main portion of them. Thus Otyihereró **ʒ'on-** might be really **ʒ'-o-n-**, the **n-** being in this case to be considered as the only remnant of the original derivative prefix, whilst the **ʒ'-** would be a pronominal element of the 10th class forming with the demonstrative particle *-o* a demonstrative pronoun. However, it must be remembered that this explanation is merely hypothetical, and I should prefer to ascribe the *-o* which is now found in these prefixes, to the force of euphonic assimilation.

which had moulded vowels, originally different, into likeness with the article which so frequently preceded them.

488. It may also be that the article *o-*, like the English article *the*, is only the remainder of an old demonstrative pronoun,* which originally had different forms agreeing with the various classes of nouns to which it referred. Admitting that the pronominal element may be reduced to a mere vowel (as we have seen it to be in Kafir),—such a vowel would be exceedingly liable to amalgamate with the demonstrative particle *o*. It may be that further investigations will afford historical proof of this combination; but until such proof has been found, it will be safer merely to consider this *o-* as a demonstrative particle used as an article.

489. In the Bunda Genus the article *o-* precedes nouns in similar circumstances to those in which the Kafir article is employed. The latter was, as we have seen, originally a pronominal element identical with the derivative prefix. (§ 461—464.) Usage must, upon the whole, determine in which instances this article is to be employed, and in which to be omitted, in the Bunda languages. As a general rule it may be stated that this *o-* in the Bunda Genus possesses more clearly the power of an article than the initial vowel which precedes the derivative prefixes in Kafir; and that it has far less become a part of the derivative prefix than is the case with the initial vowel in Kafir.

OTYIHERERO.

490. The *O-tyi-hereró* or Damara language (spoken by the *O-va-hereró* 2. and *O-va-mbandierú* 2.) is richer in classes of nouns than any other known Bâ-ntu language. Besides the sixteen classes which originally belonged to the Middle Branch languages, Otyihereró has two others which are apparently the individual property of

* Formed by the combination of a demonstrative particle with the pronominal element.

Bleek, *S. Afr. Comp. Grammar*.

the language. It may be that the 17th (**ko-**) and 18th (**mo-**) classes are only later modifications of the 15th (**ku-**) and 3rd (**mu-**) classes respectively; for, the forms in *o* may have been originally demonstrative pronouns rather than true derivative prefixes. But at the present time, at all events, the 17th (**ko-**) and 18th (**mo-**) prefixes have—by certain distinct forms of concord in which they respectively differ from the 15th (**ku-**) and 3rd (**mu-**) classes,—gained the right to be considered as distinct classes; nor can it be denied that the **ko-** and **mo-** may originally have been distinct prefixes. It may, however, also be, that the vowel *o* of these prefixes is due to that process of assimilation of the vowel of the prefix to that of the article, which has been noticed in § 487, and which, as regards Otyihereró, appears to have permanently affected the forms of the prefixes of the 10th (**ʒon-**) and 16th (**po-**) classes.

491. It is remarkable that the 5th prefix (which originally must have had the form **ri-**) is always contracted in Otyihereró to **e-**, before which form the article *o-* disappears. The same contraction occurs in Sindonga (Ovambo) and Nano (Benguela), also in Angola and Kongo, although the two last-named old languages have retained in many cases the original form **ri-** (with the article, *o-ri-* in Angola and *e-ri* in Kongo).^{*} In no other Otyihereró class is the prefix omitted, or as strongly contracted as in the 5th (**ri-**) class. In the 10th (**ʒon-**) class the two first letters of the prefix (**ʒo-**) are always retained in Otyihereró nouns, and the ending nasal only is modified. (§ 321.) The few plurals to singular nouns of the 14th (**u-**) class are all formed by placing the 6th (**ma-**) prefix before the full form with the 14th prefix **u-**, whilst the plurals of singular nouns of the 15th (**ku-**)

^{*} It may, however, also be that the **e-** is a contraction of *o-ri*, and not merely an abbreviation of **ri-**, and that the contracted form with the article (**e-**) superseded the form **ri-** without the article in Otyihereró and other languages.

class either substitute **ma-** for **ku-**, or add **ma-** to the form with **ku-**. (§ 454.)

492. With regard to nouns which indicate personal beings, they may be transferred from any class to the first, and may be used, either wholly or partly, with forms of concord of the 1st (**mu-**) class and in the plural of the 2nd (**va-**) class. The nouns indicating "father" and "mother" appear to have been originally treated as if of the 9th (**n-**) and 10th (**ʒon-**) classes, although the prefixal *n* does not appear in them, and they may not even have been originally formed with one of these prefixes. When transferred in the plural to the 2nd (**va-**) class they usually have **o-** as their prefix, which appears to be identical with the Kafir and Setshuâna prefix **bo-** used with the same nouns. (§ 466.) This derivation, at all events, appears more probable than that this Otyihereró plural prefix **o-** is derived from an original **ʒo-** of the 10th class, as Hahn seems to suggest.

493. The Missionaries who first learned and described this language are more positive with regard to the meaning which they ascribe to the derivative prefixes of the nouns, than any other observers of the peculiarities of the Bâ-ntu languages. Although some of their distinctions are fanciful, and others at least subject to numerous exceptions, it cannot be denied that in more than one instance they have given, if not the original meaning of the prefix, at least that which it now chiefly possesses in the language. What the Rev. C. H. Hahn thinks about the prefixes is to be found in his "Grammatik;" it may, however, be interesting to the student to hear what the Revd. J. RATH says upon the same subject in his Manuscript Vocabulary preserved in the Grey Library, and in order to state this in his own words, I shall give the German untranslated.

1. **mu-** (pl. 2. **va-**). "Dieses Präfix hat nur der Mensch. Vor ein Verbum gesetzt, bezeichnet das dadurch gebildete Substantiv den oder die, welche die Handlung verrichten oder in dem Zustande sich befinden, welche im Verbum liegen." (MSS. p. 446.)

3. mu- (pl. **4. mi-**). "Die meisten Pflanzen haben dieses Präfix." (§ 428.) "Die damit vorhandenen abstracten Worte geben den Eindruck, dass der Begriff einer gewissen Vollständigkeit damit verbunden ist." (MSS. p. 446.)

5. e- (pl. **6. ma-**). "Das Präfix **e-** findet sich häufig an solchen Gegenständen, welche nur in der Einzahl oder paarweise vorhanden sind: **e-yuru** Himmel; Nase" (vide § 494, list of Otyihereró nouns); "**e-hi** Erde; **e-tambo** Rücken; **e-nkoti** Nacken, Genick; **e-yo**, **o-ma-yo** Zahn, Zähne, die beiden Reihen; **e-ke**, **o-ma-ke** Hand, Hände; **e-punga**, **o-ma-punga** Lunge, Lungen. Möglich, dass ersteres die Ursache ist, dass es auch abstract und anders für Gegenstände gebraucht wird, welche einzig in ihrer Art sind, sowohl im guten als bösen Sinn; und dass durch letzteres der Plural gewissermassen zum Dual wird. Steigbügel nennen die Damara **o-ma-poha**, und da sie diese erst nach der Ankunft der Europäer, oder doch nicht vor ihrer genauern Bekanntschaft mit den Namaqua kennen gelernt, so sollte man vermuthen, dass sie noch das Gefühl haben, **ma-** sei das passende Präfix für paarweise existirende Sachen." (MSS. pp. 94 and 95.) Vide p. 165, note.

6. ma-. "Zu dem bei **e-** bemerkten, dass es nämlich häufig bei paarweise vorhandenen Gegenständen angewandt wird, lässt sich noch hinzufügen.

"a. Dass es oft mit Verbas verbunden wird um einen Ort anzuzeigen, wo eine derartige Handlung statt findet, z. B. **o-ma-pambero**" (Nath, *pamba* flechten; dicht zusammenkommen, vereinigen), "**o-ma-ko-turiko**" (Aufhängestelle, *turika* aufhängen), "**o-ma-kondero**" (Übergangsstelle, Furth, *konda* übersetzen, übergehen), "&c. In diesem Falle ist das Präfix wahrscheinlich von **o-mo-na** 18. abgeleitet." (The last suggestion is very doubtful.)

"b. Bei Worten wie **o-ma-indyombo**, **o-ma-yambe**" (Verläumdung, *yamba* verläumden), "und derlei hängt das Präfix wahrscheinlich mit **o-ma-mbo**" (Worte) "zusammen, so dass solche Worte eigentlich bedeuten: Lügenworte, Verläumdungsworte." (§ 426.)

"c. Die meisten Sammelnamen haben dieses Präfix." (MSS. p. 421.)

7. tyi- (pl. **8. vi-**). "Für dieses Präfix passt am besten die Bezeichnung: 'sächlich.' Es findet seine Anwendung bei Werkzeugen, als *Dingen*, womit die in der Wurzel liegende Handlung bewirkt wird, oder die dazu verwandt werden, z. B. **o-tyi-havero** Sitzding" (Stuhl, Bank); "**o-tyi-kamo** Deckel; **o-tyi-hupuro** Spaten; von *havera*" (sitzen), "**kama**" (drücken, auswinden), "**hupura**" (graben). "In diesem Falle hängt das Präfix wohl mit **o-tyi-na**, Ding, zusammen." (§ 441.) "Auch auf andere Gegenstände, wie Mensch, &c., angewandt, werden diese zur blossen Sache erniedrigt,

wie *o-tyi-mu-ndu* alter, unbrauchbarer Mensch" (§ 430), "*o-tyi-ñ-gombe* alter Ochs" (§ 226), "*o-tyi-ſ'u* altes Schaf" (*o-n-tu* or *o-n-dſ'u* 9. "sheep" = Kafir i-*m-vu*, Setshuāna *ñ-ku*). "Ausser dem zweifelhaften *o-tyi-angapara*" (Glück) "ist bis jetzt kein abstractes Wort mit diesem Präfix gefunden, das einen guten Begriff hat. Dasselbe gilt auch von dem Plural *vi-*, mit dem sich mehrere Worte finden, welche keinen Singular haben. In einigen wenigen Fällen kommt *tyi-* auch bei Platzzeigennamen vor, wo es mit *o-tyi-roñgo*, Platz, zusammenhängt, und eigentlich Adjektiv ist." (MSS. pp. 554 and 555.)

9. *ñ-* (pl. 10. *ſ'on-*). "Die meisten Thiernamen haben dieses Präfix; die damit versehenen abstracten Worte haben vorwaltend einen guten Begriff." (MSS. p. 391)

11. *ru-* (pl. *tu-*). "Die bis jetzt mit diesem Präfix aufgefundenen concreten Wörter geben den Eindruck, dass damit der Begriff der Länge, Höhe, Ausgestrecktheit und Ausgedehntheit, Dünne verbunden ist. Aehnliches zeigt sich auch bei den abstracten Wörtern, bei denen häufig der Begriff der Übertragung auf andere scheint statt zu finden. Vergleiche *e-pondo*" (5. Bedächtigkeit, Langsamkeit, Gelassenheit, Geduld) "mit *o-ru-a-ponda*" (11. *u-n-o-ru-a-ponda*, wenn jemand sehr lange krank ist, ohne sich zu bessern; auch wenn ein Kind lange nicht ans Gehen kommt); "*e-ho-ſ'e*" (5. Thräne) "mit *o-ru-hoſ'e*" (11. Traurigkeit, Betrübniß; das Weinen); "*o-ndy-ira*" (9. Weg, Pfad) "mit *o-ru-ira*" (11. Fusspfad*); "*o-mu-tyira*" (3. Schwanz, &c.) "mit *o-ru-tyira*" (11. langer, dünn gestreckter Schwanz), "*o-u-vara*" (14. Ansehen, Macht, Herrschaft über Dinge) "mit *o-ru-vara*"

* It appears to me, however, probable that the nouns *o-m-dyira* 9. "way, path" and *o-ru-ira* 11. "footpath" are formed from different stems. I identify the stem of the latter noun (*o-ru-ira* 11.) with that of Zulu *u-m-zila* 3. "cattle track" = Setshuāna *m-ila* (i.e. *MO-BILA*) 3. "street," pl. *me-bila* 4. The former noun (*o-m-dyira* 9.) occurs in the same meaning as in Otyihereró and in forms varying only slightly, in almost all the South African Bā-ntu languages: Kafir and Tekeza i-*m-ñlala* (Zulu pl. i-*zila-ñlala* 10.), Setshuāna *tsela* (pl. *ñtsela* 10.), Inhambane *dshilla*, Tette *dshira*, Sena *shira*, Quellimane *m-dila*, Cape Delgado *m-shira*, Kisuáheli (Mombas) *m-dia*, Swáheli (Zanzibar) and Kipokómo *m-dshá*, Kinika (e) *m-dshira* (pl. [e] *m-dshira* 10.), Kikamba *m-sia* (pl. *m-sia* 10.), Banyenke *m-ſera* (or *m-dshela*), Batoka *m-zela*, Bashubea *m-zera* (*m-zela*, or *tsera*), Bayeiye *m-dshera*, Borotse *m-dera* or *m-dela*, Balojazi and Baponda *m-ñela* (Livingstone's *ñgela*), Otyihereró *o-m-dyira* (pl. *o-ſ'o-m-dyira* 10.), Sindonga (Ovambo) *o-m-dyila*, Nano (Benguela) *o-m-dyilla* (pl. *o-ſ'o-m-dyilla* 10.), Angola *o-m-shila* (Cannecattim's *ngilla*, pl. *jingilla* 10.), Kongo *m-shilla* (Cann.), Dikele *m-zyeſ'a* (pl. *m-m-n-zyeſ'a* 6.), Benga *m-dshea* (pl. *m-dsheu* 10.), Dualla *m-gia* (pl. *m-m-n-gia* 6.), Isubu *m-dshea* (pl. *m-m-n-dshea* 6.).

(11. "Macht, Ansehen über andere Menschen, dabei kann mann aber arm an Gütern sein"). "Auch ist zu bemerken, dass Adverbia der Zeit, wie *a-ru-he* 'immer' mit diesem Präfix zusammenhangen; siehe *o-ru-veſe*" (11. Raum, Gegend, Stelle, Zeit). "Ebenso werden die Wiederholungszahlen damit gebildet; *ru-mue* einmal, *tu-vari* zweimal." (MSS. p. 525.)

13. ka- (pl. **14. u-**). *a.* "Verkleinerungs-Präfix, *o-mu-ndu* (1.) Mensch, *o-ka-ndu* Menschlein; *o-n-tu* (9.) Schaf, *o-ka-s'u* Schäflein; *o-n-dyuo* (9.) Haus, *o-ka-n-dyuo* Häuslein."

b. Mit **ka-** werden abstracte Worte gebildet, welche in ihrer Art auch eine Verkleinerung ausdrücken; *o-ka-nye* scheint kleiner Hass zu sein, von *nyengua* " (passive Form mit activer und passiver Bedeutung, hassen, verachten); "*o-ka-s'uva-tui* feines, scharfes, gutes Gehör" (*s'uva* hören, verstehen, *o-ku-tui* 15. Ohr); "*o-ka-tarera* wenn einer meint alles sehen zu müssen" (das Zusehen, von *tarera* aufpassen, sich vorsehen, die respective Form von *tara* sehen).

c. Mit **ka-** beginnen im Otyihereró fast alle Eigennamen." (The proper names of persons formed with *ka-* do not however belong to the 14th [**ka-**], but to the 1st [**mu-**] class of nouns.) "Ob es das Anrede-Präfix ist? In einer Erzählung wird ein Fluss angeredet *ka-ndundu*." (*o-n-dundu* 9. mountain, hill.) "Hat es etwa Ähnlichkeit mit der deutschen Nachsilbe *-chen*, Fritz, Fritzchen? Bei einer Frage, warum ein Häuptling *Hukanun*, und nicht wie fast alle andern mit einem Namen genannt ist, der mit **ka-** beginnt, wurde geantwortet, er sei ja ein sehr angesehener Mann. Ganz richtig war die Antwort nicht, denn es gab mächtigere Häuptlinge, als dieser war, deren Namen mit **ka-** begannen. Vielleicht aber hat sich vom Sprachgefühl etwas in der Antwort ausgesprochen." (MSS. p. 405.)

14. u-. "Bei diesem Präfix lässt sich ein dreifacher Gebrauch unterscheiden.

"1. Ist es Plural-Präfix von **ka-**: *o-ka-kambe*" (Pferd) "pl. *o-u-kambe*"; *o-ka-ti*" (Stock) "pl. *o-u-ti*;

"2. Bei einigen wenigen Worten ist es Singular-Präfix, und nimmt dann das Präfix **ma-** als Plural-Präfix an.

o-u-ta" (Bogen) "plur. *o-ma-u-ta* (6.);

o-u-tuku" (Nacht) "14. *o-ma-u-tuku* (6.);

"3. Finden sich mit diesem Präfix verhältnissmässig die meisten abstracten Worte; und es ist nicht unmöglich, dass es sich dem grössten Theil der Wurzeln vorsetzen lässt, um ein Abstractum davon zu bilden." (MSS. p. 587.)

15. ku- (plur. **6. ma-**). "Präfix des Infinitiv. Bei manchen Worten bleibt die Silbe *ku-* auch im Plural, z. B. *o-ku-ti*" (Feld, Land, Gegend) "pl. *o-ma-kuti*; bei andern fällt sie aus, *o-ku-rama*" (Bein, Englisch "leg") "pl. *o-ma-rama*." (MSS. p. 415.)

494. As the Otyihereró forms of the derivative prefixes are not contracted when combined with the article *o-*, excepting in the 5th (*ri-*) class,—it appears superfluous to give more than the table of the prefixes with the article; for, the forms without articles can in all cases (excepting, of course, the 5th class) be arrived at, by merely eliding the *o-*. As regards the vocative, it is worthy of remark that not only the article, but even the derivative prefix is occasionally omitted in this case. The nasal of the prefixes of the 9th (*n-*) and 10th (*S'on-*) classes falls off before stems beginning with *h* and *S'* (*s*), as stated § 230; while in some other cases the nature of the initial consonant of the stem is in its turn affected by the nasal, as described in § 352.

OTYIHERERO NOUNS.

*o-mu-haS'e-ndu** 1. "wife," pl.
o-va-haS'e-ndu 2.;
o-mu-rume-ndu 1. "man," pl.
o-va-rume-ndu 2.;

* Vide note at the end of this paragraph.

- o-m-a-tye** (for **o-mu-na-tye**, Kihiau **m-ana-dshe**) 1. "child," pl. **o-v-ana-tye** (Kihiau **v-ana-dshe**) 2. ;
- o-m-irityimuke** 1. "a presumptuous, audacious one," pl. **o-v-erityimuke** 2. ;
- o-mu-ini** (Kafir u-**m-nini**) 1. "owner, possessor," pl. **o-v-eni** (Kafir a-**ba-nini**) 2. ;
- o-m-aigu** 1. "younger brother or sister," pl. **o-v-aigu** 2. ;
- o-tate** (Bunda **tata**) 9. and 1. " (my, our) father," pl. **o-o-tate** 2. ;
- o-mama** (Zulu u-**mame**) 9. and 1. " (my, our) mother," pl. **o-o-mama** (Zulu o-**mame**) 2. ;
- u-nyoko** (Kafir u-**nyoko**) 9. and 1. " (your) mother ;"
- ina** (Kafir u-**nina**) 9. and 1. " (his, her, their) mother," pl. **o-o-ina** (Kafir o-**nina**) 2. ;
- iho** (Kafir u-**yiŋlo**) 9. and 1. " (your) father ;"
- ihe** (Kafir u-**yise**) 9. and 1. " (his, her, their) father," pl. **o-o-ihe** (Kafir o-**yise**) 2. ;
- o-mu-ti** 3. "tree, plant, medicine," pl. **o-mi-ti** (§ 428) ;
- o-mu-tima** (Sena and Tette **mu-tima**, Makua **mu-rima**, Kihiau **m-tima**, Banyeniko **mo-tima**, Sindonga u-**m-tima** "breath," Nano **u-tima**, Angola **mu-shi-ma**, Kongo **mu-tima**, Mpongwe **o-rema**, Dikele **lema**, Dualla and Isubu **mo-lema**) 3. "heart," pl. **o-mi-tima** (Makua **mi-rima**, Nano **o-vi-tima**, Angola **mi-shima**, Kongo **mi-tima**, Dikele, Dualla, and Isubu **mi-lema**) 4. ;
- o-mu-eS'e*** 3. "moon, month," pl. **o-mi-eS'e** 4. ;
- o-mu-ise** (Zulu u-**mu-si**, Kafir u-**m-si**, Setshuana **mō-si** or **mu-si**, Tekeza **mo-se**, Makua **mw-ishi**, Kinika and Kipokómo **mo-si**, Kisuáheli **mó-shi**, Banyeniko and Bayeiye **mu-si**, Batoka **m-busi**, Balojazi **mo-ezi**) 3. "smoke ;"
- o-mu-nue** (Zulu u-**mu-nwe**, Kafir u-**m-nwe**, Tette **mú-nwe**, Barotse and Bayeiye **mo-**

* Sofala **mu-edzē**, Manika, Sena, Tette, Maravi, Anjoane, and Cape Delgado **mu-ēzi** or **mu-eze**, Makua **mu-ēri** or **mu-ere**, Kikamba **mu-ēi**, Kisuáheli, Kinika, Kipokómo, and Kihiau **m-ezi**, Batoka and Borotse **mo-ezi**, Bashubea **mo-edzi**, Sindonga u-**mu-ezi**, Mpongwe **o-gwēli**, Dikele **mi-ēli** ("moonlight"), Dualla **mo-ādi** (pl. **mi-ādi** 4.), Isubu **mw-eri** ("moonbeam, moonlight"). Compare also Seŋlapi **kxueri** 9. (pl. **li-kxueri** or **kxueri** 10.) or **ngueri**, Sesuto **kh'ueli** 9. (pl. **li kh'ueli** 10.), Tekeza **uēte** 9., Angola o-**m-beshi** 9. "moon, month ;" Kafir i-**m-kwe-n-kwezi** 9 and 10. "star and stars ;" Kafir and Zulu i-**kwezi** 5. "morning-star ;" Zulu a-**ma-kwezi-kwezi** 6. "bright stripes." The original Kafir noun for "moon" (which may be presumed to have been I-**N-KWEZI** 9.) seems to have disappeared early, perhaps in consequence of the custom of "u **ku-ŋlonipa**" 15. (Ayliff's Vocabulary p. vi), and the corresponding Hottentot word for this venerated object may have been introduced into Kafir by the captured Hottentot women. (*Vide* § 472 note, and *Cape Monthly Magazine*, vol. 1. April 1857, p. 203.)

- nue*, Sindonga *u-m-nue*, Mpongwe *om-enlo*, Dualla and Isubu *mu-ne*) 3. "finger, toe," pl. *o-mi-nue* Sindonga (Kafir *i-mi-nue*, Tette *mi-nue*, Banyeniko *me-nue*, Batoka *mi-nue*, Bashubea *mi-nue*, Balojazi *mi-nye*, Maponda *me-nye*, Dikele *mi-na*, Dualla and Isubu *mi-ne*) 4.;
- o-mu-na* 3. "lip," pl. *o-mi-na* 4. (*o-mu-na* 1. = Zulu *u-mu-ato-ana* 1. "child," *vide* note at the end of this paragraph);
- o-mu-ho* 3. "bowstring," pl. *o-mi-ho* 4.;
- o-mu-rungu* 3. "face," pl. *o-mi-rungu* 4.;
- o-mu-tyira* (Kafir *u-m-sila*) 3. "tail," pl. *o-mi-tyira* 4.;
- e-yuva* (Sofala and Tette *zúva*, Sena *dzúwa*, Maravi *dzúwa*, Makua *in-zúwa*, Kikamba, Kisúheli, and Anjoane *dshua*, Kinika *tsua*, Batoka *le-zuva*, Banyeniko *li-ova*, Borotse *le-shoba*, Bayeiye *li-va*, Sindonga *e-tya*, Dikele *di-oba*) 5. "sun, day," pl. *o-ma-yuva* 6.;
- e-Suko* or *e-raho* (Kafir *i-ziko*) 5. "fireplace," pl. *o-ma-Suko* 6.;
- e-tetece* (Zulu *i-titihoya*) 5. "peewit," pl. *o-ma-tetece* 6.;
- e-vere* (Zulu *i-bele*) 5. "female breast," pl. *o-ma-vere* 6. (p. 164, note);
- e-uru* (Banyeniko and Borotse *li-olo*, Balojazi *li-yolo*, Maponda *le-olo*, Bashubea *i-tholo*, Sindonga *e-yulu*, Angola *ri-zúlo*) 5. "nose," pl. *o-ma-uru* 6.;

- o-mo-na* 18. "place where one is."

OMUKAƏ'ENDU, OVAKAƏ'ENDU, &c.

[Note to p. 203.]

The Otyihereró noun *o-mu-kaš'e-ndu* 1. is composed of the stem *-kaš'e** and the noun *o-mu-ndu* 1. "man, person, human being." The latter noun is met with in almost all South African Bântu languages; and, in fact, the name of this family of languages is the plural form of the identical Kafir noun *mu-ntu*. The terms *u-mu-ntu* and *a-ba-ntu*, and the corresponding words in the kindred languages, are frequently used in the restricted sense of indicating the black inhabitants only,—in contradistinction to the Europeans, Arabs, Hottentots, and Bushmen, to whom the word *a-ba-ntu* only applies in a wider sense. We may consider the most original forms of this noun to be those used in Zulu and Kafir (*u-mu-ntu* or *u-m-ntu* 1., pl. *a-ba-ntu* 2.), Sofala (pl. *va-ntu* 2.), Sena and Tette (*mú-ntu* or *mu-ntu* 1., pl. *va-ntu* or *va-ntu* 2.), Quellimane (*mu-ntu* 1., pl. *a-ntu* 2.), Maravi (*mu-ntu* 1., pl. *wa-nthu* 2.), Kisambala and Kipokómo (*mu-ntu* 1., pl. *wa-ntu* 2.), Batoka (*mo-ntu* 1.), Bashubea (*mo-ntu* 1.), Sindonga or Ovambo (*u-m-tu* 1., pl. *o-a-ntu* 2.), and Kongo (*o-mu-ntu* 1., pl. *o-a-ntu* 2.). The *nt* of the stem has become *nd* in Kikámbe (*mu-ndu* 1., pl. *a-ndu* 2.), Kihíáú (*mu-ndu* 1., pl. *wá-ndu* 2.), Anjoane (*mu-ndu* 1.), and Otyihereró (*o-mu-ndu* 1., pl. *o-va-ndu* 2.). The nasal of the *nt* has been lost (with or without subsequent aspiration of the *t*) in Setshuána (*mo-thu* 1., pl. *ba-thu* 2.), Inhambane (*mu-tu* 1.), Quellimane (*mú-ttu* 1., pl. *á-ttu* 2.), Kinika (*mu-tu* 1., pl. *a-tu* 2.), Snáheli (*m-tu* 1., pl. *wa-tu* 2.), Angola (*o-mu-tu* 1., pl. *o-a-tu* 2.), Benga (*mo-to* 1., pl. *ba-to* 2.), Dualla and Isubu (*mo-tu* 1., pl. *ba-tu* 2.). A palatalisation of the *t* has produced such forms as we find used in Dikele (*mu-tyi* 1., pl. *bo-tyi* 2.) and in Fernando Po (*bo-tshu* 1., pl. *bu-tshu* 2.). Finally the nasal of the stem (*n*) has prevailed over the *t* in Tekeza (*mu-no* or *mú-nu* 1., pl. *vá-nu* or *bá-nu* 2.), Barotse and Balójazi (*mo-nu* 1.), Banyenke and Baponda (*mo-no* 1.), and in the Nano language of Benguela (*o-mu-no* 1., pl. *o-ma-no* 2.). Vide §§ 140, 141, 412, 426. The diminutive which is formed from the stem *mu-ntu* (&c.) is subject to various and very strong contractions. Even in Zulu, the unabbreviated form *u-mu-ntw-ana* 1. "child, prince" (pl. *a-ba-ntw-ana* 2.) is chiefly used when speaking of royal children, and has thus become almost synonymous with the Spanish *infante* and *infanta*. When applied to common children, *u-mu-ntw-ana* is abbreviated to *u-m-twana* or *u-m-tana*, and even to *u-m-ta*. In the Mosambique

* Compare *o-m-gaš'e* 9. "female," and *o-kaš'e* 5. "tendency of a woman to produce none but female offspring,"—*o-rume* 5. indicating the tendency of bringing forth boys only.

Genus the same diminutive noun passes through various stages of abbreviation, such as *muana*, *mua*, &c., and in Lourenço Marques *wana* (Matonga *wuana*, Man/olosi *u-nuana*) 1. "child" appears to be contracted to *wa*. The Setshuana form of this noun is *nuana* 1. (pl. *b-ana* 2.), and in the Middle Branch languages it is generally *mu-ana* 1., as in Inhambane, Tette, Sena (pl. *w-ana* 2.), Makua, Cape Delgado, Batoka, and Kongo (pl. *ana* 2.),—or *m-ana* 1., as in Kipokómo, Kinika (pl. *ana* 2.), and Kisuheli (pl. *w-ana* 2.). Other variations of this noun in the Middle Branch are Sindonga *u-m-nona* 1., Angola *mo-na* 1. (pl. *a-na* 2.), and Mpongwe *o-nwana* 1. (pl. *a-nwana* 2.). The North-western Branch has *mw-ana* 1. in Benga and Isubu, *mi-ana* or *m-ana* 1. in Dikele, and *mu-na* in Duala,—with the plural form *b-ana* 2. in all these dialects. From the same stem, with an affix, is derived the Kiháu *m-ana-dše* 1. "child" (pl. *v-ana-dše* 2.), and also the identical Otyihereró noun *o-m-a-tye* 1. (pl. *o-v-ana-tye* 2.), whence the diminutive *o-ka-na-tye* 13. "little child," with which we may compare the Kikamba diminutive (without the affix) *k-ana* 13. "child" (pl. *tu-ana* 12.).

The stem *-kaš'e*, which occupies in the Otyihereró word *o-mu-kaš'e-ndu*, as well as in others, a position in the middle of the word, is in other languages frequently used as a suffix for the purpose of indicating the female sex. As such, it has in Kafir the form *-hazi*, in Sesuto *-h'ali* (*-gali*), in Sešlapi *-xari* (*-gari*), &c. Nouns of the 1st and 2nd classes are formed from this stem by the mere addition of the derivative prefixes of these classes, as Tette and Sena *mu-hazi* 1. (pl. *va-hazi* and *a-hazi* 2.), Bayeiye *mo-hazi* 1., Borotse *mo-kati* 1., Banyenka *mo-kathi* 1., Cape Delgado *mu-ka* 1., Kikamba *mu-ka* 1. (pl. *a-ka* 2.), Kipokómo *mu-ke* 1., Kisuheli *m-ke* 1. (pl. *a-ke* 2.), Kinika *mu-dše* 1. (pl. *a-dše* 2.), Setshuana *mo-xats'* 1., Kafir *u-m-ka* 1. (pl. *o-m-ka* 2.). This last may be a contracted form of *u-NEU-KAZI-ka*, or *u-m-fazi ka* (wife of-); for, the original *k* in this noun has been softened to *f* in the Kafir and Zulu pronunciation, and we thus have in these languages *u-m-fazi* 1. "woman" (pl. *a-ba-fazi* 2.; Zulu *i-si-faz-ana* 7. "collection of females, womankind"). The original *k* is still preserved in the Kafir diminutive *i-n-kaz-ana* 9. "young woman" (pl. *a-ma-n-kaz-ana* 6.; *i-si-n-kaz-ana* 7. "genitalia muliebria"). Still greater is the change in the Setshuana form *mo-sari* (Sesuto *mo-sali*) 1. "woman," pl. *ba-sari* (Sesuto *ba-sali*) 2. (*se-sari* 7. "womankind," *kxosi e-a se-sari* 9. "a female king," i.e. a queen; *tsari* 9. "female of animals"). The Tekeza forms *fati** and *-sate†*

* The Ma-n/olosi use the noun *fati* for the Kafir *u-m-fazi*.

† The suffix *-sate* seems to correspond in the dialects of the Matonga and Maxloenga to the Kafir suffix *-hazi* = Man/olosi *-kati*.

appear to connect the above Setshuâna nouns with the others, notwithstanding the great change of *k* to *s* which this identification presupposes. However, I cannot yet consider it as fully proved that the above Setshuâna forms are derived from the same root.

The compound noun for "woman" (which has in Otyihereró the form *o-mu-kaš'e-ndu*) occurs in most of the Western members of the South African Division of Bantu languages. In some of these languages the compound form only is met with, whilst in others we also find the more simple form, which is identical with Tette and Sena *mu-kâzi* 1. "wife, woman" (pl. *va-kazi* 2.). In almost all these languages the compound form is more or less strongly contracted, sometimes so greatly as to cause the middle portion of the noun (which corresponds to Otyihereró *-kaš'e*, = Kafir *-kazi*) to disappear; and in consequence of this contraction, the Dualla form for *o-mu-kaš'e-ndu* (which is *mu-tu* 1., pl. *b-i-tu* 2.) differs little in appearance from the Dualla noun *mo-tu* 1. (pl. *ba-tu* 2.), which is identical with Zulu *u-mu-ntu* 1. (pl. *a-ba-ntu* 2.). The following table exhibits the forms which correspond in the different Western languages to Otyihereró *o-mu-kaš'e-ndu* 1. (woman), *o-va-kaš'e-ndu* 2. (women), *o-mu-ndu* 1. (man, person), and *o-va-ndu* 2. (people), and to Tette *mu-kâzi* 1. (wife), and *va-kâzi* 2. (wives).

SINDONGA.

495. Sindonga, or the language of the *O-va-mbo* (2.),* differs but little from Otyihereró in the forms of the prefixes. In Sindonga the 10th prefix generally appears in a contracted form, in which it is identical with the 9th. Nouns of the 9th (n-) class, therefore, have for their plurals (of the 10th class) the same form as the singular. Plurals corresponding to singular nouns of the 13th (ka-) and 14th (u-) classes are not met with in the specimens of the Sindonga language in our possession. These are contained in a manuscript vocabulary, presented to the Grey Library by the Rev. C. H. HAHN. The following list of nouns taken from

* Mr. Palgrave informs me that there are between the Cunene river and the 18th degree of South Latitude about fourteen tribes, distinct from each other, although preserving to an unusual extent similar characteristics. Of these, five speak Sindonga, viz. the *O-va-mbo* of *O-m-donga*, the *O-va-kua-mbi* (Chief *Nayuma*), *O-va-kua-n-dshera* (late Chief *Tshipaka*), *O-va-nguaruiS'e* or *O-haruS'e* (Chief *Tshikongo*), and *Okorongas'e* (no Chief).

this vocabulary has been revised by Wm. Coates Palgrave Esq., whose emendations are distinguished by the letter "P." As we find that most of the nouns are given *with* the article, we have placed the few forms of the prefixes which occur without it in the same table.

SINDONGA NOUNS.

- ú-**m-tu** 1. "man, person," pl. **o-mu-S'ima** 3. "fountain," pl. **o-mi-S'ima** 4. ;
o-a-ntu 2. (p. 208) ;
u-m-ké-ntu 1. "woman" (p. 211) ;
u-mu-hungú 1. "married man," pl. **a-hungu** 2. ;
u-m-pika (Bayeiemo-via, § 486) 1. "servant," pl. **a-pika** (Angola **a-bika**) 2. ;
u-mu-máti or **u-máti** 1. "young unmarried man, youth, boy," pl. **a-máti** 2. ;
u-m-samáni 1. "old man ;"
u-m-nóna (Zulu **u-mu-ntwana**, p. 209) 1. "child ;"
u-m-haš'ona (Otyihereró **o-mu-haš'ona**) 1. "girl ;"
u-m-fúko (Otyihereró **o-mu-S'uko**) 1. "young woman ;"
u-m-kulú-ndu 1. "eldest brother" (compare Kafir **u-m-kulu-we**, Setshuána **mo-xolu** 1. "elder brother") ;
o-mu-S'iona (Otyihereró) "poor man ;"
u-m-lumbu (Kafir **u-m-lungu** ?) 1. "white man ;"
u-mburusháta 1. "a Portuguese," pl. **a-mburushata** 2. ;
u-m-rúš'i 1. "black man ;"
mu-ini (Otyihereró **o-mu-ini**) 1. "owner ;"
ú-mua 1. "king ;"
u-m-kaníloa 1. "king ;"
u-m-S'is'i 1. "God ;"
kalúnga 1. "God ;"
u-m-ti 3. "tree" (§ 428) ;
u-m-shila (Kafir **u-m-sila**, Tette **mu-shira**, Quellimane **mw-ira**, Kihiau **m-dshira**, Kipokómo **mu-dshita**, Kinfa **m-kira**, Suáheli **m-hta**, Otyihereró **o-mu-tyira**, Angola **mu-htla**) 3. "tail ;"
u-m-lilo (Otyihereró **o-mu-riro**, § 344) 3. "fire ;"
u-m-lúnga (Otyihereró **o-mu-rúnga**) 3. "palm-tree ;"
u-m-lúngu (Otyihereró **o-mu-rúngu**) 3. "face ;"
u-mu-éle or **o-mu-eš'e** (**u-m-ērē** P.) 3. "dagger, knife ;"
o-mu-xo, **o-mu-ho**, or **o-mu-sho** (Otyihereró **o-mu-ho**) 3. "calf of leg ;"
o-mu-énge 3. "sugar-cane ;"
u-m-ténya 3. "day ;"
ú-m-tsē (Benguela **u-tue**, Kikamba **mu-tue**, p. 185) 3. "head ;"
o-mu-S'imba (Kafir **u-m-zimba** "body") 3. "dead body ;"
u-m-S'iré (Kafir **u-m-tunzi**, Otyihereró **o-mu-S'ire**, p. 206) 3. "shadow ;"
u-m-lara 3. "bellows ;"
o-mu-tš'i 3. "grass ;"
u-m-tóko 3. and **ú-m-te** 3. "ashes ;"
ú-m-S'ia 3. "giraffe acacia ;"

- e-shendyo** 5. "tooth," pl. **o-ma-shendyo** 6. (Kafir i-zinyo 5., pl. **a-m-nyo** 6., § 326);
e-témo 5. "a pick," pl. **o-ma-témo** 6.;
é-yi (**e-we** P., Otyihereró **e-i**) 5. "egg," pl. **o-ma-yi** 6.;
e-kakara 5. "large eatable lizard," pl. **o-ma-kakara** 6.;
e-káxa (Nano **e-ka**, Otyihereró **e-ke**) 5. "hand" (also **o-shi-kaxa** 7.), pl. **o-ma-kaxa** (Nano **o-va-ka**) 6.;
e-hínga or **e-shínga** 5. "leopard," pl. **o-ma-hínga** or **o-ma-shínga** 6.;

THE NANO LANGUAGE.

496. The language of BENGUELA, of which NANO is one variety, is distinct from that of Angola as well as from the more Southern members of the Bunda Genus (Otyihereró and Sindonga). With regard to the forms of the prefixes, it is to be remarked that the *m* of the 4th prefix has not unfrequently become *v*; and also, that the same change has throughout affected the 6th prefix,—which has thus become identical in form with the 2nd (*va-*). Again, in one noun, at least, the *v* of the 2nd prefix has been converted (by the influence of a following nasal) into the labial nasal *m*. Thus the 2nd (*va-*) prefix has adopted in this one noun *o-ma-no* (Otyihereró *o-va-ndu* § 140) the form which the 6th prefix has relinquished in this language. With regard to the correspondence of the prefixes, we have to notice that the 6th (*va-*) and 10th (*s'o-*) prefixes correspond here as plurals to the 13th prefix (*ga-*)*,

* Regarding an apparent case of correspondence of the 10th prefix as plural to the 13th, in the Bayeiye language, *vide* § 486.

and the 8th (vi-) to the 14th (u-). But the vi- in this instance may be merely the softened form of the 4th prefix (mi-), which in Kinika (§ 482), and also in some languages of the North-western Branch (§ 504), corresponds as plural to the 14th (u-). The reason

15. o-gu-	

for this correspondence may be, that the form of the 14th prefix has been mistaken for the homophonous abbreviated form of the 3rd prefix mu- (to which the 4th forms the usual plural); but it may also be that this is an ancient manner of correspondence which has been retained here. The absence of the 12th prefix (TU-) from our list of Nano nouns is remarkable; —the 10th (s'o-) has apparently taken its place. But the incompleteness of our material allows of no certainty with regard to the non-existence of any class in the Nano language; nor am I even sure that I have assigned each noun to the right class. The specimens of the language given below were obtained by me from one of the *Va-kua-nano* or *Va-nano* (2.); but they agree in all essentials with the Nano words given by Mr. Rath in a manuscript of the Grey Library, also with the *Ba-rundu* (2.) and *O-tyi-vanda* (7.) vocabularies in Hahn's "Grammatik des Hereró," and with the *Pañgela* words in Koelle's "Polyglotta Africana."

(Otyihereró *o-vi-ta* = Sindonga *i-1-ta* 8. "enmity, commando, war;" Zulu *i-si-ta* 7. "enemy" pl. *i-zi-ta* 8., *u-bu-ta* 14. "enmity");
u-teke (§ 453, note) 14. "night," pl. *o-vi-teke* 8.;
o-gu-lila (Kafir *u-ku-lila*, Otyihereró *o-ku-rira*) 15. "weeping;"
o-gu-lima (Kafir *u-ku-lima*) 15. "to plough, dig."

THE ANGOLA LANGUAGE.

497. The old Angola language* has, upon the whole, retained older forms of the prefixes than the other Bunda tongues, although only fifteen of the classes of nouns have been found here. The double forms of the prefixes of the 10th (*shin-*) class are remarkable. In these we find forms with the vowel *i*, and also with the vowel *o*. In the 5th (*ri-*) class we find the form *o-ri-* instead of the contracted *e-* of the other Bunda languages. (Vide § 491, and first note on p. 222.) The fact of the correspondence of the 12th (*tu-*) prefix to the 13th (*ka-*), and not, as in the other Bunda tongues, to the 11th (*lu-*), has already been remarked. (§ 453.) The 14th prefix (which in Otyihereró corresponds as plural to the 13th) is in Angola of the singular number only. The 15th (*ku-*) class in Angola appears only to include infinitives, and has, therefore, no plural corresponding to it.

*The *Ku-amba ku-a Ngola* 15. is represented by the Jesuit Catechism (1643, 1661, 1784, 1855), and by Dias' Grammar ("Arte," 1697).

ki-kalakalo 7. "work," pl. **i-kalakalo** 8. (**o-ku-kala-kala** 15. "to work," from **o-ku-kála** 15. "to be," § 208) ;

* I had first believed the *e* in this form *éulu* to be a contraction of the 5th prefix, with or without the article,—like the **e-** which occurs in Otyihereró, Sindonga, and Nano. (§ 491.) But it is now clear to me that the *e* of *éulu* belongs to the stem of the noun, and corresponds to the Otyihereró *y-*. And, as far as our examples go, the existence of **e-** as a form of the 5th prefix in Angola is not proved.

† The forms *nshina*, *nbata*, and *nbuba* have as yet been found only in Dias' "Arte." They may either be misprints for **ri-shina**, **ri-bata**, and **ri-buba**, or the *n* in them may be the first consonant of the stem, before which the derivative prefix has fallen away. It is, at all events, unlikely that the 5th prefix in Angola should (as in Makua) have adopted a nasal form.

- ki-tushi** 7. "debt," pl. **i-tushi** 8.; **tulo** 9. "breast," pl. **shi-tulo** 10.;

meal," pl. **shi-fuba** 10.; **aŋga** 6.;
haŋga 9. "partridge," pl. **shi-ku-zola** 15. "to love."
haŋga 10.;

ee. *The Kongo Genus.*

498. The Kongo Genus is represented by two languages, which exhibit remarkable differences from each other by reason of the widely removed stages of development in which they appear. The old Kongo language, as spoken in that empire two hundred years ago, shews the prefixes in forms almost equally full with those generally possessed by the other Middle Branch languages; while Mpongwe, modernised probably not only by time, but situation and other circumstances, has abbreviated most of the forms of the prefixes, usually retaining only their vowels. Hence, in Mpongwe, several originally distinct prefixes and forms of concord having become homophonous, some of the classes of nouns have coalesced, and one, at least, seems to have disappeared. It is certain that the old Kongo language possesses fifteen of the sixteen classes of nouns generally inherited by the Middle Branch; but Mpongwe appears to have reduced this number to ten, chiefly by processes of amalgamation. As article in Kongo, we only meet with the demonstrative particle *o-* with its euphonic modifications; whilst in Mpongwe we find initial vowels, which (like the Kafir articles, § 464) appear to have been

pronouns, originally identical in form with the derivative prefixes themselves. In one case, (that of a noun of the 6th class) it appears as if the article derived from the pronoun were also met within Kongo; but as this noun (*a-ma-ko*) occurs only once, it is doubtful whether it may not be a misprint for *o-ma-ko*.

THE KONGO LANGUAGE.

499. The Kongolan-
 language shares with the
 members of the Bunda
 Genus the use of the
 prefixed *o-* as a sort
 of article; but in
 Kongo this *o-* is always
 changed into an *e-* be-
 fore prefixes which con-
 tain the vowel *i*, such
 as the 4th (*mi-*), 5th
 (*ri-*), 7th (*ki-*), 8th
 (*i-*), and 10th (*zin-*),
 —also when preceding
 a prefix in which *i* was
 the vowel, although
 now suppressed, such
 as the 9th (*n-*). But
 before prefixes con-
 taining the vowels *u*,
o, or *a*, the article
o- remains unaltered.
 With regard to the
 prefixes, it is to be

remarked that, excepting the disappearance of the labial explosive consonant in the 2nd (BA-), 8th (PI-), and 14th (BU-) prefixes, their forms are as original as those to be met with in any of the other Middle Branch languages. That the 6th (ma-) prefix corresponds here, in some cases, as plural to the first (mu-), appears to be an ancient feature of the language; for, it also occurs in Kafir (§ 451), Sesuto, Sena, and perhaps in Kikamba. Those of the nouns of the 5th (ri-) and 9th (n-) classes which indicate persons are frequently treated as if of the 1st (mu-) class, and in this case they adopt the 2nd (a-) prefix as their plural. (§ 466.) The forms with the article are, as far as they can be ascertained, placed by the side of those without it.

KONGO NOUNS.

- o-mu-ntu** 1. "man, person," pl. **o-a-ntu** 2. "people" (p. 208);
mu-tinu or **m-tinu** 1. "king;"
o-mu-bhiga (Bayeiye **mo-via**, § 486) 1. "servant;"
mu-ana 1. "son, child, descendant, nephew," pl. **ana** 2. (p. 209);
o-mu-leke 1. "boy," pl. **o-a-leke** 2.;

- ku-nunkua** (Kafir **u-ku-nukwa**) "prophecy, the being smelt out;"
- ku-bhinga** 15. "service."

THE MPONGWE LANGUAGE.

500. In their present form, the derivative prefixes of the nouns in the Mpongwe language consist of a vowel, which is rarely preceded, although sometimes followed, by a

consonant. These vowels seem to have been articles, rather than original derivative prefixes. The derivative prefixes themselves appear to have been so contracted with their articles that they have either wholly disappeared, or retained their consonant only. It can hardly be supposed that the initial vowels of the Mpongwe prefixes can have descended from the article *o-* which we find in the Kongo language; for, in that case this *o-* must have entirely assimilated itself to the vowel of each prefix in Mpongwe,—changing into an *a* before prefixes containing this vowel (such as the 6th), &c. It is far more probable that we meet here with remnants of the old Bantu article derived from pronominal elements originally identical with the prefixes,—that article which we find also in Kafir, &c. (§ 464.) As a third explanation, we would suggest that forms of the prefixes such as **am-** (6.) and **ow-** (14.) may have been mere transpositions of **MA-** and **WO-**; but, however this may be, the present forms have now no trace of the meaning of an article in themselves, and have practically to be looked upon entirely in the light of derivative prefixes; and have, therefore, been noted as such.

501. By this mutilation of the forms of the prefixes, those of the 11th, 14th, and 15th classes have become identical with that of the 3rd (*o-*) class; and as the other forms of concord of these classes appear also to have assimilated, we can now only discern by the different plural prefixes that a noun belonged originally to the 11th, 14th, or 15th class,—instead of to the 3rd (*o-*) class. Thus in Mpongwe the 11th, 14th, and 15th classes appear to have been incorporated into the 3rd (*o-*) class, and to have practically ceased to exist. It is, therefore only for purposes of comparison that we have assigned to them separate places here. It is remarkable that whilst the *k* of the 7th class has become *z* (and not *s*, as in the corresponding Kafir prefix), the 10th prefix has a form **sin-** corresponding to the Kafir **zin-**; so that *s* and *z* seem

to have reversed their respective positions in these two languages. (§ 385.) The strengthened form of the initial consonant of the stem (indicated by the mark ·) occurs in Mpongwe after the prefixes of the 9th (n-) and 10th (sin-) classes, and also after that of the 6th (am-) class, when the latter is placed in its full form before a labial fricative. (§§ 360 & 361.) The formation of abstract nouns of the 10th (sin-) class in this language also deserves notice.

C. IN THE NORTH-WESTERN BRANCH.

502. The derivative prefixes of the nouns in the languages of the North-western Branch exhibit a strong preference for the letter *b*. This is shown, not only as in Kafir and Setshuāna, by the retention of the letter in those prefixes which originally possessed it,* but also by a tendency to convert other labials into this media. In the languages of the North-western Branch generally, the consonant of the 8th prefix (PI-) has been thus transformed. But in one of these languages (that of Fernando Po), the labial nasal of the prefixes of the 1st (MU-), 3rd (MU-), 4th (MI-), and 6th (MA-) classes has also been changed into the labial media *b*. On the other hand, the letter *k* is no longer met with in the prefixes of the nouns which are used in these languages. It has either been entirely dropped, or it appears in the form of some other letter,—for instance, as *dsh* in the 13th Dikele prefix,

* *Viz.* the 2nd (**ba-**) and 14th (**bu-**).

s in the 7th Fernandian prefix, and *v* in the same 7th prefix in Benga and Dikele.

503. The recognition of the 7th and 13th prefixes in these languages was difficult, especially as here the 7th prefix has generally the 12th, and the 13th the 8th, as corresponding plural; whilst in all other known South African Bantu languages the 8th prefix always forms the plural of the 7th, and the 12th (in those languages which possess it) is plural to the 11th or 13th. Nor are the forms in which these prefixes more usually occur, such as to render their identification an easy task. The singular prefix *e-* or *y-*, to which, in most of these languages, the 8th (*be-*) prefix corresponds as plural, would naturally suggest an identification with the 7th prefix (as usually found in correspondence with the 8th), especially as we have seen in Mpongwe that the form of the 7th prefix has dwindled to *e-*. However, the very same nouns which in the other languages of the North-western Branch possess this *e-* prefix, begin, in Dikele, with *a-*, which can but be identified with the 13th (*KA-*) prefix of the Middle Branch languages. Therefore the *e-* of the other languages of the North-western Branch is evidently to be ascribed to a darkening of the vowel of the 13th prefix. On the other hand, I was long doubtful as to which class to assign a prefix which generally corresponds as singular to the 12th (*lo-*). The form of this prefix is *i-* in Isubu and Dualla, *i-* and *vi-* in Benga, and *vi-* in Dikele. However, the Fernandian form of this prefix (which is *si-* or *s-*) renders it probable that the 7th prefix is to be discovered here. This 7th prefix (in Fernandian certainly, and probably also in some other languages of the North-western Branch) possesses the power of forming diminutives,—a feature which we also occasionally meet with among the other South African Bantu languages. (§ 430.)

504. The various correspondences of the singular and plural prefixes in the languages of the North-western

Branch (which languages, in this respect, differ from each other, as well as from those of the Middle and South-eastern Branches) seem to shew that the original range of correspondence of many of the plural prefixes was a far wider one than would have been concluded from a comparison of the more Southern Bantu languages only. Yet, even in the latter, we meet with occasional traces of some unusual methods of correspondence which are only found to occur with regularity in the North-western Branch. Thus, in Kisambala (§ 484) we find the 8th (vi-) prefix corresponding as plural to the 13th (ka-), just as it does in the languages of the North-western Branch,—and it appears hardly probable now, that this can be referred (as I formerly suggested) to a confusion of the 13th (ka-) prefix with the 7th (ki-). Similarly, in the languages of the North-western Branch,* the frequent occurrence of the 4th (mi-) prefix as plural to the 14th (bo-) renders it highly probable that the similar case in Kinika is to be explained as a remnant of an old mode of correspondence which has become obsolete in the other known members of the Middle Branch.

505. As to the forms of the prefixes, besides the preference for the *b*, and the avoidance of the *k* sound, the prefixes of the North-western Branch generally retain the labial nasal *m*, excepting in the case of the Fernandian language. In the 5th prefix, instead of *l* or *r*, we usually find the dental media *d*. On the other hand, the dental tenuis of the 12th prefix (TU-) has been converted into the liquid *l* in all the North-western Branch languages, excepting the Fernandian; and the same liquid has also been retained as the consonant of the 11th prefix.

506. We have admitted that some of the correspondences between singular and plural prefixes which are peculiar to the North-western Branch, or only shared by

* In Benga, Dualla, and Isubu.

one or two other Bantu languages, are probably not innovations,—but retentions from a former period, when, as yet, many of the plural prefixes had not regularly attached themselves to certain singular forms. We also, on one or more occasions, meet with a prefixal form which appears to be more original than those found in the other two Branches of the Bantu languages. But all the peculiarities which are distinctive of the North-western Branch do not admit of this explanation. The forms of some of the prefixes have been so strongly contracted as almost to defy identification. Thus prefixes may have been confounded with each other, and correspondences differing from the original ones may have arisen through the force of analogy. At the same time, the concord appears to be frequently employed in the North-western languages rather as an alliterative process, than in its original grammatical sense, or as a division of the nouns into classes. The incompleteness of our materials for a knowledge of these languages renders it probable that the rules based upon them will have to be altered or modified in some of their details.

DIKELE.

507. *Di-kěle* 5. is spoken by the *Ba-kěle* 2., sing. *N-kělē* (*Mpongwe O-kělē*) 1. In this language, as in Kafir, the forms of the 1st and 3rd prefixes are usually contracted to a mere consonant. Dikele, however, proceeds a step farther than Kafir, and adapts this *m-* to the nature of the initial consonant of the stem. Thus the *m-* frequently becomes an *n-*, or in some cases falls off entirely. The most usual forms of the 1st and 3rd prefixes are, therefore, identical with those of the 9th, and these three classes are frequently only to be distinguished by means of the forms of concord which refer to them. Many nouns which indicate animals, parts of the body, &c., have evidently been transferred from the 9th (or some other) class to the 1st, and now have plurals of the 2nd (*ba-*) class. In cases where the vowel of the 1st and 3rd classes is retained,

the *u* sound is usually converted into *i*, which renders these prefixes homophonous with the 4th (*mi*-). In one instance (*gwana* 3. "mouth") it almost seems as if the 3rd prefix had in Dikele the unusual form *gw*-, but a comparison of Mpongwe shews that the *gw* here is part of the stem, although it falls off before the plural prefix *mi*-. It is remarkable that the vowel *u* of the 11th and 12th prefixes has been changed into *a* in Dikele. This renders it a little doubtful whether the prefix *a*- or *dsh*- is really identical with the *ka*- of the Middle Branch, and to be assigned to the 13th class. It is possible that the letter *a*, as given by the missionaries, may be more of an indistinct short sound, derived from any other original vowel. Very curious, if true, is the case of a noun which beginning with *m*- in the singular, is said to belong to the 6th class, and forms its plural with the 4th prefix *mi*-. The *i* of the 5th (*di*-) prefix is retained in Dikele before *a*, *â*, *o*, and *e*,—but is suppressed before *i* and *u*; whilst the *a* of the 6th prefix (*ma*-) always disappears when the stem before which it is placed begins with a vowel.

- bi-shikwě** 14. "back-yard," pl. **ma-bi-shikwě** 6.;
- b-uli** 14. "cavern," pl. **m-uli** 6.

THE BENGAL LANGUAGE.

508. The Benga language, spoken on the islands of Corisco Bay, belongs to a different species from Dikele. In our limited specimens of Benga, no trace of the 11th

* This noun evidently belongs to the same stem as **ǎ-ishǎ** (= Kafir **i-li-so**) 5. "eye." (Vide p. 236 and § 327.) The plural forms **mi-o-ho** and **mi-o-so** 4. in Benga and Dualla are very suggestive, when compared with the Kisuáheli plural **ni-u-ssó** 10.

class of nouns has, as yet, been discovered. The 10th (n-) class appears to be in regular correspondence with the 9th (n-). The Benga language agrees with Dualla in using the prefix of the 4th class (mi-) as plural to the 14th (bo-). One noun of the 14th class is, however, irregular, and appears to possess a plural of the 10th (n-) class. It is remarkable that the prefix (mw-) of the 3rd

class frequently loses its consonant, and that the vowel u- then represents in Benga the same 3rd prefix which we often find in Dikele converted into an n-. The 5th (di-) and 7th (vi-) prefixes frequently lose their consonants, and become, in this shorter form, apparently homophonous. This may sometimes have occasioned the transference of nouns from one of these two classes to the other.

lohi 4. (Mpongwe **o-lasha** 3.,
 Dikele **di-liasa** 5.);
bu-wha 14. "day," pl. **whi** 10.
 (Isubu and Dualla **bu-nya** 14.,
 pl. **mi-nya** 4.).

DUALLA AND ISUBU.

509. In Dualla and Isubu we perceive an irregular correspondence of the 2nd (**ba-**) prefix, which we occasionally find here as plural to the 3rd (**mo-**); and in each language, in one case at least, the 4th prefix (**mi-**) corresponds as plural to the 1st (**mo-**). It is probable that these irregularities are in some way connected with the existence in these dialects of personal nouns of the 3rd and 4th classes. It is clearly shewn by

the few Kafir nouns of persons which belong to the 3rd (m-) and to the 4th (mi-) class that it is natural for such nouns to be either partly or wholly treated as if they belonged to one of the two personal classes. (*Vide* p. 160, note.) The contest between grammatical and logical gender, between ancient usage and modern analogy, continually produces similar apparent irregularities.

510. It is a second peculiarity of these dialects that in them the 12th (lo-) prefix corresponds, in a few cases, as plural to the 5th (di-). The 5th prefix in the Bantu languages almost universally has the 6th as its corresponding plural; the only exception besides the present being that of one personal noun in Kongo, which belongs to the 5th (rī-) class, but forms its plural with the 2nd prefix (a-). As the 5th prefix in Dualla and Isubu is, when abbreviated, homophonous with the usual form of the 7th i- (to which here the 12th prefix generally corresponds), it may be that this circumstance has led, by error or analogy, to the above-mentioned exceptional correspondence. The 9th (n-) class in these dialects has not only the 10th (n-), but also the 6th (ma-), and 2nd (ba-), as corresponding plurals. The respective prefix of each of the two latter classes is placed before the form with the 9th (n-) prefix. We notice in Dualla, as in Benga, that the 4th (mi-) prefix corresponds as plural to the 14th; whilst in Isubu (as well as Dikele and Fernandian) the 14th class more usually forms its plural with the 6th prefix. A few Isubu nouns of the 14th (bo-) class have, however, plurals of the 4th.

511. The DUALLA (or Cameroons) language differs but slightly from Isubu. In a few Dualla words we find the palatalised form (dsh-) of the 5th (di-) prefix. The 11th (l-) class appears to be distinct from the 5th. The 7th prefix (i-), in a few nouns at least, has the 8th (bi-) as its corresponding plural, although the 12th (lo-) is the usual plural in Dualla. Of this

partial agreement with the general rule of correspondence of the 7th and 8th classes in the Bantu languages, Dualla and Fernandian afford, as far as we know, the only instances among the languages of the North-western Branch.

n-denge 9. "suffering, distress;" **kalati** (Isibu) 9. "book," pl. **kalati** (Isibu) 10.;
kunga (Isibu **koŋga** or **kuŋga**) 9. "boat;"
l-oko (Isibu) 11. "game, play, sport," pl. **m-oko** (Isibu) 6.;
l-ongo (Isibu **l-ongo**) 11. "a part, portion, share," pl. **m-ongo** (Isibu **m-ongo**) 6.;
l-ambu (Isibu) 11. "thing," pl. **m-ambu** 6.;
e-puma Isibu (Dikele **a-buma**) 13. "fruit," pl. **be-puma** (Isibu) 8.;
e-kotu (Isibu **e-koto**) 13. "cap," pl. **bo-kotu** (Isibu **be-koto**) 8.;
e-botu (Dikele **a-shali**) 13. "work," pl. **be-botu** 8.;
e-idi or **e-ili** (Isibu **e-eli**) "bush, thick shrub," Dikele **dsh-eli** "tree," § 507) 13. "forest, wilderness," pl. **be-idi** (Isibu **be-eli**) 8.;
e-yala 13. "word," pl. **be-yala** 8.;
bu-nya (Isibu) 14. "day," pl. **mi-nya** (Isibu) 4.;
bo-eli (Isibu **bw-eli**) 14. "tree," pl. **mi-eli** 4. (Zulu u-**mu-ti** 3., pl. i-**mi-ti** 4., § 428 note; Dikele **dsh-eli** 13. pl. **bi-eli** 8., § 507);
bo-ambu (Isibu) 13. "language," pl. **mi-ambu** 4.;
bo-anga 14. "breast," pl. **mi-anga** 4.;
bo-so Isibu (Benga **bo-ho**, Dikele **bo-shē**, § 507) 14 "face," pl. **mi-o-so** (Benga **mi-o-ho**) 4.;
b-olo (Isibu **b-olo**, Benga **bw-alu**, Dikele **bi-ali**, § 507) 14. "canoe," pl. **mi-olo** (Benga **mi-alu**) 4.

512. The characteristics which distinguish ISUBU from its variety, Dualla, are few. Among the North-western Branch languages, Isibu alone has retained the ancient feature of a local class (o-), which is probably to be identified with the 16th (PA-) class. (§ 435.) The 11th (l-) class, on the contrary, can hardly (if at all) be distinguished in its concord from the 5th (di-). Although the prefix of this latter class occasionally dwindles to **y-**, it has never been palatalised in Isibu, as it has in Dualla. On the contrary, the prefix **dsh-** in Isibu belongs to the 7th (i-) class, being derived from an ancient *k*. (*Vide* § 502.) To the Isibu nouns given in the Dualla list, we add the following.

ISIBU PREFIXES.

o-ma 16. (or 15.) "place."

FERNANDIAN.

513. The striking peculiarity of the Fernandian derivative prefixes of nouns is the change of the labial nasal (*m*) into the labial media (*b*). By this, the 1st and 3rd prefixes have become homophonous with the 14th (**bo-**), the 6th prefix with the 2nd (**ba-**), and the 4th with the 8th (**bi-**). The number of the prefixes has thus been practically reduced to eleven; but it has been deemed better, for the purpose of comparison, to separate in the table of the prefixes those classes which have now virtually coalesced, *viz.* the 2nd and 6th (**ba-**), the 3rd and 14th (**bo-**), and the 4th and 8th (**bi-**). This change of *m* into *b* does not, however, appear to take place in all the dialects spoken on the island of Fernando Po. At least, the usual forms of the numerals in the Southern part of the island abound in the letter *m*, where those employed in other parts of the island have a *b*. (J. Clarke's *Introduction to the Fernandian Tongue*, 1848, pp. 22 and 23.) The nouns given in the appended list probably belong to dialects spoken near Clarence, in the North of the island. An analogy to the general change of the *m* into *b* in Fernandian, is met with in the Nano language, in which the *m* of the 6th prefix is always changed into *v*, whilst the *m* of the other prefixes is in some cases retained, but in others also converted into *v*, or, before *u*, falls off entirely. Thus in Nano, the 6th prefix cannot be distinguished from the 2nd (**va-**), and the 4th has, besides its own ancient form (**mi-**), a softened one (**vi-**) which is homophonous with that of the 8th prefix. The 1st and 3rd classes in Nano also possess, in addition to the regular form of their prefix (**mu-**), a second form (**u-**), which is identical with the 14th prefix in Nano. (§ 496.) In Fernandian, also, the 1st and 3rd prefixes (**bo-**) occasionally lose their consonant entirely.

514. Another characteristic of the Fernandian language is the form of the 7th prefix (**si-**), in which, curiously enough, Fernandian agrees with Kafir, although the

diminutive meaning which the 7th prefix possesses in Fernandian is not to be met with in this prefix in Kafir. In Kongo, however, the same 7th prefix (*ki-*) appears to possess some sort of diminutive force. (§ 430.) Fernandian is also distinguished from the other languages of the North-western Branch by the retention of the original consonant (*t*) of the 12th prefix, which consonant, in this Branch, has been generally converted into *l*. The *l* of the 11th prefix has also been retained in Fernandian; the *r* in *r-oto* "bag" belonging probably to the 5th (*di-*) class, as the 6th (*ba-*) class (to which *b-oto* "bags" belongs) has not yet been met with in any other Fernandian noun in plural correspondence with the 11th (*lo-*) class. A case in which the 8th (*bi-*) prefix occurs as plural to the 5th (*di-*) is unique in its kind and exceedingly doubtful. In fact, we dare not draw any stringent conclusion from the insufficient materials which have as yet been published in the Fernandian tongue. Full as they are of misprints and inconsistencies, they are still valuable in furnishing us with a certain kind of knowledge of a language which, in some ways, has been very peculiarly shaped.

**FERNANDIAN

e-buta 13. "hat," pl. **1-buta** 8.;
bo-ti or **bu-ti** (Isibu **bw-eli**, Dualla **bo-eli**, p. 244) 14. "tree," pl. **ba-ti** (Isibu **ma-ti**) 6.

C. REVIEW OF THE DERIVATIVE PREFIXES OF THE NOUNS.

515. Having thus gone through the known South African Bantu languages, and shown the different systems of correspondence between the concord-indicating derivative prefixes of the nouns, which obtain in each,—we can now pass these prefixes in review. Of each prefix it will be stated in what languages it occurs, in what forms it appears, and what is (as far as these can be ascertained) its etymology, force, and meaning; also to what other class or classes the class indicated by it corresponds either as singular or plural. We shall thus furnish a kind of descriptive catalogue of the different South African Bantu Prefixes of the nouns, giving, as it were, a *resumé* of their Natural History. We shall see the general constancy in the form of each prefix, with many minor phonetic variations, and also how far the different languages agree or vary in their modes of replacing each singular prefix by a corresponding plural one.

1. FIRST PREFIX: **MŨ-**.

516. The first prefix (**MŨ-**) is common to all South African Bantu languages.

FORMS OF THE FIRST (**MŪ-**) PREFIX.

SOUTH-EASTERN BRANCH.	KAFIR.	_____ } m- { _____			(—)	
	ZULU.	} mu- {	_____			
	SEŪLAPI.		_____ } mo-, m- (MO-B-) {

	BENGA.	mw- {		m- {		
	DUALLA.	mu- {				
	ISUBU.	mw- {				
	FERNANDIAN.	bu-, bw-, bo-, mo-, o-, (—)				

* **KI-sambala** (Dr. Steere's letter, § 484) or **KI-sambara** (Dr. Krapf 7. is called by the Swaheli **Mia-neno** *y-a KI-sambaa* 6.; and by the people themselves (the **Waa-shambala** 2., sing. **M-shambala** 1.) **M-buli** *z-a KI-shambala* 10. Vide Dr. Steere's "Collections for a Hand-book of the Shambala Language, Zanzibar 1867," which I have received while this page is going through the press. The following tables of the forms of the prefixes will receive a few slight additions from this book.

FORMS. **mu-** in all these languages, *excepting* Kafir, Sesuto, Bayeiye, Mpongwe, Benga, Isubu, and Fernandian. N.B. Marked as short (**mũ-**) in Tette and Angola.

mw- in *Benga* and *Isubu* before vowels.

mo- regularly in *Setshuâna* (Seǃlapi and Sesuto), *Benga*, *Dualla*, and *Isubu*; occasionally in *Tette* and *Angola* (besides the more usual form **mũ-**), and in at least one noun in *Fernandian*. N.B. Marked as long (**mō-**) in Seǃlapi. The form **mo-** met with in Bayeiye and Balojazi, according to Livingstone's Vocabulary, may be due to *Setshuâna* orthography.

mi- frequently in *Dikele*.

m- the only form met with in the *Kafir* language, and occurring, with other forms, in *Zulu*, *Makua*, *Kihiau*, *Kikamba*, *Kinika*, *Suǃheli*, *Kisambala*, *Otyihereró*, *Sindonga*, *Kongo*, *Dikele*, *Benga*, *Dualla*, and *Isubu*. N.B. *Setshuâna* **m-** = **MO-B-**.

om- in *Mpongwe*.

n- in *Dikele*. N.B. Tekeza **n-** = **MU-L-**.

bu-, **bw-**, **bo-** in *Fernandian*.

u- in *Nano* and *Kongo*.

o- in *Mpongwe* and *Fernandian*.

(—) The prefix is probably omitted in all the known South African *Bantu* languages,—although instances of such omission have not as yet been proved in *Makua*, *Bayeiye*, *Mpongwe*, *Dualla*, and *Isubu*.

RANGE OF MEANING. This prefix indicates persons in the singular number, and is sometimes (particularly in the Middle and North-western Branch languages) extended to animals. Other things, when treated as persons, may also belong to this class.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 2nd (**BA-**) class throughout the *Bantu* languages. N.B. When the prefix of the 2nd class has the form **bo-** in the *Kafir* and *Setshuâna* dialects, it either corresponds to a singular of the 1st class in which the prefix has been omitted, or **bo-** is prefixed to the form with **mo-**,—thus, **bo-mo-**.

„ „ 6th (**MA-**) class in some especial cases in *Kafir*, *Zulu*, *Sesuto* *Sena*, (perhaps *Kikamba*), and *Kongo*.

„ „ 10th (**TIN-**) class in a few nouns in *Angola*, transferred from the 9th (**N-**) class.

„ „ 4th (**MI-**) class in one noun in *Dualla* and another in *Isubu*, which have probably been transferred from the 3rd (**MU-**) class.

2. SECOND PREFIX: **BA-**.

517. The second prefix (**BA-**) is common to all South African *Bantu* languages.

FORMS OF THE SECOND (**BA-**) PREFIX.

SOUTH-EASTERN BR.	KAFIR SPECIES.	} ba- b- } be- } bo-
	SE ⁵ LAPI.	
	SESUTO.	
	TEKEZA.

NORTH-WESTERN BRANCH.	DIKELE.	} ba- b- }
	BENGA.	
	DUALLA.	
	ISUBU.	
	FERNANDIAN.	

The following are among the Nouns of the First (**MU-**) and Second (**BA-**) Classes in the Original *Bantu* Language:
MU-NTU 1. "person, human being," pl. **BA-NTU** 2. (p. 208, §§ 140, 141, 412, and 426);
MU-KATHI 1. "wife, woman," pl. **BA-KATHI** 2. (pp. 208—211);
MU-NTU-ANA 1. "child," pl. **BA-NTU-ANA** 2. (pp. 208 and 209).

Review of the Second Derivative Prefix of Nouns. 255

FORMS. **ba-** in the *North-western Branch* languages, and in the *Kafir* and *Setshuâna* dialects. N.B. The **ba-** in Bayeye may be due to Setshuâna orthography.

be- in a few cases, in *Kafir*, *Zulu*, *Seǀlapi*, and *Fernandian*.

bu- and **bi-** doubtful in *Fernandian*.

b- (before vowel stems) in the *North-western Branch* languages, and also in the *Kafir* and *Setshuâna* dialects.

va- regularly in *Tekeza*, *Otyihereró*, and *Nano*.

v- (before vowels) in *Otyihereró*.

va- or **wa-** in *Tette*, *Sena*, and *Kihiau*.

wa- in *Suaheli* and *Kisambala*.

w- (before vowels) in *Suaheli*.

ma-, by assimilation, in one case in *Nano*.

a- (the only form of the prefix) in *Makua*, *Kikamba*, *Kiniha*, *Sindonga*, *Angola*, and the *Kongo* Genus (*Kongo* and *Mpongwe*),—and (with other forms) in *Tette* and *Sena*.

bo- (a mere phonetic modification of **ba-**) in one *Dikele* noun.

bo- (probably = **BA-MU-**) in the *Kafir* and *Setshuâna* dialects, with certain classes of nouns.

o- in *Otyihereró* = *Kafir* and *Setshuâna bo-*.

(—) The prefix omitted in the *Zangian* and *Kongo* Genera.

ETYMOLOGY. *Vide* § 443.

RANGE OF MEANING. Restricted to personal nouns in the plural, —the meaning chiefly defined by the correspondence of this class to the first.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS PLURAL TO THE 1st (**MU-**) class in all South African *Bantu* languages.

N.B. In the form **bo-** or **bo-mo-** (= **BA-MU-**) in certain cases in the *Kafir* and *Setshuâna* dialects. (*Vide* p. 253.)

„ „ 9th (**N-**) class in a few personal nouns (which can also be transferred to the 1st class) in *Kongo*, *Dualla*, and *Isubu*.

N.B. In these cases the 2nd prefix is prefixed to the 9th, as **ba-n-**, **a-n-**, &c.

„ „ 5th (**DI-**) class in one noun in *Kongo*.

„ „ 3rd (**MU-**) class in a few *Dualla* and *Isubu* nouns which indicate persons.

3. THIRD PREFIX: **MŪ-**.

518. The third prefix (**MŪ-**) is common to all South African *Bantu* languages.

FORMS OF THE THIRD (**MU**-) PREFIX.

SOUTH-EASTERN BRANCH.	KAFIR.	} mu-	} m-	} (—)			
	ZULU.

Original Bantu Nouns of the Third (**MU**-) and Fourth (**MI**-) Classes.**MU**-TI 3. "tree, plant," pl. **MI**-TI 4. (§§ 428, 519 note);**MU**-TIMA 3. "heart," pl. **MI**-TIMA 4. (p. 204);**MU**-NUE 3. "finger," pl. **MI**-NUE 4. (pp. 204 and 205);**MU**-LUM-(B)O 3. "mouth, lip," pl. **MI**-LUM-(B)O 4. (§ 439 note, pp. 238 and 243).

Review of the Third Derivative Prefix of Nouns. 257

FORMS. **mu-** in all these languages, *excepting* Kafir, Sesuto, Mpongwe, Dikele, Benga, and Fernandian. N.B. The only form met with in Tette, Sena, Otyihereró, and Angola; in Tette and Angola noted as long (**mū-**).

mw- in *Benga* and *Isubu* before vowels.

mo- regularly in *Setshuâna* (Seǃlapi and Sesuto), *Dualla*, and *Isubu*. N.B. The vowel noted as long in Seǃlapi (**mō-**). The **mo-** in Bayeiye may be due to Setshuâna orthography.

mi- occasionally in *Dikele*.

m- the only form met with in the *Kafir* language,—with other forms in *Zulu*, *Tekeza*, *Makua*, *Kihiau*, *Kihamba*, *Kiniha*, *Suaheli*, *Kisambala*, *Bayeiye*, *Sindonga*, *Kongo*, *Dikele*, *Benga*, *Dualla*, and *Isubu*. N.B. Setshuâna **m** = **MO-B**.

(o)**m-** in *Seǃlapi* and *Bayeiye*.

om- in *Mpongwe*.

n- before certain consonants in *Dikele*. N.B. *Tekeza* **n** = **NU-L**.

bu-, **bo-**, **b-** in *Fernandian*.

u- (with other forms) in *Nano* and *Benga*.

o- in *Mpongwe* and *Fernandian*.

(—) The prefix falls off in very few cases, noted, as yet, only in *Kafir*, *Zulu*, *Seǃlapi*, *Dikele*, and *Fernandian*.

ETYMOLOGY. Probably originally identical with the preposition *mu-* "in," of Kongo, and *mo-* of the Bunda Genus and of Setshuâna. (§§ 437—440.)

RANGE OF MEANING. The original local meaning is not always clearly visible in nouns of this class, which includes particularly many names of trees, and, in the South-eastern Branch, names of rivers. Although the personal nouns which originally belonged to this class, have as a general rule been drawn over to the 1st (**MŪ-**) class,—a few such are still to be found in the 3rd class in most of the South African Bantu languages.*

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 4th (**MI-**) class universally;

* For personal nouns of the 3rd (**MŪ-**) class in Kafir, *vide* p. 160 (note), to which the Rev. J. W. Appleyard adds the following remarks: "There are a few more personal nouns in the 3rd class than those you mention. Thus *u-mi-duna* 3. 'a person of eminence or rank,' pl. *i-mi-duna* 4.; *u-mi-ginwa* 3. 'a profane person,' pl. *i-mi-ginwa* 4. Tribal names are also found in the same class, as the *I-mi-dushane* 4."

- TO THE 6th (**MA**-) class, in a few cases, with a special plural meaning, in *Seklapi*, (perhaps in *Mpongwe*), and in *Dikele*.
 „ „ 10th (**TIN**-) class, only in nouns which have been transferred from the 11th (**LU**-) class, in *Mpongwe*.
 „ „ 2nd (**BA**-) class in a few nouns (of persons) in *Dualla* and *Isubu*.

4. FOURTH PREFIX: **MI**-.

519. The fourth prefix (**MI**-) is met with in all South African *Bantu* languages.

THE FOURTH (**MI**-) PREFIX.

SOUTH-EAST. BR.	KAFIR SPECIES.	mi-		
	SETSHUANA.	me-		
	TEKEZA.	} mi- {		
MOSAMBIQUE GEN.				
ZANGIAN GENUS.				
INT.	BAYEITE.	me-		
BUNDA GENUS.	OTYIHERERÓ.	} mi- {		
	SINDONGA.			
	NANO.		vi-	
	ANGOLA.			
KONGO G.	KONGO.	} in- i-		
	MPONGWE.			
NORTH-WESTERN BRANCH.	DIKELE.	} mi- { me- {		
	BENGA.			
	DUALLA.			
	ISUBU.		m-	
	FERNANDIAN.		bi(1)- be-	

FORMS. **mi**- in all

South African *Bantu* languages, *excepting* the *Setshuana* dialects, (*Bayeiye*), *Mpongwe*, and *Fernandian*. N.B. With other forms in *Nano*, *Benga*, *Dualla*, and *Isubu*.

me- the only form in *Setshuana*,— with other forms in *Benga*, *Dualla*, and *Isubu*. N.B. *Bayeiye me*- may be due to *Setshuana* orthography.

m- in *Isubu*.

in- and **i**- in *Mpongwe*.

vi- in *Nano*.

bi- and **be**- in *Fernandian*.

RANGE OF MEANING. Apparently entirely dependent upon its correspondence to the 3rd (**MU**-) class.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS PLURAL TO THE 3rd (**MU**-) class universally.

- „ „ 14th (**BU**-) class regularly in *Kinika*, *Benga*, *Dualla*, and *Isubu*.*
- „ „ 1st (**MU**-) class in one noun in *Dualla*, and another in *Isubu*, which probably belonged originally to the 3rd (**MU**-) class.
- „ „ 7th (**KI**-) class in one *Dikele* noun, which is probably a sort of diminutive of a noun belonging to the 3rd (**MU**-) class.
- „ „ 6th (**MA**-) class in one *Dikele* noun, doubtful.

5. FIFTH PREFIX: **DI**- OR **LI**-.

520. Nouns of the fifth (**DI**-) class are met with in all South African *Bantu* languages.

FORMS. **di**- in the languages of the *North-western* Branch.

d- (before certain vowels) in the languages of the *North-western* Branch.

dy- in *Benga*.

dsh- in *Dualla*.

(**d**)**zi**- in *Sena*, besides the more usual **ri**-.

zi- in *Tette*.

li- regularly in *Kafir* and *Zulu*,—with other forms in *Kihiau* and *Bayeiye*.

le- in the *Setshuâna* dialects (Sesuto and Seǀlapi). N.B. Bayeiye **le**- may be Setshuâna orthography.

ri- in *Tekeza*, *Sena*, *Kihiau*, *Angola*, and *Kongo*.

r- a doubtful form in *Fernandian*.

e- (= **o-RI**-) regularly in *Otyihereró* and *Sindonga*,—with other forms in *Nano* and *Kongo*.

ni- and (i)**n**- regularly in *Makua*.

i- regularly in *Mpongwe*,—with other forms in *Kikámba*, *Nano*, *Benga*, *Dualla*, *Isubu*, and *Fernandian*.

y- in *Kikámba* and *Isubu*. N.B. Modified from **i**-.

(—) The prefix elided in the languages of the *South-eastern* Branch, in *Tette*, *Sena*, and *Kihiau*, in the *Zangian* Genus (being altogether omitted in *Kinika*, *Kisúáheli*, and *Kisambala*), and in *Angola*.

* The case of *Dualla* **bo-eli** (*Isubu* **bw-eli**) 14. “tree” pl. **mi-eli** 4., when compared with *Zulu* u-**mu-ti** 3. pl. i-**mi-ti** 4. (§ 428, note), seems to suggest that this correspondence of nouns of the 14th (**BU**-) class to those of the 4th (**MI**-) may have arisen from the circumstance that a noun of the 3rd (**MU**-) class (by a change of the consonant of the prefix) had acquired the form of the 14th (**BU**-)

THE FIFTH (**LI-**) AND SIXTH (**MA-**) PREFIXES.

class. It would then either retain its old plural form with the 4th (M-) prefix, or gain, by analogy, a new plural with the 6th (MA-) prefix, as Isubu **ma-li** 6. "trees."

ETYMOLOGY. *Vide* § 441.

RANGE OF MEANING. In Kisambala "if anything is to be spoken of as remarkably large, it is brought into this class." (Dr. Steere's Collection for a Handbook of the Shambala Language, p. 6.) In Otyihereró, also, Hahn observes ("Grammatik" § 38) that the nouns of this class particularly indicate subjects in which there is something remarkable, prominent, especial, &c. We seem to observe this in *e-kaš'e-ndu* 5: "very tall woman," pl. *o-ma-kaš'e-ndu* 6., when compared with *o-mu-kaš'e-ndu* 1. "woman," pl. *o-va-kaš'e-ndu* 2. (§ 494 and note.) *Vide*, however, also *e-kaš'e* 5. "tendency to produce none but female offspring," &c., p. 208, note. Rath's observation, that this prefix is mainly used when one of two things which constantly occur in pairs, is to be indicated (p. 200), is liable to many exceptions.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 6th (MA-) class in all South African Bantu languages.

" " 2nd (BA-) class in one Kongo noun.

" " 12th (TU-) class in a few exceptional cases in Dualla and Isubu,—probably in consequence of homophony with the 7th prefix.

" " 8th (PI-) class, doubtful, in Fernandian.

6. SIXTH PREFIX: MA-.

521. The sixth prefix (MA-) is common to all South African Bantu languages.

FORMS. *ma-* in all these languages, *excepting* Nano, Mpongwe, and Fernandian.

me- in a few cases in Kikamba, Kisambala, Otyihereró, &c.

m- before vowels, in Kafir, Zulu, Setshuana, Makua, Kihian, Kihika, Sudaheli, Angola, Kongo, Dikele, Benga, Dualla, and Isubu. N.B. Although *m-* is only found before vowels, yet *ma-* before vowels is not always shortened to *m-*.

va- and *v-* in Nano.

ba- and *b-* in Fernandian.

am- ' (with the initial consonant of the stem strengthened) and *a-* in Mpongwe.

(—) Prefix omitted perhaps in Kikamba.

RANGE OF MEANING. Plural (in Setshuana sometimes indicating a very great number), collective (particularly applied to liquids), sometimes abstract. (§ 452.) The liquid meaning, which may be after all a secondary one like that of tree or river in the 3rd prefix, appears, however, to have stamped this class early with the

character of a liquid class (or gender). Evidences of this ancient structural peculiarity of the South African Bantu languages, are also visible in some West African Bantu languages, as in TIMNEH (Schlenker's "Grammar" p. 89) and BULLOM (Nyländer's "Grammar" p. 18),—and in at least one of the Oceanic Prefix-pronominal languages, viz, in FIJI (Hazlewood's "Grammar" p. 19).

CORRESPONDENCE. THIS CLASS CORRESPONDS AS PLURAL TO THE 5th (**DI-**) class regularly in all South African Bantu languages.

- " " **14th (BU-)** class regularly in *Setshuâna*, *Makua*, *Kihiau*, *Kikâmba*, *Otyihereró*, *Angola*, in the *Kongo* Genus (*Kongo* and *Mpongwe*), in *Dikele*, *Isubu*, and *Fernandian*. N.B. In *Kikamba*, *Otyihereró*, *Angola*, and *Dikele*, cases occur in which the 6th prefix is prefixed to the 14th, instead of taking its place.
- " " **11th (LU-)** class occasionally in the *Kafir* and *Setshuâna* dialects, in *Tshiyao*, *Suáheli*, *Angola*, *Dikele*, *Dualla*, and *Isubu*. N.B. In some cases in *Angola* and *Isubu* the 6th prefix is prefixed to the 11th (as *ma-lu-*), instead of replacing it.
- " " **9th (N-)** class frequently in the *North-western* Branch languages (*Benga* and *Fernandian* excepted),—in a few cases in the *Kafir* and *Setshuâna* dialects, and in *Tette*. N.B. Prefixed to the 9th (as *ma-n-*) in *Tette*, *Dikele*, *Dualla*, and *Isubu*.
- " " **15th (KU-)** class in *Seǀlapi*, *Kikamba*, *Otyihereró*, *Sindonga*, and in the *Kongo* Genus (*Kongo* and *Mpongwe*). N.B. Prefixed to the 15th prefix (as *ma-ku-*), in some cases, in *Otyihereró* and *Sindonga*.
- " " **1st (MU-)** class in a few special cases in *Kafir*, *Zulu*, *Sesuto*, *Sena*, (perhaps *Kikamba*), and *Kongo*.
- " " **3rd (MU-)** class in *Seǀlapi* (in which correspondence the 6th prefix has, however, more of a collective meaning), in *Dikele*, and perhaps in *Mpongwe*.
- " " **13th (KA-)** class in *Nano* and *Dikele*.
- " " **7th (KI-)** class, very doubtful, in one *Sindonga* noun.

THIS (SIXTH) CLASS IS SAID ALSO TO CORRESPOND AS SINGULAR TO THE 4th (**MI-**) class in one case in *Dikele*, which is, however, very doubtful.

7. SEVENTH PREFIX: **KI-**.

522. With this modification, that the identity of the forms (**vi-** and **i-**) in the *North-western* Branch with

this prefix is not perfectly certain (§§ 503 and 507), we may state that the seventh prefix (**KI-**) is met with in all South African *Bantu* languages.

FORMS. **ki-** in the *Zangian* Genus, in *Kihiau*, *Angola*, and *Kongo* ;
—in the two latter languages written in Portuguese orthography **qui-**.

ke- once or twice in *Kongo*.

iki- or **ik-** in *Makua*.

tyi- in *Otyihereró* and *Nano*.

ty- (before vowels) in *Otyihereró*.

tshi- in *Tekeza*, *Tette*, *Senà*, and perhaps *Kihiau*.

tshe- occasionally in *Tekeza*.

tsh- (before vowels) in *Sena* and *Kisambala*.

dshi- in *Kihiau* and *Kinika*.

dsh- (before vowels) in *Sena*, *Kikamba*, *Kinika*, *Kisúáheli*, and *Isubu*.

shi- in *Tette* and *Sindonga*.

sh- (before vowels) in *Sindonga*.

si- and **s-** in *Kafir*, *Zulu*, and *Fernandian*.

se- in *Setshuâna*. N.B. Bayeiye **se-** may be due to *Setshuâna* orthography.

ez- (before vowels) in *Mpongwe*.

vi- and **v-** in *Dikele* and *Benga*.

i- in *Benga*, *Dualla*, and *Isubu*. N.B. *Makua* **i-** is probably merely the article, while the derivative prefix of the noun has been omitted.

e- regularly in *Mpongwe*.

y- (before some vowels) in *Dualla* and *Isubu*.

(—) The prefix omitted, as far as we know, only in *Seǀlapi* and *Makua*.

ETYMOLOGY. *Vide* § 441.

RANGE OF MEANING. Various,—chiefly either instrumental, or neutral,—in *Tette* and *Sena* indicating largeness, in *Kongo* and *Fernandian* used for the formation of diminutives. (§§ 430, 503, and 514.)

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 8th (**PI-**) class in the *South-eastern* Branch and *Middle* Branch languages, and in *Dualla*. N.B. Although this correspondence has not yet been proved in *Tekeza*, *Makua*, and Bayeiye, we do not doubt that it also takes place in these languages.

„ „ 12th (**TU-**) class in the *North-western* Branch languages.

„ „ 4th (**MI-**) class in one noun in *Dikele*, doubtful.

„ „ 6th (**MA-**) class, very doubtful, in one *Sindonga* noun.

8. EIGHTH PREFIX: PI-.

523. The eighth prefix (PI-) probably occurs in all South African *Bantu* languages,—although, as yet in

Tekeza, Makua, and Bayeiye, the forms of this prefix have not been ascertained.

FORMS. **pi-** in *Sena*. N.B. **psi-**, on p. 174, is a misprint.

bi- in the North-western Branch languages.

be- (a variety of **bi-**) in *Benga*, *Dualla*, and *Isubu*.

vi- in *Otyihereró*, *Sindonga*, *Nano*, and *Kisambala*.

vy- (before vowels) in *Kisambala*.

vi- or **wi-** in *Kihiau*, *Kinika*, and *Kisudheli*.

psi- in *Tette*.

xi- and **z-** in *Kafir* and *Zulu*.

li- or **fi-** in *Setshuâna*.

hi- (**i-**) in *Kihiau* and *Angola*.

i- in *Kikamba*, *Sindonga*, *Angola*, *Kongo*, *Mpongwe*, and *Fernandian*.

y- in *Angola*, *Kongo*, and *Mpongwe*.

(—) The prefix may be elided in *Sexlapi* and *Mpongwe*.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS PLURAL TO THE 7th (**KI-**) class regularly in the South-eastern Branch and Middle Branch languages,—and occasionally in *Dualla*.

„ „ 13th (**KA-**) class regularly in the North-western Branch languages and in *Kisambala*.

„ „ 14th (**BU-**) class regularly in *Nano*.

„ „ 5th (**DI-**) class in one doubtful case in *Fernandian*.

9. NINTH PREFIX: **N-**.

524. The ninth prefix (**N-**) occurs in all South African *Bantu* languages.

FORMS. **n-** in all *Bantu* languages. N.B. Sometimes a short vowel precedes the nasal, as **in-** in *Tekeza*, *Sena*, *Tette*, and *Makua*,—**en-** in *Tekeza*, *Kinika*, and *Bayeiye*,—**um-** in *Kinika* and *Kisudheli*.

n-' (with the initial consonant of the stem strengthened) in the *Kafir* and *Setshuâna* dialects, and in the *Kongo* Genus. N.B. The only form in the *Kongo* language.

m- before labials, in all South African *Bantu* languages, excepting *Kongo*. N.B. Sometimes a short vowel precedes this nasal, as **im-** in *Tekeza* and *Angola*,—**em-** in *Tekeza* and *Kinika*.

m-' (with the initial consonant of the stem strengthened) in the *Kafir* and *Setshuâna* dialects, and in *Mpongwe*.

ɲ- before gutturals, in *Otyihereró*, *Sindonga*, *Nano*, and *Isubu*.

n-' (with the initial consonant of the stem strengthened) in *Seǀlapi*.

(—) The prefix very frequently elided or omitted in all South African *Bantu* languages, Zulu and Kongo *excepted*. N.B. Cases of such omission have not yet been proved in Bayeiye and Fernandian; but we cannot doubt that they also occur in these languages.

(—) **'** (with strengthened initial of the stem) in *Setshuâna* and *Mpongwe*.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 10th (**TIN-**) class in all South African *Bantu* languages, *excepting* Dikele.

„ „ 6th (**MA-**) class (by preference) in the North-western Branch languages, Benga and Fernandian *excepted*;—rarely in the *Kafir* and *Setshuâna* dialects, and *Tette*. N.B. The 6th (**ma-**) prefix is frequently prefixed to the 9th (as **ma-n-**, **ma-m-**) in *Tette*, *Dikele*, *Dualla*, and *Isubu*.

„ „ 12th (**TU-**) class, in one doubtful case in *Kikâmba*.

„ „ 2nd (**BA-**) class in *Kongo*, *Dualla*, and *Isubu* (personal nouns). N.B. The 2nd prefix is, however, prefixed to the 9th (as **ba-n-**, **a-n-'**, **a-'**, &c.).

10. TENTH PREFIX: **TIN-**.

525. The tenth prefix (**TIN-** or **THIN-**) is met with in all South African *Bantu* languages. The Makua form of this prefix has, however, not yet been ascertained.

FORMS. **thin-**, **tin-** (**ti-in-**), **tim-**, **thi-**, and **the-** in *Tekeza*.

zin- in *Kafir*, *Zulu*, *Tette*, *Sena*, *Bayeiye*, and *Kongo*. N.B.

With strengthened initial of the stem (**zin-'**) in *Kafir*, *Zulu*, and *Kongo*.

zim- (before labials) in *Kafir*, *Zulu*, and *Tette*. N.B. With strengthened initial of the stem (**zim-'**) in *Kafir* and *Zulu*.

zi- in *Kafir*, *Zulu*, and *Tette*.

lin-', **lim-'**, **lin-'**, and **li-'** (with strengthened initial of the stem) in *Setshuâna*. N.B. In Moffat's last edition of the New Testament in *Seǀlapi*, **ř** takes the place of **l** in this prefix, as well as in the eighth.

sin-', **si-'**, and **shi-'** (with strengthened initial of the stem) rarely in *Mpongwe*.

shin- (**gin-**), **shim-**, and **shi-** in *Angola*.

shon- (**jon-**), **shom-**, and **sho-** in *Angola*.

ʒ'on-, **ʒ'om-**, and **ʒ'onh-** in *Otyihereró* and *Nano*.

ʒ'o in *Otyihereró*, *Sindonga*, and *Nano*.

n- in *Kafir*, *Zulu*, *Sena*, *Kihiau*, the *Zangian* Genus, *Sindonga*, *Kongo*, *Benga*, *Dualla*, *Isubu*, and *Fernandian*. N.B. With strengthened initial of the stem (**n-·'**) in *Kafir*, *Zulu*, and *Kongo*.—A short vowel sometimes precedes the nasal, as—**un-** in *Kisuheli* and *Kinika*,—and **en-** in *Kinika*.

m- (before labials) in *Kafir*, *Zulu*, *Sena*, *Kihiau*, the *Zangian* Genus, *Sindonga*, *Benga*, *Dualla*, *Isubu*, and *Fernandian*. N.B. With strengthened initial of the stem (**m-·'**) in *Kafir* and *Zulu*.—A short vowel sometimes precedes the nasal, as **em-** in *Kinika*.

in-·' and **im-·'** (with strengthened initial of the stem) in *Mpongwe*.

ni- (before the 11th prefix, as **ni-u-**) sometimes in *Kinika* and *Kisuheli*.

ny- sometimes in *Kisambala*.

mi- (in certain combinations) in *Kinika*.

i- in *Fernandian*, and (with strengthened initial of the stem, as **i-·'**) in *Mpongwe*.

(—) The prefix elided in the *Kafir* language, in *Seǃlapi*, *Tette*, *Sena*, *Kihiau*, the *Zangian* Genus, *Angola*, *Dikele*, *Benga*, *Dualla*, and *Isubu*. N.B. The strengthened initial of the stem is, however, retained (—**·'**) in *Seǃlapi*.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS PLURAL TO THE 9th (**N-**) class in all *Bantu* languages, *excepting* *Dikele*.

„ „ 11th (**LU-**) class in the *South-eastern* Branch languages, in *Kihiau*, in the *Zangian* Genus, in *Otyihereró*, *Sindonga*, *Nano*, *Kongo*, (perhaps in *Mpongwe*,) in *Dikele* and *Fernandian*.

„ „ 13th (**KA-**) class in *Bayeiye* and *Nano*.

„ „ 14th (**BU-**) class in *Kisambala* and *Benga*.

„ 1st (**MÜ-**) class in *Angola*, in nouns transferred from the 9th (**N-**) to the 1st class.

11. ELEVENTH PREFIX: **LU-**.

526. The eleventh (**LU-**) class has *not* yet been found in *Tette*, *Sena*, *Makua*, or *Benga*,—although it may exist in these languages. It has amalgamated with the 5th (**le-**) class in *Sesuto*, with the 14th (**u-**) in *Kisuheli*, and with the 3rd (**o-**) in *Mpongwe*. In the *remaining* South African *Bantu* languages the 11th exists as a separate class.

Review of the Eleventh Derivative Prefix of Nouns. 271

FORMS. **1u-** in *Kafir, Zulu, Kihíúu, Kinika, Kisambala, Sindonga, Nano, Angola, Kongo*, and *Fernandian*.

1o- in *Seǃlapi* and *Fernandian*. N.B. Bayeiye **1o-** may be Setshuâna orthography.

1i- in *Tekeza* (Lourenzo Marques).

1e- in *Sesuto*, homophonous with the 5th prefix.

1a- and **ʼa-** in *Dikele*.

1- in *Kongo, Dualla, Isubu*, and *Fernandian*.

ru- in *Otyihereró* and *Sindonga*.

ro- in *Bayeiye*.

u- in *Kikám̃ba, Kisuáheli*, and *Kongo*. N.B. In *Kisuáheli* homophonous with the 14th prefix.

w- (before vowels) in *Kisuáheli*, homophonous with the 14th prefix.

o- in *Mpongwe*, homophonous with the 3rd prefix.

(—) The prefix elided in *Kafir, Zulu, Seǃlapi*, and *Nano*.

ETYMOLOGY. *Vide* § 441.

RANGE OF MEANING. In *Otyihereró* the missionaries believe that they have observed in this prefix the idea of length, extension, &c. It tallies curiously with this, that in *Timneh* (a Bantu language spoken near Sierra Leone) "rope-like or creeping plants have commonly the prefix **ra-** in the singular." (Schlenker's *Grammar of the Temne language*, p. 38.)

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE **10th (TIN-)** class in the *South-eastern Branch* languages, in *Kihiau*, in the *Zangian Genus*, in *Otyihereró, Sindonga*, (perhaps in *Nano*), in the *Kongo Genus* (*Kongo* and *Mpongwe*), in *Dikele*, and *Fernandian*. N.B. The 11th prefix may have the 10th prefixed (as **ni-u-**) in *Kinika* and *Kisuáheli*.

" " **6th (MA-)** class in the *Kafir* and *Setshuâna* dialects, in *Tshiyao* (p. 178, note), *Suaheli, Angola, Dikele, Dualla*, and *Isubu*. N.B. The 6th prefix is regularly prefixed to the 11th in *Angola* (as **ma-lu-**), and sometimes in *Isubu* (as **ma-l-**).

" " **12th (TU-)** class regularly in *Otyihereró, Sindonga*, and *Kongo*.

12. TWELFTH PREFIX: TU-.

527. The twelfth prefix (**TU-**) occurs in all the *North-western Branch* languages, in *Tette, Sena, Kikamba, Otyihereró, Sindonga, Angola*, and *Kongo*,—but is *extinct* in the *South-eastern Branch*, and in *Kinika, Kisuáheli*, and

Mpongwe. It has not yet been met with in Makua, Kihiau, Kisambala, Bayeiyé, and Nano, although it may possibly occur in one or more of these languages.

FORMS. **tu-** in all *Middle Branch* languages which possess this prefix, *viz.*, in Tette, Sena, Kikámba, Otyihereró, Sindonga, Angola, and Kongo.

to-, **tw-**, and **t-** in *Fernandian*.

lo- in *Benga*, *Dualla*, and *Isubu*.

la- in *Dikele*.

l- in *Dikele*, *Benga*, and *Isubu*.

RANGE OF MEANING. Diminutive Plural in Tette, Sena, Kikámba, Angola, and Fernandian; in other languages it has a different meaning.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS PLURAL TO THE **13th (KA-)** class regularly in *Tette*, *Sena*, *Kikámba*, and *Angola*.

„ „ **11th (LU-)** class regularly in *Otyihereró*, *Sindonga*, and *Kongo*.

„ „ **7th (KI-)** class regularly in the *North-western Branch* languages.

„ „ **5th (DI-)** class, in a few cases (probably mistaken for the 7th), in *Dualla* and *Isubu*.

„ „ **9th (N-)** class, in one doubtful case, in *Kikámba*.

13. THIRTEENTH PREFIX: **KA-**.

528. Provided that our identification of the forms of the 13th prefix (**KA-**) be correct, we may say that it is found in all the *North-western Branch* languages, and also in all the *Middle Branch* languages, *excepting* Suáheli and Mpongwe.* In the two latter languages, as well as in those of the *South-eastern Branch*, it is now *obsolete*.

FORMS. **ka-** in all those *Middle Branch* languages in which it occurs. N.B. This was also the old Kafir form, as in *pa-ka-ti*. (*Vide* § 436.)

k- (before vowels) in *Kikámba*.

ga- in *Nano*, besides **ka-**.

XA- in *Seklapi*, and **HA-** in *Sesuto*, obsolete forms, = Kafir **KA-**. (§§ 87 and 436.)

* Notwithstanding that the 13th prefix has *not* yet been met with in the Kihian vocabularies, it is not impossible that it may occur in this language.

dsh- (before vowels) and **a-** (before consonants) in *Dikele*.

y- (before some vowels) in *Benga*, *Dualla*, and *Isubu*.

e- regularly in *Benga*, *Dualla*, *Isubu*, and *Fernandian*.

ETYMOLOGY. Perhaps related to the Kafir genitive particle *ka-* (Setshuâna *xa*) "of." *Vide* § 441.

RANGE OF MEANING. Diminutive Singular in the Middle Branch languages, excepting in Kongo. It has, however, no diminutive meaning in the North-western Branch languages.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE **12th (TU-)** class regularly in *Tette*, *Sena*, *Kikamba*, and *Angola*.

" " **8th (PI-)** class regularly in the *North-western* Branch languages, and in *Kisambala*.

" " **14th (BU-)** class regularly in *Otyihereró*.

" " **6th (MA-)** class frequently in *Nano*, and at least once in *Dikele*.

" " **10th (TIN-)** class in *Bayeiye* and *Nano*.

14. FOURTEENTH PREFIX: **BU-**.

529. The fourteenth prefix (**BU-**) is common to all South African *Bântu* languages,—although, in some of them, it appears to have almost amalgamated with other classes.

FORMS. **bu-** in *Kafir*, *Zulu*, *Tekeza*, *Benga*, *Isubu*, and *Fernandian*.

bo- in *Setshuâna*, and in the *North-western* Branch languages.

bw- (before vowels) sometimes in *Benga*, *Dualla*, and *Isubu*.

bi- usually in *Dikele*.

be- in *Tekeza*, doubtful.

b- (before some vowels) in *Kafir*, *Zulu*, *Dikele*, *Benga*, *Dualla*, and *Isubu*.

u- in all *Middle* Branch languages here described,—excepting *Mpongwe*, and perhaps *Bayeiye*.

w- (before vowels) in *Makua*, *Suâheli*, and *Angola*.

ow- (before vowels) in *Mpongwe*.

o- in *Bayeiye*, *Kongo*, and *Mpongwe*.

(—) The prefix sometimes elided in the *Kafir* and *Setshuâna* dialects, in *Kihîáu* and *Kinika*.

RANGE OF MEANING. This prefix implies very generally an abstract meaning, and in a few nouns in *Seǀlapi* it has a local one. In *Otyihereró*, besides the abstract meaning in the singular, it is also used in a plural sense with reference to diminutives.

FOURTEENTH (BU-) AND FIFTEENTH (KU-) PREFIXES.

SOUTH-EASTERN BRANCH.	KAFIR.	{ bu- b- }	{ ku- kw- }
	ZULU.		
	SÊLAPI.	{ bo- }	{ (—) }

	KINIKA.		
	SUAHELI.		kw-
	KISAMBALA.		
INT.	BAYEYE.	o-	ko-
BUNDA GENUS.	OTYIHERERÓ.	{ u- }	{ ku- }
	SINDONGA.		
	NANO.		gu-
	ANGOLA.		
KONGO G.	KONGO.	{ o- }	{ ku- }
	MPONGWE.		
NORTH-WESTERN BRANCH.	DIKELE.	bi-	
	BENGA.	bu-	
	DUALLA.	{ bo- }	{ b- }
	ISUBU.		
	FERNANDIAN.	bu-	

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 6th (**MA-**) class in *Setshuana*, *Sena*, *Makua*, *Kihiaú*, *Kikamba*, *Otyihereró*, *Angola*, *Kongo*, *Mpongwe*, *Dikele*, *Isubu*, and *Fernandian*. N.B. The **ma-** may be prefixed (as **MA-BU-**) in *Kikamba*, *Otyihereró*, *Angola*, and *Dikele*.
 „ „ 4th (**MI-**) class in *Kinika*, *Benga*, *Dualla*, and *Isubu*. N.B. The fourth prefix may be prefixed (as **mi-o-**) in *Benga* and *Dualla*.
 „ „ 8th (**PI-**) class in *Nano*, the 4th (**mi-**) prefix being probably softened here (as it sometimes is) to the form of the 8th (**vi-**).
 „ „ 10th (**TEIN-**) class in *Kisuheli* and *Kisambala*, and in one case in *Benga*. N.B. The 10th may be prefixed to the 14th prefix (as **ni-u-**) in *Kisuheli*. This correspondence probably originates in the fourteenth prefix having been confounded by homophony with the eleventh.

THIS CLASS ALSO CORRESPONDS AS PLURAL TO THE 13th (**KA-**) class regularly in *Otyihereró*.

15. FIFTEENTH PREFIX: **KU-**.

530. The fifteenth prefix (**KU-**) is met with in all the *South-eastern Branch* and *Middle Branch* languages, *excepting* *Mpongwe*, where it has apparently amalgamated with the 3rd prefix (**OW-**). The fifteenth class does *not* occur in the *North-western Branch* languages, *excepting* a faint trace of it in *Isubu*.

FORMS. **ku-** in *Kafir*, *Zulu*, *Tekeza*, *Tette*, *Sena*, *Kihiaú*, in the *Zangian Genus*, in *Otyihereró*, *Sindonga*, *Angola*, and *Kongo*.

kw- (before vowels) in *Kafir*, *Zulu*, and *Suáheli*.

ko- in *Tekeza*, *Bayeiye*, and *Sindonga*.

k- (before certain vowels) in *Zulu*, and *Otyihereró*.

gu- in *Nano*.

xo- (**go-**) in *Seǻlapi*.

h'o- (**go-**) in *Sesuto*.

u- and **w-** in *Makua*.

ow- and **o-** in *Mpongwe*, homophonous with the third prefix, and apparently amalgamated with the 3rd class.

(—) The prefix does not appear in one *Seǻlapi* noun, which has, however, probably been transferred to the 15th from the 16th class. (§ 435.) N.B. The omission of this (or the kindred 17th) prefix in the *Zangian Genus* has occasioned the curious construction of the *Zangian* locative cases. (§§ 478—480.)

ETYMOLOGY. Originally identical with the preposition *ku-* "to," (§§ 433 and 434.)

RANGE OF MEANING. Infinitive and local.

CORRESPONDENCE. THIS CLASS CORRESPONDS AS SINGULAR TO THE 6th (**MA-**) class in *Séklapi*, *Kikámba*, *Otyihereró*, *Sindonga*, *Kongo*, and *Mpongwe*. N.B. The 6th prefix may be prefixed (as **ma-ku-**) in *Otyihereró* and *Sindonga*.

SIXTEENTH (**PA-**), SEVENTEENTH, AND EIGHTEENTH PREFIXES.

16. SIXTEENTH PREFIX: **PA-**.

MOSAMBIQUE GENUS.	TETTE.	}	pa-		
	SENA.				
	MAKUA.				
	KIHIAU.		pa-		
ZANGIAN GENUS.	KIKAMBA.		wa-	}	(—)
	KINIKA.		va-		
	SUAHELII.		pa- ma-		
	KISAMBALA.		ha-		
INT.	BAYEYE.				
BUNDA GENUS.	OTYIHERERÓ.		po-	ko-	mo-
	SINDONGA.				
	NANO.				
	ANGOLA.				
KONGO G.	KONGO.				
	MPONGWE.				
NORTH-WESTERN BRANCH.	DIKELE.				
	BENGA.				
	DUALLA.				
	ISUBU.		o-		
	FERNANDIAN.				

531. The sixteenth (**PA-**) class includes very few nouns, and in most languages in which it occurs, only one. This prefix has been met with in *Tette*, *Sena*, *Kihiaú*, in the *Zangian* Genus, in *Otyihereró*, and probably in *Isubu*. It has *not* been found in any of the languages of the South-eastern Branch, nor in those of the North-western (excepting perhaps in one case in *Isubu*), nor in the *Kongo* Genus. Whether it occurs

in Makua, Bayeiye, Sindonga, Nano, and Angola, is uncertain.

FORMS. **pa-** in *Tette*, *Sena*, *Kihidu*, and *Kisuheli*.

va- in *Kinika*.

wa- in *Kikamba*.

ma- (besides **pa-**) in *Kisuheli*.

ha- in *Kisambala*.

po- in *Otyihereró*.

o- in *Isubu*.

ETYMOLOGY. Identical with the preposition *pa-* "at, near." (§§ 435 and 436.)

RANGE OF MEANING. Near locality; without correspondence to any other prefix as singular or plural.

17. SEVENTEENTH PREFIX: **KO-**.

532. The seventeenth prefix (**KO-**) occurs only in *Otyihereró*, and perhaps in the *Zangian* Genus.

FORMS. **ko-** in *Otyihereró*.

(—) The prefix elided (with *-ni* suffixed to the stem) in the *Zangian* Genus (*Kikamba*, *Kinika*, *Kisuheli*, &c.).

ETYMOLOGY. Related either to the Kafir preposition *kwa-* (*Setshuana kuā-*) "from," or to *ku-* "to, from." In the latter case, this class has merely branched off from the 15th (**ku-**) class.

RANGE OF MEANING. Distant locality; without correspondence to any other prefix as singular or plural.

18. EIGHTEENTH PREFIX: **MO-**.

533. The eighteenth prefix (**MO-**) is only met with in *Otyihereró*, and probably in the *Zangian* Genus (*Kikamba*, *Kinika*, *Kisuheli*, &c.).

FORMS. **mo-** in *Otyihereró*.

(—) The prefix elided (with *-ni* suffixed to the stem) in the *Zangian* Genus.

ETYMOLOGY. The meaning of the *Zangian* preposition *mua-* "from" appears to be too different from that of the 18th prefix to admit of a comparison. It is more probable that the preposition *mu-* "in" is to be looked for in this prefix; and that the 18th class has branched off from the 3rd (**mu-**)

RANGE OF MEANING. Present locality; without correspondence to any other prefix as singular or plural.

f. THE DIFFERENT SYSTEMS OF CLASSIFICATION.

534. In order to guide the student in the perusal of other South African grammars, and to facilitate the comparison of our nomenclature with that of other grammarians, the Synoptical Table on pp. 278 and 279 has been constructed. From this, it will be seen that every one of the various modes of classification is mainly founded upon one of two principles. The majority of these systems combine the singular and plural forms corresponding to each other into one class. The objections to this method have been already stated, §459. Although APPLEYARD theoretically agrees with us on this point, he still thinks that "in particular grammars" "it may be as well to include such corresponding prefixes under one class," "as bringing the matter into more convenient shape." In this, I cannot agree with this excellent grammarian. The plan might answer sufficiently well, if it concerned the forms of the nouns alone; but in giving the other forms of concord, it is surely superfluous and encumbering to have, for instance, to give doubly the forms of our 10th (zin-) class in Kafir, because it corresponds as plural to the 9th (n-), and also to the 11th (lu-) class,—or is by Appleyard included with them under his 3rd and 5th "species" respectively. A few of the systems of classification agree with ours in assigning each distinct concord-indicating derivative prefix to a separate class. Here, some give in one row all the classes of the singular number, and let the plural classes follow in another. Among these grammarians is BOYCE, the compiler of the first Kafir Grammar; he has, however, wrongly placed our 8th and 10th classes together in his 11th "declension."* The Zulu grammarian SCHREUDER has corrected this error,

* In this he is followed by the Zulu grammarian BRYANT, whose system has not been incorporated into our table, as it is only given in an essay published in a periodical. It is identical with Boyce's, with the exception that Boyce's 2nd Declension (our 5th class) is Bryant's 3rd Class, and Boyce's 3rd Declension (our 9th class) is Bryant's 2nd Class.

and thus enumerates thirteen "beginnings;" the first ten of which are identical in numbers with Boyce's declensions. The Setshuâna grammarian HUGHES agrees with us in our numeration of the "classes" as far as the 4th of his "concorde;" but in the numbering of his remaining "concorde" no clear principle can be discovered. In our own classification (the numbers of which, as now fixed, date from about the year 1853) the principle upon which the houses in streets are so frequently numbered, has been (as far as possible) adopted. One side of the street may be supposed to contain all the singular classes and odd numbers, while the other side contains the plural classes, which are indicated by the even numbers. The practical convenience of this method will, we trust, soon lead to its general adoption, and thus obviate the interminable confusion which the practice of employing a different nomenclature for each language inevitably causes. It will be seen that the only other system of classification, which has been adopted by more than one author, is APPLEYARD'S. This, besides being based upon an arrangement of which we cannot approve, does not, of course, provide for the enumeration of those classes which are not to be found in Kafir; nor is its principle apparently favorable to extension.

G. THE ANCIENT FORMS OF THE DERIVATIVE PREFIXES OF THE NOUNS.

535. The forms possessed by the derivative prefixes of the nouns in that language from which the present South African Bantu languages have descended, can be arrived at by a comparison of the most primitive existing forms in the different dialects. (*Vide* Table on pp. 282—284.) The primitive forms of the prefixes are tolerably constant, while most of the secondary ones bear internal evidence of a more recent origin, dating since the division of the one language of the original Bantu nation into different branches, genera, and species. It is only in one or two instances that we cannot be quite sure as to the form

THE FULLEST FORMS OF THE DERIVATIVE PREFIXES

ANCIENT BANTU.	TU-	KA-	BU-	KU-	PA-

possessed by the derivative prefixes of the nouns in the original Bantu language. The form of the 5th prefix must have been either **DI-** or **LI-**, and that of the 10th prefix was probably **THIN-**. But there can be no doubt that, in the original Bantu language, **MU-** was the derivative prefix of the nouns of the 1st class, **BA-** of those of the 2nd, **MU-** of the 3rd, **MI-** of the 4th, **MA-** of the 6th, **KI-** of the 7th, **PI-** of the 8th, **N-** of the 9th, **LU-** of the 11th, **TU-** of the 12th, **KA-** of the 13th, **BU-** of the 14th, **KU-** of the 15th, and **PA-** of the 16th class.

536. Although comparison clearly shews that the forms given above must have been those of the derivative prefixes of the nouns at that period which immediately preceded the dismemberment of the original Bantu language,—there are, in some instances, forms yet older, at which we can still arrive. To ascertain these, we have to consult, besides the derivative prefixes of the nouns, also the pronominal elements,—which were originally identical with the prefixes, and which constitute the different forms of concord referring to them. Thus it will appear (for example) that **MU-** was not the most ancient form of the first prefix, but merely a phonetic adaptation of a still older form, which appears to have been something like **NGUA-**. The forms of particles as short as were these derivative prefixes of the nouns, must have been early affected, by their peculiar prefixed position, in a different manner from that in which the same elements would be moulded, when occurring in their pronominal capacity as marks of concord. The crushing weight of the stem must always have had the tendency to grind the prefixes into the most easily articulated forms. The influence of the stem can be clearly seen in the Zulu prefixes of the 1st and 3rd classes; which usually retain the form **mu-** before monosyllabic stems only, and before longer stems are contracted to **m-**. In Setsuana the 9th prefix is entirely absorbed before almost all stems which are not monosyllabic,—as *kuana* 9. “lamb,”

from *ni-ku* 9. "sheep," &c. In positions, therefore, where the weight of the stem was not pressing upon the forms of concord (with which the derivative prefixes of the nouns were originally identical), and where they stood either unencumbered, or else combined with such elements as affected them differently, we may expect that they would sometimes better preserve their original form. The tendency towards the use of such sounds as are most easily pronounced in the prefixal position, explains the fewness of the phonetic elements now to be met with in the whole number of the prefixes of the nouns. We shall see this more clearly by arranging the prefixes of the nouns, according to their phonetical relations, in the forms which they probably had in the original Bântu language.

A	I	U
M MA- (6.)	MI- (4.)	MU- (1., 3., & 18.)
K KA- (13.)	KI- (7.)	KU- (15. & 17.)
P PA- (16.)	PI- (8.)	
B BA- (2.)		BU- (14.)
L	LI- or DI- (5.)	LU- (11.)
T	TIM- or THIN- (10.)	TU- (12.)
N	N- (9.)	

It will be seen from this that **m** and **k** are favorite letters as consonants of these prefixes.

In the course of the second section of this part, it will be our business to ascertain (by analysis of the different forms of concord belonging to each class) the original form of each derivative prefix, as indicated by the various pronominal elements which must once have been identical with it. It is necessary thus to elucidate the most ancient ascertainable forms of the prefixes, if we desire to extend this comparison to those members of the Bântu family which are found *out of* South Africa (as Timneh,

Bullom, &c.), and still more to other Prefix-pronominal languages (such as the Gôr family, &c.). Those comparisons which already offer themselves will, therefore, be deferred until the end of this part of our Grammar.

h. THE MUTUAL CORRESPONDENCE OF THE CLASSES OF NOUNS AS
SINGULAR AND PLURAL.

537. As some of the correspondences between those prefixes which answer to each other as singular and plural, occur regularly in all Bântu languages, while others are only met with in some, or even one, of these languages,—the following table has been constructed, in order to shew the distribution of the correspondences of the different classes (or genders), throughout the South African Bântu languages. In this table, the ten prefixes of the singular number are arranged from the top to the bottom of the table, and the seven plural prefixes from left to right. The table contains seventy squares, and all of these in which such singular and plural prefixes meet as do not correspond to each other, have been left blank. Those squares which indicate correspondences met with in all SOUTH AFRICAN BÂNTU languages, have these words printed so as almost to fill the square. Those correspondences again, which are only met with in some of these languages, are indicated (in the squares) by the names of the Branches, Genera, Species, or single languages in which they occur. The names of the different languages have been so placed in each square, as to indicate to some degree their geographical position; thus the Western languages are to the left, the Eastern to the right, the Northern in the upper, and the Southern in the lower part of the square. The North-western Branch (N.W. BR.) has always been placed in the left hand corner at the top, the South-eastern Branch (S.E. BR.) in the right hand corner at the bottom; the Bunda Genus occupies the opposite lower left hand corner, and the Zangian Genus is opposite to the North-western Branch

A TABLE shewing the Distribution of the Correspondences between the SINGULAR and PLURAL Derivative Prefixes (and Classes) of Nouns in the South African Bantu Languages.

in the right hand top corner. As some of the correspondences between the classes of nouns (as singular and plural) are so exceptional as to occur in one language only, and occasionally in only one instance, the cipher "1" has been added to indicate the latter anomalous cases.

538. It must, however, be borne in mind, that in some instances the plural prefixes do not replace those of the singular, but are prefixed to them. Thus we find:

BA-MU-, the 2nd prefix (**BA-**) prefixed to the 1st (**MU-**), in the *Kafir* and *Setshuana* dialects, and in *Otyihereró*. In *Seǀlapi* these combined prefixes have still sometimes the form **bo-mo-**, but they are generally now contracted to **bo-** in the *Kafir* and *Setshuana* dialects, and in *Otyihereró* to **o-**.

BA-N-, the 2nd prefix (**BA-**) preceding the 9th (**N-**), in *Kongo* (**a-n-**) and *Isubu* (**ba-n-**).

MA-N-, the 6th prefix (**MA-**) preceding the 9th (**N-**), in *Dikele*, *Dualla*, and *Isubu*.

MA-LU-, the 6th prefix (**MA-**) preceding the 11th (**LU-**), in *Angola* and *Isubu*.

MA-BU-, the 6th prefix (**MA-**) preceding the 14th (**BU-**), in *Kikamba*, *Otyihereró*, *Angola*, *Dikele*, and *Dualla*.

MA-KU-, the 6th prefix (**MA-**) preceding the 15th (**KU-**), in *Otyihereró* and *Sindonga*.

THIN-LU-, the 10th prefix (**THIN-**) preceding the 11th (**LU-**), in *Kinika* and *Kisuheli* (**ni-u-**, **mi-u-**, &c.).

MI-LU-, the 4th prefix (**MI-**) preceding the 11th (**LU-**), in *Benga* and *Dualla*.

539. There is, of course, no doubt that the correspondences which are common to all South African Bantu languages, already existed in the mother tongue whence all these spring. Nor can we doubt that the same is the case with regard to correspondences which, although not present in every Bantu language, are yet of more or less frequent occurrence in each of the three Branches. Concerning correspondences which are met with in one Branch* only, or merely in one language,† it is more difficult to

* Such as the correspondence of the 12th (**TU-**) class as plural to the 7th (**KI-**) in the *North-western* Branch.

† E.g. the 14th (**BU-**) class as plural to the 13th (**KA-**) in *Otyihereró*.

decide whether they are ancient arrangements which have been retained, or special acquisitions of the language or group of languages in which they occur. But with regard to many of the correspondences, which appear in a few languages, sometimes only in one,—there is no doubt that the surrounding circumstances are such as to render it highly probable that they only owe their existence to the power of analogy or of logical inference. Few of these latter can, with any degree of probability, be supposed to be more than modern innovations. As far as we can see, the mother tongue, whence the present South African Bantu languages are derived, may have possessed a system of prefixal correspondence approximate to that laid down in the following table. Those correspondences, regarding the originality of which we are not perfectly certain, have been marked “(?)” More doubtful cases have been entirely omitted.

The Probable **Ancient** CORRESPONDENCES of the Derivative Prefixes of the Nouns in the South African **Bantu** Languages.

15. KU-			MA-KU-				

540. A comparison of the tables which illustrate the present and ancient correspondence of the prefixes, will

shew that not even the fullest of the present South African Bantu languages has retained all the correspondences which certainly existed at the period preceding their separation from the parent stock. Upon the whole, there is an evident tendency in these languages to restrict each singular prefix to the use of one especial plural; and thus to introduce a greater regularity into the method of correspondence. But, in some languages, this tendency is counteracted; chiefly because certain prefixes of nouns have been confounded with others (on account of their similarity of form), and the correspondence belonging to the one class thus applied to the other. The extensive domain of correspondence, which seems to have been the original property of the 6th (MA-) class, suggests the facility with which this prefix might either have superseded all other plural prefixes, becoming itself the exclusive indicator of the plural; or have acquired (by the side of the different plural correspondences) the force of a dual prefix,—a meaning which, in a certain very restricted sense, it even now possesses. (*Vide* p. 200.) The contemplation of such possibilities is by no means futile, for we generally find that wherever peculiar facilities exist for a different grammatical arrangement in a given language (or group of languages),—it will be observed as an achieved fact, in some kindred language or family of languages,

2. THE GENDERS AND NUMBERS OF NOUNS IN THE HOTTENTOT LANGUAGE.

541. In comparing the different forms of the derivative particles (prefixes) of nouns in the South African Bantu languages, we perceive that they evince a tendency to reduce the derivative particle (prefix) to a single letter (either vowel or nasal),—or even to elide it altogether. In the latter case, the class of the noun is no longer indicated by any formal element in the noun itself; and in the former, many instances of homophony of the prefixes are

produced, which render the derivative particle itself an uncertain guide to the class of the noun of which it forms a part. And while derivative particles, originally different, have thus become identical in form, the same phonetic changes may have taken place in the signs of concord (derived from the prefixes) rendering these also throughout identical. In this case, two originally distinct classes of nouns, by mere homophony, become one, as has been the case with regard to the 5th and 11th (**le-**) classes of nouns in Sesuto. (§ 456.) On the other hand, although the forms of different derivative particles may become identical, the forms of concord referring to them may yet remain either partly or wholly distinct; in which case the two classes continue to be kept separate; not, however, on account of the forms of their derivative particles, which have become homophonous, but because some of their forms of concord have remained distinct. In this manner, the 1st and 3rd (**MU-**) classes (which in most Bantu languages have the same forms for their derivative prefixes) still exist as perfectly distinct classes in all known South African Bantu languages, because they differ in some of their forms of concord,—as *-mu-* Zulu objective pronoun of the 1st, and *-wu-* the same of the 3rd class,—*-ke* possessive pronoun suffix of the 1st, and *-w-o* of the 3rd class. The natural inclination to maintain logical distinctions in the grammatical classification of the nouns may have assisted in keeping these classes asunder, notwithstanding the homophony of their derivative prefixes. This tendency may also, on the other hand, lead to the combination of two originally distinct classes, on account of their similarity of meaning. The two local classes, the 15th (**KU-**) and 16th (**PA-**) appear in the South-eastern Branch languages to have been thus thrown into one. Classes may also disappear, because the derivative particles, which in the first instance constituted them, cease to be employed. In this manner the 13th (**KA-**) class is unknown in the South-eastern Branch languages,—diminutives being formed here

exclusively by suffixes (*-ana*, *-anyana*, &c.), and not by the prefix **KA-**, so commonly used for the same purpose in the Middle Branch. Lastly, a class which only contains one or a few nouns must disappear, when the noun or nouns which constitute it, become obsolete.

542. We must also particularly bear in mind that, although the form of the derivative particle was, in the first instance, the determining element of the concord, and indicative of the class (or gender) to which a noun belonged,—yet the more a language has subsequently undergone phonetic changes, the less we shall find this to be the case. This goes frequently so far that a noun may belong to a class without bearing any visible mark of the derivative particle which, in the first instance, constituted the class (or gender), and was its sign. These general rules (deduced from the comparative study of the concord-indicating derivative particles of the nouns in the South African Bantu languages) are also borne out by a comparison of the forms of the derivative particles of the nouns in the different Hottentot dialects,—and still further by a comparison of the latter with those met with in the kindred Sex-denoting languages.

543. Firstly, the comparatively small number of eight classes (or genders) to be found in the fullest HOTTENTOT dialect, leads us to suppose that an originally larger number has been reduced to this by means of the processes indicated in § 541.* In Mpongwe, one of the most

* Although we do not assert that it is either right or advisable to compare, in detail, the Hottentot derivative suffixes of the nouns with the Bantu prefixes, it is not wholly impossible that such a comparison may be justified at a future stage of our researches. One inclined to hypothesis would at once suggest that in the Hottentot masculine singular gender (**-p** or **-bi**, **-mi**, &c.) we may be supposed to see a combination of the Bantu 1st (**MŪ-**), 3rd (**MŪ-**), 14th (**BU-**), 15th (**KU-**), and 16th (**PA-**) classes, with their personal, local, and abstract meanings;—that the 2nd (**BA-**) class has assumed the dual meaning so consonant with its supposed etymology in the Bantu languages, and is to be discerned in the Hottentot masculine dual (**-kha**) gender. The masculine plural (**-ku**) gender might then (by the same power of forcible hypothesis) be

modernized of the South African Bantu languages, we have seen that the number of the classes of nouns has been reduced from sixteen to ten. The Hottentot language is, however, not merely remarkable for a yet greater reduction in the number of the classes,—its distinctive characteristic among the South African languages being that the division of the nouns into classes has been brought throughout into some reference to certain logical distinctions. Every class (or gender) in Hottentot possesses a distinct numerical value, and five out of the eight classes (or genders) contain a clear reference to sex; while the remaining three classes (or genders) are also logically distinct, as leaving the sex undetermined. We thus have, with easy nomenclature, three *masculine* genders or classes (masc. singular, masc. plural, and masc. dual), two *feminine* ones (fem. singular and fem. plural), and three *common* genders or classes (common singular, common plural, and common dual). The numerical correspondence of these classes appears upon the whole to be very strictly carried through in the Hottentot language; but the reference to sex really extends only to such nouns as indicate beings in which the sex can be distinguished. Other nouns belong respectively to masculine, feminine, or common classes (or genders), merely on account of the suffix with which they are formed. It must, however, be remarked that there are a good number of nouns of

identified with the 12th (**TU**-) class, the feminine singular (**-s** or **-si**) with the 7th (**KI**-, Kafir **si**-) class, and the feminine plural (**-ti**) with the corresponding plural 8th (**PI**-) class. The common singular (**-i**) and plural (**-n**) classes might then appropriate the 9th (**N**-) and 10th (**THIN**-) classes to themselves, whilst for the common dual (**-ra**) gender would only remain the 6th (**MA**-) class with its inclination to a dual meaning. Such an explanation would only allow three classes (the 4th **MI**-, 11th **LU**-, and 13th **KA**-) to have become quite extinct. But, well as it provides for the other classes, it does so merely upon wild assumptions which are without a shadow of scientific proof. But, as mere hypotheses, shewing the possibility of a system of classification so extensive as that of the Bantu languages, being compressed within as narrow a sphere as that of the Hottentot classes (or genders) of nouns, these suppositions are perhaps not wholly out of order.

this impersonal character which are, with slight changes of meaning, used either with masculine, feminine, or common suffixes. Thus many nouns belong, in one dialect, to one gender (or class), and in another to a different gender, and even in the same dialect some authors give a noun with a masculine suffix, which others appear to know only as feminine, or common, and *vice versa*. The lists of nouns given below afford many examples of this plurality in the genders belonging to one and the same noun, and the frequent recurrence of such instances renders it probable that many nouns exist in different genders with variations of meaning which are so slight as to be barely perceptible to a foreigner.* To discern the delicate meanings implied by these changes in the forms of the nouns, and to interpret them aright is one of the most difficult tasks in the *synonymique* of the Hottentot language; and the different authorities are very frequently at variance on these almost intangible points. According to the Rhenish missionaries, Krönlein (p. 121) and Vollmer, the masculine gender in Hottentot implies something large and prominent. This seems also in some way to be the case in the ILOIGOB language (Ukuafi and Masai) which, geographically speaking, is in East Africa the nearest sex-denoting language to the Hottentot. (Erhardt's "Vocabulary of the Enguduk Iloigob," 1857.) It is clear that the presence of nouns representing impersonal objects in classes (or genders) to which a sex-denoting character had become attached, must naturally have favoured their personification, thereby frequently leading the mind to ascribe to these objects the most obvious attributes of the

* In this respect we may study with particular advantage such pieces of Hottentot traditional literature as have been taken down from the lips of natives. The first translation of the Gospels into the Nama dialect appears to me for this very reason also particularly worthy of attention, as being chiefly the work of a native (the excellent Mrs. Schmelen) and, therefore, probably in some ways more idiomatic than any of the later translations. However, as it was the first attempt at translation into this difficult language, we must not expect too much from it as a source of knowledge of the language.

respective sexes. But this does not prove that the suffix, which now indicates the gender, had not originally quite a different meaning. In fact, in many masculine nouns in Hottentot there is no doubt that the suffix of the masculine singular has a sort of local meaning, and this meaning seems also to influence the character of this gender, even in some of the most advanced Sex-denoting languages. For example, in Latin, *diē-s* (French "jour") m. s., and *diē-s* (French "journée") f. s. differ from each other almost in the same manner as the corresponding Hottentot nouns *tsē-p* m. s. "day as date," and *tsē-s* f. s. "day as a period."

544. The division of the nouns into classes in Hottentot is radically based upon the same principle as in the Bantu languages; but the present state of the Hottentot language shews that the power of analogy has been far more actively exercised in it. This power of analogy has been chiefly brought to bear upon the correspondences of singular, plural, and dual classes. It is not impossible that one or two of the derivative suffixes of the nouns in Hottentot may originally have had a sex-denoting meaning, or a meaning which at least predisposed them to indicate difference of sex,—yet it would be absurd to suppose that all of the eight concord-indicating derivative suffixes of nouns in the Hottentot language (or even the majority of them) can have originally denoted those distinctions of sex which they now impart to nouns indicating beings in which this distinction can be naturally observed. When the idea of so profound a natural distinction as that of sex (with its soul-stirring associations) was once clearly imparted to the grammatical division of the nouns into classes, it must have had the tendency of bringing this classification more and more into harmony with itself. It must have developed the power of analogy, thereby placing the correspondences between singular, plural, and dual classes upon a more regular footing, and attaching to every one of the classes a distinct logical meaning. This same tendency, in the English language, has expelled

from the two sex-denoting genders (or classes) almost all nouns representing things or ideas in which sex cannot be distinguished, and has thus obliterated in English those perplexing features of the Sex-denoting languages, which are still so clearly visible in its German cousins. It is this same tendency towards a coincidence of logical and grammatical classification, which, in the first instance, after the distinction of sex had been introduced, made the whole world appear as if divided by sexual distinctions.

545. But it is not necessary, nor even probable, that the original meaning of any of the concord-indicating derivative suffixes of nouns in the Hottentot language implied a distinction of sex. To assume, for example, that the suffix of the masculine singular (-p) had originally the meaning of "man," or the feminine singular (-s) that of "woman," would in no way explain the peculiar division of the nouns into classes, as we find it in Hottentot, and would be opposed to all that is probable regarding the etymology of these suffixes, and also to the fact that so many nouns are included in the sex-denoting classes to which the distinction of sex can only by great force be applied. On the contrary, it is probable that the idea of sex was at first as little implied in any of the Hottentot derivative suffixes, as the idea of "tree" or "river" in the 3rd Bantu prefix, although the latter prefix now appears to impart to many nouns one of these two ideas. (§§ 427 & 428.) As the idea of "tree" or "plant" was probably grafted upon this prefix by the process of forming nouns in analogy with MU-TI 3., in like manner the idea of masculine or feminine gender may have been imparted to Hottentot suffixes which had no such meaning originally. If the word for "man" were formed with one suffix (-p), and the word indicating "woman" (be it accidentally or not) by another (-s), then other nouns would be formed with the same suffixes, in analogy with these, until the majority of the nouns of each sex were formed with certain suffixes which would thus assume a sex-denoting character.

This has been carried so far in Hottentot, by the power of analogy, that (as far as we know) no noun indicating a female being now belongs to the masculine class or gender, —an apparent anomaly which is still to be met with in GAELIC,* if I may trust to A. Stewart's "Elements of Galic Grammar," 1801, p. 46. But a neuter gender (*i.e.* a class which comprehends nouns to which the distinctions of sex do not apply) had not yet been brought into existence; and the neuter nouns were still in the same classes with those in which sex could be naturally distinguished. The classes of the nouns in Hottentot thus possessed no naturally inherent sex-denoting character, but were (so to speak) merely coloured by a sex-denoting dye, which has only thoroughly pervaded the nature of the classes in the most advanced of our Sex-denoting languages.

THE NAMA DIALECT.

546. The NAMA dialect possesses the best preserved forms of the concord-indicating derivative suffixes of the nouns, and also contains a greater number of genders (or classes) of nouns than any other Hottentot dialect. The common singular (-1) gender (or class) is only met with in Nama, or, at least, has only been proved to exist in this dialect. We frequently find some of the forms of the masculine singular suffix confounded with this common singular suffix (-1). The original form of the suffix of the masculine singular appears to have been -BI; but it is rarely met with in this form,† even in Nama, excepting as

* We must remember that in German student slang the most usual term by which a woman is indicated is also a masculine word.

† In the sentences o-p ge |gīri-**bi** ge tē-he "then he was questioned by the jackal," and ani-p ge goma |gīri-**bi** ge |kuri-he "the cock was once, it is said, overtaken by the jackal" (Krönlein's *M.S.* in the Grey Library, p. 29), the -**bi** of |gīri-**bi** "jackal" appears to be the full form of the suffix retained for the purpose of indicating the causal case. In like manner, the ancient form of the suffix of the feminine singular (-**si**) appears to be retained in the same circumstances. Thus we find, on the same page, o-p ge ≠hira-**si** ge |analgā-he "then he was accused by the

an objective pronoun (-bi) after the verb. After vowel stems the suffix always loses its own vowel, but retains, in Nama, the labial explosive consonant,—which is either -b or -p, according to its position at the beginning or end of a syllable. This derivative suffix is -b when (“anlautend”) it combines with a following vowel (-a, in the so-called objective case), and thus begins a separate syllable; but it is -p when the suffix (“auslautend”) terminates a syllable.* If, however, the stem ends in a consonant (nasal *m* or *n*, or liquid *r*) the vowel of the masculine singular suffix remains, whilst the consonant of the suffix is either assimilated to the ending consonant of the stem, or elided after it.† Thus -mī, -nī, and -ī are only modified forms of the masculine singular suffix -BI,—and, in their peculiar positions, equivalent to, and etymologically identical with, the forms -b or -p. (§ 423.) No other concord-indicating suffix in Nama undergoes any change through the influence of the stem, excepting that the suffix of the common plural (-n) may adopt a vowel before the nasal (as -in) when following a stem which ends with a consonant. The suffix of the masculine plural which is -ku, according to Schmelen, Knudsen, and Tindall, is by Vollmer and Krönlein written -gu. I am inclined to consider the

hyena.” It may, however, be that the *i*, in which in these cases the suffixes end, is not part of the original derivative suffix, but identical with the substantive particle, which we observe in the !Kora forms *kuee-b-i* m. s. “he is a man,” *kuee-ku-i* m. pl. “they are men,” *kuee-m-a-i* com. pl. obj. “they are people.” (Appleyard, pp. 21 and 22.) The use of the substantive particle for the formation of a sort of causal case would be analogous to the way in which the Setshuāna particle *hi* (and the corresponding so-called causal form in Kafir, § 462) is employed after passive verbs.

* This is Schmelen’s and Tindall’s orthography, which we believe to be the correct one upon this point. The Rhenish missionaries write -b in both cases. Schmelen frequently gives -p b-a as the objective form of the masculine singular.

† Schmelen and Knudsen assimilate the consonant of this suffix to an *m* ending the stem, while more modern authors appear to elide it.

former orthography as the better one, although in the examples given in §§ 421—424 and § 444 I have followed the other.

547. Besides the simple forms of the suffixes, we have those with the suffixed particle *-a*, which, in Nama, always coalesces with the concord-indicating derivative suffix. When the vowel of the derivative suffix is an *a*, the suffixed *-a* combines with this and forms one vowel only. The same is the case with regard to the vowel *i*, in the suffix of the feminine plural (*-ti*) and in that of the common singular (*-i*). The *i* sound in these two suffixes is changed, by vowel harmony, through the influence of the *a* into an *-e* (the suffixed *-a* being itself absorbed by the vowel *-e*),—and *-te* and *-e* are thus the modified forms of these suffixes. The vowel *u* of the suffix of the masculine plural (*-ku*) and the *i* of some forms of the masculine singular (*-mi*, *-ni*, and *-i*) are not treated in this manner, but are simply elided before the suffixed *-a* (as *-k-a* masc. plur., *-m-a*, *-n-a*, and *-a* masc. sing.).

548. In this form with the suffixed *-a* two principal meanings are to be discerned. Firstly, it is always used whenever a noun is in the accusative or objective case; and on this account we call it the *objective form*, although the title refers only to one portion of its meaning. Secondly, the *-a* appears also to possess the value of a relative particle, which refers the noun or adjective to an antecedent pronoun or noun, and thus gives it the character of an apposition.

!nū-p-ei-p ge |giri-b-a ge lawa “then he, the jackal, ascended;”

o-p ge xam-m-a ge mī “then he, the lion, said;”

o-s ge khoi-s-a ge ||nū “then she, the woman, fell.”

Whether the objective and also the appositional or relative value are to be derived from one original meaning, or whether two primarily different suffixes have by homophony been thrown into one, is, as yet, uncertain. As it now stands, the twofold meaning of this form is frequently

perplexing and confusing, where identity of class (or gender) exists between a subjective pronoun and an objective noun following it. In the sentence

o-p-ge /au-b-a /hu-b-a ra nā //ga "then he, the serpent, the white man did bite want" (then the serpent wanted to bite the white man),

both nouns are formed with this suffixed *-a*, although the one only as the object of the verb, and the other as in apposition to the subjective pronoun; but if either */au-b-a* or */hu-b-a* were omitted, the context alone could shew in what sense (as objective, or in apposition) the remaining form with *-a* was used.

549. The form with the suffixed *-a*, besides indicating either the object or an apposition, is also used merely as a variation of the form without *-a*, before certain suffixed directives (or postpositions). Euphony alone appears to decide that, for example, the postposition *-xu* "from" is generally preceded by the form with the suffixed *-a*,—whilst *-xa* "by," *-/na* "in," and most other postpositions usually accompany the form of the noun without the suffixed *-a*. The employment of this suffixed *-a* is thus similar to that of the Kafir article, which is now more dependent upon usage and euphony than on any logical requirement. (§§ 463 and 464.) On this account I once named the form with *-a* the "definite form" of Hottentot nouns. (De Nominum Generibus, p. 40.) But the fact that the objective or accusative case of nouns in Hottentot is never found without this suffixed *-a*, renders the term "objective" the most convenient name for this form, although it does not convey its whole force and meaning. A comparison of this Hottentot objective form with the Ethiopic and Arabic termination *-a*, for the accusative of nouns, naturally suggests itself,—always supposing that these languages stand sufficiently near, grammatically speaking, to the Hottentot, to admit of such a comparison. In some ways, we are also reminded of the termination *-a* of the so-called "status emphaticus" of Aramaic nouns,

which is also said to be met with in the Assyrian language,—and may, or may not, be identical in origin with the accusative termination in Arabic and Ethiopic.

550. With regard to the Hottentot objective form in *-a*, it is, however, to be remarked that the *-a* is by no means inseparably connected with the derivative suffix of the noun, but, on the contrary, always stands after whatever may follow the noun to define it. *E.g.*, when a so-called possessive pronoun is suffixed to the noun, the *-a* stands after the pronoun, combining with it in the same manner as in other positions with the derivative suffix of the noun.

tara-s f. s. "wife," obj. *tara-s-a*,—*tara-s* *ā-p* "his wife," obj. *tara-s* *ā-b-a*;

tara-ti f. pl. "wives," obj. *tara-te*,—*tara-ti* *ā-p* "his wives," obj. *tara-ti* *ā-b-a*;

goma-n comm. pl. "cattle," obj. *goma-n-a*,—*goma-n* *ā-ti* "their (the women's) cattle," obj. *goma-n* *ā-te*;

tana-ti f. pl. "heads," obj. *tana-te*,—*tana-ti* *ā-ku* "their (the men's) heads," obj. *tana-ti* *ā-k-a*, &c.

Or, when two or more nouns, very closely connected by the conjunction *tsi* "and," are in syntactical positions requiring the *-a* form, the various terminations of the nouns do not themselves adopt the particle *-a*, but it is affixed to the pronoun which, following the conjunction *tsi*, represents all the preceding nouns. In the sentence *tsi lgui gama-s tsi lgui gu-s tsi lgui beri-s tsi-n-a xú-ba-bi* "and (she, the woman) one cow and one sheep and one goat and-them left-for-him" (and she left one cow, one sheep, and one goat for him), *gama-s* "cow," *gu-s* "sheep," and *beri-s* "goat," are not given in the objective form, although used in an objective sense, and the common singular pronoun *-n* (employed here instead of the feminine plural, because the sex is a matter of indifference) is followed by the objective particle *-a*, instead of the latter being suffixed to each of the different nouns to which the pronoun refers.

551. The non-existence of a feminine dual suffix in Nama causes the suffix of the common dual (-*ra*) to be used wherever a feminine dual is required. Upon the whole, the common genders (or classes) are not unfrequently used in place of the sex-indicating ones, in cases where the sex of the noun is a matter of indifference. Thus the common plural suffix (-*n*), especially, is frequently used in correspondence with the masculine singular (-*p*), or the feminine singular (-*s*) suffix. For example, nouns indicating animals which (like our "dog" and "cat") generally belong in the singular to one of the sex-indicating genders (masculine or feminine) even when used without any reference to sex, have often a corresponding plural suffix of the common gender. Also names of other things, in which no distinction of sex is naturally present, sometimes have the common plural corresponding to a masculine or feminine singular. That the masculine singular (-*p*) gender is particularly inclined to this correspondence with the common plural (-*n*) deserves to be noticed; for, the same correspondence will also be found in some kindred languages. For the same reason, it is important to remark that the feminine singular suffix in Nama may also have a collective meaning. For instance, *gu-s* f. s. may simply mean "ewe," or, as collective, "flock of sheep" = *gu-lhau-s* f. s.

552. The following tables will illustrate two ways in which the correspondence of the Nama derivative suffixes (and genders or classes) of nouns may be viewed. The Nama nouns have generally been transcribed according to the System of Lepsius; but the pronunciation of most of the nouns in the other Hottentot dialects is too imperfectly indicated to render such a transcription feasible. The !Kora, Cape, and Eastern nouns in the following lists, are, therefore, spelt as they appear in the vocabularies or texts furnished by the respective authorities, whose names are always appended.

NAMA DERIVATIVE SUFFIXES OF NOUNS.

THE !KORA DIALECT.

553. The forms of the concord-indicating suffixes of the nouns in the !KORA dialect are essentially the same as in Nama. The suffix of the !Kora masculine dual (Nama **-kha**) is written **-ka** by Wuras; but as Schmelen has the same spelling for it in Nama, it is possible that the !Kora and Nama pronunciations of this suffix do not materially differ. The vowel termination of the !Kora feminine plural suffix **-tē** (or **-dē**) agrees more nearly with the objective form of this suffix in Nama (**-te**), than with the Nama form without the **-a** (**-tl**). No double form of this suffix is given by the !Kora grammarian Wuras; but as the Nama grammarian Tindall has also not noticed the fine distinction between the vowel sounds of these two forms (so clearly laid down by the Rhenish Missionaries Knudsen and Krönlein), it is not impossible that the !Kora dialect may also possess such double forms with their different shades of meaning. The other objective forms of the suffixes are exactly the same as in Nama, with this exception, that the masculine plural suffix **-ku** retains its *u* before the objective particle (**-a**) in !Kora as well as in the Cape and Eastern dialects. The common singular (**-l**) gender or class of nouns has, as yet, been found in the Nama dialect only; and appears, at all events, to be unknown in !Kora. The common dual suffix **-ra** is given by Wuras as suffixed to the objective form of the feminine singular, as *kuee-s-a-ra* "two women." (Appleyard, p. 18.) As yet, we have met with no precisely analogous formation in Nama; but, in one instance, the masculine dual suffix (**-kha**) appears to be affixed to the form of the masculine plural (**-ku**), viz. Nama *!kā-ku-kha* m. dual, "two brothers."

554. The derivative suffix of the masculine singular is the same in the !Kora dialect as in Nama, viz. **-p** or **-b**, with its variety **-mi** after stems ending in *m* (as !Kora *'hum-mi* Wur. = Nama *!hom-mi* m. s. "heaven"), &c.

We must, however, except those cases in which the *m* ending the stem appears not to be a full nasal consonant, but merely an indication of that nasal pronunciation of the syllable which we have marked in Nama, according to the system of Lepsius, by a Greek circumflex $\bar{\cdot}$ over the vowel. In !Kora this nasalization appears, in the masculine singular and in the feminine singular, in the substantial shape of a nasal preceding the consonant in which the syllable terminates. The ending nasal adapts itself in these cases to the nature of the consonant of the suffix, being *n* or *ɲ* before the *-s* of the feminine singular, and *m* before the *-p* of the masculine singular. But the *-p* of the latter suffix is most generally elided after this *m* (which represents the nasalization of the syllable which it terminates), and the nouns thus frequently appear without derivative suffix; for example,

!ʰhaam Licht. (= Nama */kã-p̃*) m. s. "brother,"

!ʰhaan-s Licht. (= Nama */kã-s̃*) f. s. "sister."

In the plural and dual forms of these nouns, the nasalization has not been marked at all by WURAS in the only examples of them which he has given:

mum-p (*muhm* Licht. = Nama *mũ-p̃*) m. s. "eye,"

mu-ku (Nama *mũ-ku*) m. pl. "eyes,"

mu-ka (Nama *mu-kha*) m. dual "two eyes."

555. The scantiness of our materials for a knowledge of the !Kora dialect, obliges us to make use of all that is accessible to us, and to place nouns supplied by BORCHERDS, BURCHELL, and LICHTENSTEIN, side by side with the very few that are given by WURAS, in his grammatical sketch (Appleyard pp. 17—26) and in his short Catechism, a manuscript revision of which is in Sir George Grey's Library. (No. 21d.) We should be in a very different position, if Wuras' "Vocabulary of the !Korana language" (a manuscript of 32 pages, with double columns, containing an English-!Kora vocabulary of more than 1700 words), presented by the author to Sir George Grey, had been accessible to us. Probably

in that case it would also have been feasible to adopt one uniform orthography* for !Kora; but it has now been deemed safer to allow the different authorities to spell their nouns in their own fashion, and we have not even tried to reconcile the Wuras of the Grammar, who uses the letters *f* (//), *y* (/), *q* (!), and *v* (≠) to designate the clicks, with the Wuras of the Catechism, who expresses them by the signs \wedge (/), \sqcap (/), \cap (!) and \neg (≠).

Schm. m. s.).

THE CAPE DIALECT.

556. The forms of the derivative suffixes of nouns in the Hottentot dialect spoken at the Cape of Good Hope nearly two hundred years ago, agree, as far as we can ascertain them, almost entirely with those in the !Kora dialect. The masculine plural, especially, has the same uncontracted objective form **-kw-a** (spelt **-qu-a** in the vocabularies) as in !Kora. The feminine plural suffix **-die** stands nearest to the **-dee** (i.e. **-dē**) which we occasionally find in !Kora. The masculine singular also, after stems which end in *m*, has the same form (**-mi**) as in Nama and !Kora (with an occasional slight variation **-me** in the Cape dialect only) and **-m-a** in the objective. This is the only instance in which we have been able to ascertain the existence of double forms (with and without suffixed **-a**) in the Cape dialect; and, generally speaking, the materials for this dialect are so scanty that it is much if we succeed in ascertaining even one form of each suffix. No dual suffixes have as yet been discovered in our specimens of this dialect, but this is, of course, no proof of their non-existence.

557. The only remarkable exception to the similarity of the suffixes in the Cape and !Kora dialects is that the suffix of the masculine singular, when following a vowel, has fallen off in the Cape dialect, in all but a few cases. In the first instance, the original **-b** of this suffix appears to have been pronounced softly, like *v*, or German *w* (as it so frequently is in Nama, especially by the Orlams), and in the rare cases above alluded to in the Cape dialect the nouns of the masculine singular have still retained their derivative suffix in this softened form, as **-w** or **-bβ**.*

* What the latter curious letter is really intended to indicate is not quite clear to us, but it may have been merely meant for a double *v* (**-v v**), the old sign for *w*.

t kau-w (Lud. a) m. s. "hippopotamus;"

choassou-w Lud. b or *t gwassou* Lud. a (!Kora *choas-au-b* Licht.) m. s. "leopard, tiger;"

tAu-ḡḡ Lud. b (Nama and !Kora */kau-p* or */kau-b*) m. s. "buffalo;"

k'ou-ḡḡ (Lud. b) m. s. "musk cat."

But all other masculine singular nouns with vowel stems, that occur in the vocabularies and texts which constitute the material for our knowledge of the Cape dialect, are destitute of any vestige of the derivative suffix. A more partial apocope of this suffix has been observed in !Kora, where it generally disappears after nasalized syllables. There are some other instances in Nama and !Kora, in which the suffixes of nouns of the masculine singular appear to be missing,* but as they are not certain, these cases have not been noticed in the tables. In Sparrmann's vocabulary, no masculine singular noun with a vowel stem retains any trace of the suffix, while Thunberg generally gives the suffix *-p*. The labial nature of the masculine singular suffix in Hottentot has evidently given it a

* Nama *≠ēn* (Vollmer) "hollow of the hand" (*≠ēn-kha* m. dual) and */ua* (Cape *ta* Lud. a) are probably nouns of the masculine singular. Lichtenstein ends several !Kora nouns with *h*,— which may, or may not, be a misprint for *b*.

natural tendency to disappear,—and, therefore, we must not wonder that, in comparing the more developed Sex-denoting languages, we find that they have very frequently entirely thrown off this concord-indicating derivative suffix, whilst retaining the more tenacious one of the feminine singular.

CAPE HOTTENTOT NOUNS.

k'o-s Leibn. or *ko-s* Lud. b (Nama *!hō-s* Tind. or *!gō-s* Krönl., !Kora *!ʰo-s* Licht. or *!ʰoo-s* Wuras, Eastern *!go-s* Sparrm.) f. s. "girl, daughter;" *kobo-s* Leibn. (Nama *khobo-s*) f. s. "maid-servant;"

quie-s Leibn. (Nama *!hloi-s* or *!koi-s*, !Kora *!kuee-s* Wur.) f. s. "woman, wife,"—*k'qui qui-s* Lud. b (Nama *!hui k'hoi-s*) f. s. "one woman;"

traqueo-sh Herbert or *drako-s* Krönlein† (!Kora *kalakwee-s* Borch., Hill Damara *tara-k'hoi-s*) f. s. "woman" (Eastern *traköfi* [?] Sparrm. "young girl");

* This form may, however, be masc. sing. obj., *oun-a* = Nama *!kunu-b-a*.

† Words given to the Revd. G. Krönlein by an old Hottentot man at Genadendal, in November 1864. He died the following day.

<i>goie-s</i> Lud. a or <i>hoo-s</i> Lud. b (Eastern <i>t'gōö-s</i> Sparrm. or <i>Gó-s</i> Thunb.) f. s. "cow" (Nama <i>//gō-p</i> m. s. "bull");	Eastern <i>t'gu-ku</i> Sparrm. = Nama <i>gu-ku</i> m. pl.,—!Kora <i>ku-n-a</i> Wuras, Eastern <i>Go-n-a</i> Thunb. = Nama <i>gu-n-a</i> c. pl. o.);
<i>gou-die</i> Lud. a or <i>hoe-die</i> Lud. b (Nama <i>gu-ti</i>) f. pl. "sheep" (!Kora <i>ku-s</i> W., Nama <i>gu-s</i> , Eastern <i>t'gu-s</i> Sparrm. f. s.,— !Kora <i>t'guh-b</i> Licht. or <i>ku-p</i> Wuras = Nama <i>gu-p</i> m. s.,	<i>chau-n-a</i> Lud. b (Nama <i>//khau- n-a</i>) com. pl. obj. "lambs" (Nama <i>//khau-p</i> m. s., <i>//khau-s</i> f. s.).

REVIEW OF THE DERIVATIVE SUFFIXES OF THE NOUNS.

558. The fewness of the concord-indicating derivative suffixes of nouns in Hottentot, and the close resemblance which their forms present in the different dialects, enables us to compress a review of the different forms into one page. What little we had to say regarding the etymology, force, and meaning of these suffixes, and their mutual correspondences, has been given in §§ 424, 444, 447, 543—545, 551 & 553, and it would, therefore, be needless to repeat it here. When the study of Hottentot has received that attention which the position of this language merits, this chapter of South African Comparative Grammar promises to be particularly rich in observations on nice distinctions which will be of great importance to general philology.

REVIEW OF THE CONCORD-INDICATING DERIVATIVE SUFFIXES OF HOTTENTOT NOUNS.

Hottentot Derivative Suffixes of Nouns,		NAMA DIALECT.		!KORA DIALECT.		CAPE DIALECT.		OLD FORMS.
		Without suffixed -a.	With suffixed -a.	Without -a.	With -a.	Without -a.	With -a.	
MASCULINE.	{ after pure vowels	{ -p, -b (?-bl) }	-b-a	-p, -b	-b-a	-bō, -w (f)	(-)	{ -BI }
	" nasalization		-mi	(-), -p				
	" m		-mi	-m-a	-ml, -me	-m-a		
	" n		-ni	-n-a		-n-a		
	" r	-ri	-r-a					
PLURAL.	-ku (-gu)	-k-a (-g-a)	-ku	-ku-a (kō-a)				-KU
DUAL.	-kha		-ka					-KHA
FEMININE.	SINGULAR.	-s (-sl ?)	-s-a	-s	-s-a (-ss-a)	-s (-sh)		-S(I)
	PLURAL.	-ti	-te		-tē (-dē)	-die		-TI
	DUAL.				-s-a-ra			
COMMON.	SINGULAR.	-i	-e					-I
	PLURAL.	-n, -in	-n-a, -in-a	-n	-n-a		-n-a	-IN
	DUAL.		-ra					-RA

It would, in some ways, have been convenient here, to give a comparison between the concord-indicating signs of gender in Hottentot, and those of the kindred Sex-denoting languages. But, in many of the latter languages, these signs of gender have either wholly or partly disappeared from their position as derivative suffixes, and can now only be recognised in the other forms of concord; and this comparison will, therefore, be more appropriately given at the end of the Second Part.
